

CONTENTS

INTRODUCTION	1
1 PRELIMINARIES	8
1.1 Elementary principles of phase-contrast microscopy	9
1.2 Instrumental requirements and modifications for high-resolution work	18
1.3 First experiments	24
2 ELECTRON OPTICS	28
2.1 The electron wavelength, refractive index, and relativity	29
2.2 Simple lens properties	32
2.3 The paraxial ray equation	40
2.3 The constant-field approximation	42
2.5 Projector lenses	44
2.6 The objective lens	48
2.7 Practical lens design	50
2.8 Aberrations	56
2.9 The pre-field	65
2.10 Summary	66
3 WAVE OPTICS	70
3.1 Propagation and Fresnel diffraction	72
3.2 Lens action and the diffraction limit	75
3.3 Wave and ray aberrations	81
3.4 Strong- and weak-phase objects	85
3.5 The optical bench	88
3.6 Summary	91
4 COHERENCE	93
4.1 Independent electrons and computed images	96
4.2 Coherent and incoherent images and the damping envelopes	97
4.3 The characterization of coherence	104
4.4 Spatial coherence using hollow-cone illumination	108

4.5	The effect of source size on coherence	111
4.6	Coherence requirements in practice	113
4.7	Summary	118
5	HIGH-RESOLUTION IMAGES OF PERIODIC SPECIMENS	121
5.1	The effect of lens aberrations on simple lattice fringes	122
5.2	The effect of beam divergence on depth of field for simple fringes	128
5.3	Approximations for the diffracted amplitudes	130
5.4	Many-beam structure images	136
5.5	Dynamical calculations and the relationship between computing algorithms	143
5.6	Image interpretation in germanium—a case study	148
5.7	Images of defects in crystalline solids	155
5.8	Experimental aspects of many-beam lattice images	165
5.9	Applications of lattice imaging	177
5.10	Lattice imaging in STEM	177
5.11	Summary	187
6	NON-PERIODIC SPECIMENS	192
6.1	Phase and amplitude contrast	193
6.2	Single atoms in bright field	197
6.3	The use of higher accelerating voltage	208
6.4	Contrast and atomic number	213
6.5	Dark-field methods	216
6.6	Inelastic scattering	220
6.7	Image simulation	226
6.8	Noise and information	230
6.9	Minimum exposure microscopy	234
6.10	Summary	238
7	ELECTRON SOURCES AND THE ILLUMINATION SYSTEM	245
7.1	The illumination system	246
7.2	Brightness and its measurement	248
7.3	Biasing and high-voltage stability	252
7.4	Hair-pin filaments	257

7.5	Pointed filaments	258
7.6	Lanthanum hexaboride sources	262
7.7	Field-emission sources	262
8	MEASUREMENT OF ELECTRON- OPTICAL PARAMETERS AFFECTING HIGH-RESOLUTION IMAGES	266
8.1	Objective lens focus increments	266
8.2	Spherical aberration constant	269
8.3	Magnification calibration	272
8.4	Objective lens current measurement	275
8.5	Chromatic aberration constant	275
8.6	Astigmatic difference	277
8.7	Optical diffractometer measurements	278
8.8	Transverse coherence width	284
8.9	Electron wavelength and camera length	288
8.10	Resolution	289
9	INSTABILITIES	297
9.1	Magnetic fields	297
9.2	High-voltage instability	300
9.3	Vibration	302
9.4	Specimen movement	303
9.5	Contamination and the vacuum system	306
10	EXPERIMENTAL METHODS	309
10.1	Astigmatism correction	310
10.2	Taking the picture	311
10.3	Finding and recording lattice fringes—an ex- ample	315
10.4	Adjusting the crystal orientation using non- eucentric specimen holders	326
10.5	Focusing techniques	330
10.6	Substrate films	333
10.7	Photographic techniques and micrograph ex- amination	336
10.8	Emulsions for high-resolution CTEM	341
10.9	Ancillary instrumentation for high-resolution CTEM work	342
10.10	A checklist for high-resolution work	344

APPENDIX 1 A Fortran program for finding defocus and spherical aberration constants from measured optical diffractogram ring radii	347
APPENDIX 2 Use of an absorption function to represent the objective aperture effect	353
APPENDIX 3 Resolution limiting factors and their wavelength dependence	354
APPENDIX 4 What is a structure image?	362
INDEX	363
