## PART I. STATIC ELECTRON OPTICS

### I The Variational Equation

<b>1.1</b>	Introduction	1
<b>1.2</b>	Electron-optical units	3
<b>1.3</b>	Derivation of the variational equation	6
<b>1.4</b>	The electrostatic lens	10
<b>1.5</b>	The magnetic lens	18

### II Classical Geometrical Optics

<b>2.1</b>	Introduction	24
<b>2.2</b>	Hamilton's characteristic functions	25
<b>2.3</b>	The Lagrange invariant	30
<b>2.4</b>	Perturbation characteristic functions	34
<b>2.5</b>	The reciprocal and imaging relations	39
<b>2.6</b>	Normal congruences	47
<b>2.7</b>	The Hamilton-Jacobi equation	53

### III Instrumental Electron Optics

<b>3.1</b>	Introduction	61
<b>3.2</b>	Curvilinear co-ordinates	62
<b>3.3</b>	The paraxial approximation	65
<b>3.4</b>	Gaussian dioptrics	72
<b>3.5</b>	Perturbation characteristic functions	81

## IV The Rotationally Symmetrical System

4.1	Introduction	<i>page</i> 91
4.2	The paraxial imaging properties	92
4.3	Third-order aberrations	95
4.4	Chromatic aberration and the relativistic correction	108
4.5	Space charge and space current	113
4.6	Asymmetries of electron lenses	118

## V Systems of Mirror Symmetry

5.1	Introduction	123
5.2	The variational functions	125
5.3	The aberration characteristic functions	128
5.4	$\beta$ -ray spectrographs	130
5.5	Mass spectrographs	137
5.6	Cathode-ray-tube deflectors	140

## PART II. DYNAMIC ELECTRON OPTICS

## VI Uniform Focusing in Particle Accelerators

6.1	Introduction	148
6.2	The variational equation	151
6.3	The adiabatic invariants	159
6.4	The synchrotron	166
6.5	Perturbation calculations	172
6.6	The linear electron accelerator	179

## VII Periodic Focusing in Particle Accelerators

7.1	Introduction	<i>page</i> 186
7.2	The paraxial theory	189
7.3	The adiabatic invariants	196
7.4	Perturbation calculations by variation of parameters	202
7.5	Perturbation calculations by matrix methods	205
7.6	The diagonal representation	211
7.7	Instability due to linear coupling	215
7.8	The strong-focusing synchrotron	220
7.9	Non-linear effects	225
