

# CONTENTS

Preface . . . . .	vi
List of the Most Important Symbols . . . . .	xii
1. INTRODUCTION . . . . .	1
1.1. Basic Optical Conceptions . . . . .	1
1.2. Laws of Reflection and Refraction . . . . .	4
1.3. Dispersion of Light . . . . .	5
2. THE REFLECTION AND REFRACTION OF LIGHT ON A BOUNDARY BETWEEN TWO AND MORE DIELECTRICS. . . . .	9
2.1. Maxwell's Equations for Electromagnetic Waves in an Isotropic Dielectric . . . . .	9
2.2. A Simple Scalar and Vector Harmonic Wave. The Introduction of Complex Numbers into the Calculations . . . . .	15
2.3. Plane Polarized Light . . . . .	16
2.4. Elliptically and Circularly Polarized Light . . . . .	19
2.5. Unpolarized (Natural) Light . . . . .	26
2.6. The Reflection and Refraction of Light on a Boundary Between Two Isotropic Dielectrics. Fresnel's Formulae . . . . .	26
2.7. Fresnel's Formulae for the Ratio of the Amplitudes of the Com- ponents of Magnetic Field Strength . . . . .	32
2.8. Different Mathematical Formulations of Fresnel's Formulae . . . .	36
2.9. The Intensity of Reflected and Refracted Light at a Boundary Between Two Dielectrics . . . . .	37
2.10. The Intensity of Natural Light Reflected and Refracted by a Boundary between Two Dielectrics . . . . .	41
2.11. The Relation Between Fresnel's Formulae for the Reflection and Refraction of Light at a Boundary if Light Passes in One or the Other Direction . . . . .	42
2.12. Analysis of Fresnel's Formulae for the Reflection and Refraction of Light . . . . .	45
a) Fresnel's Amplitudes for the Reflection of Light . . . . .	45
b) The Intensity of Reflected Light and Reflectivity . . . . .	48
c) Fresnel's Amplitudes for the Refraction of Light and the In- tensity of Refracted Light . . . . .	51
d) Transmissivity . . . . .	54
2.13. The Reflection and Refraction of Light at Several Refracting Surfaces	56
3. THE REFLECTION AND REFRACTION OF LIGHT BY ONE FILM . . . . .	60
3.1. A Thin and a Thick Film . . . . .	60
3.2. The Reflectivity and Transmissivity of a Thick Homogeneous Film on Glass . . . . .	63
3.3. The Condition for the Least Reflectivity of Glass with a Thick Film	65
3.4. The Reflection of Light at Several Refracting Surfaces for Multiple Reflections of Light in the Film. Stray Light. . . . .	68
3.5. The Reflection and Transmission of Light by a Thick Homogeneous Film, if the Light Passes in One or the Other Direction. The Re- flection and Transmission of Light by Several Diffusion Films . .	72

3.6.	Reflection of Light from Glass having a Thick Non-homogeneous Film	75
3.7.	Calculating with Complex Quantities in Optics . . . . .	76
3.8.	Superposition of Vibrations in Symbolics of Complex Numbers . .	77
3.9.	Reflection and Refraction of Light by a Homogeneous Thin Film: The Försterling Solution from Boundary Conditions According to the Maxwell Theory . . . . .	79
3.10.	Generalization of Försterling's Solution from Boundary Conditions According to Maxwell's Theory . . . . .	86
3.11.	Drude's Theory of the Reflection of Light by So-called Transitional Films . . . . .	92
3.12.	Solution of the Reflection and Refraction of Light by a Thin Film by the Superposition of Amplitudes . . . . .	98
	a) Derivation of Equations for Reflection of Light from Thin Plane Parallel Film as Sum of Amplitudes . . . . .	101
	b) Derivation of Equations for Light Transmitted by Thin Film on Glass by Superposing Amplitudes . . . . .	105
3.13.	Comparison of Equations for Light Reflected and Transmitted by a Thick and a Thin Homogeneous Film . . . . .	107
3.14.	Resultant Amplitudes and Phases of Both Components of Light Reflected and Transmitted by a Thin Film . . . . .	108
3.15.	The Intensity of Light Reflected or Transmitted by a Thin Film	111
3.16.	Graphic Determination of Resultant Amplitude and Resultant Phase of Both Components of Light Reflected by a Thin Film . .	113
3.17.	Extreme Values in the Reflection and Transmission of Light by a Thin Film . . . . .	115
3.18.	Normal Incidence of Monochromatic Light on Glass with a Thin Film. Reflectivity and Transmissivity of Glass with a Thin Film	122
3.19.	Reflection and Refraction of White Light by Glass with a Thin Film . . . . .	132
3.20.	The Connection Between Thin and Thick Films . . . . .	139
3.21.	Fourier Series when Studying the Reflection and Refraction of Light by a Thin Transparent Film . . . . .	143
3.22.	Interference Filter . . . . .	144
3.23.	Reflection of Light from Glass with Thin Non-homogeneous Film	150
4.	THE REFLECTION AND REFRACTION OF LIGHT FROM TWO AND MORE THIN FILMS . . . . .	159
4.1.	Generalization of Formulae for Reflection of Light at One Film for Two and More Thin Films . . . . .	159
4.2.	Reflection and Refraction of Light by Two Thin Films on Glass	164
4.3.	The Connection Between Rouard's and the Author's Methods with a General Equation for the Reflection and Transmission of Light by a Thin Transparent Film . . . . .	170
4.4.	Special Cases of the Reflection of Light from Glass with Two Thin Films for Normal Incidence . . . . .	174
4.5.	Reflection of Light from a System of $k$ Thin Films . . . . .	177
	a) Generalization of Rouard's Method . . . . .	179
	b) Generalization of Author's Method . . . . .	181
4.6.	Special Cases of the Reflection of Light from Several Thin Films on Glass . . . . .	185
4.7.	A Thin Non-homogeneous Film as a System of Several Homo- geneous Films . . . . .	188

4.8. The Connection Between the Reflectivities of Several Thin and Thick Films on Glass . . . . .	190
4.9. The Reflection of Light from Several Thin Films for Single Reflection in the Films . . . . .	194
4.10. The Achromatization of Two and Three Thin Films on Glass . . . . .	200
a) Two Thin Films on Glass Surface . . . . .	201
1. The Exact Solution . . . . .	201
2. Approximate Solution . . . . .	210
b) Three Thin Films on Glass . . . . .	215
1. The Exact Solution . . . . .	215
2. Approximate Solution . . . . .	219
4.11. Approximate Solution of Alternating Thin Films on Glass . . . . .	229
4.12. Multiple Thin Films as Interference Reflection Filters . . . . .	234
4.13. Multiple Thin Films as Interference Filters . . . . .	242
4.14. Reflection and Refraction of Light from Several Thin Films from Boundary Conditions According to Maxwell's Theory . . . . .	246
a) Light Reflected from Two Thin Films . . . . .	250
b) Light Transmitted by Two Thin Films . . . . .	252
4.15. Matrix Calculus and the Method of Optical Impedance for Studying Light Reflected from Several Thin Films . . . . .	254
a) Normal Incidence of Light . . . . .	254
1. The Reflection of Light from a Boundary Between Two Dielectrics . . . . .	257
2. The Reflection of Light from a Thin Film on Glass . . . . .	258
I. Method of Optical Impedance . . . . .	258
II. Method of Matrix Calculus . . . . .	259
3. Reflection of Light from Two Thin Films on Glass . . . . .	260
I. Method of Optical Impedance . . . . .	260
II. Method of Matrices . . . . .	261
4. Reflection of Light from Films $\frac{1}{4}\lambda$ . . . . .	266
b) Oblique Incidence of Light . . . . .	268
1. Reflection of Light from Boundary Between Two Dielectrics . . . . .	268
I. Calculation for p Component . . . . .	268
II. Calculation for s Component . . . . .	269
2. Reflection of Light from Dielectric (Glass) with Thin Films . . . . .	270
I. Calculation for p Component . . . . .	270
II. Calculation for s Component . . . . .	272
4.16. Synthesis of System of Thin Films with Given Spectral Transmissivity . . . . .	275
5. THIN DIELECTRIC FILMS ON METAL. THIN METALLIC FILM . . . . .	284
5.1. Maxwell's Equations for Electromagnetic Waves in Metallic Medium . . . . .	284
5.2. Optical Constants of Metal . . . . .	288
5.3. Calculation of Amplitudes $r_p$ and $r_s$ and Phases $\delta_p$ and $\delta_s$ of Light Reflected from Metal . . . . .	293
5.4. Calculation of Poynting Vector for Complex Electric and Magnetic Field Strength . . . . .	298
5.5. Intensity of Light Reflected and Refracted by Boundary Between Dielectric and Metal . . . . .	301

5.6.	Reflection of Light from Metal with One and Several Thin Dielectric Films . . . . .	308
	a) Normal Incidence of Light . . . . .	308
	b) Oblique Incidence of Light . . . . .	311
5.7.	Transmissivity Interference Filter of Turner Type . . . . .	316
5.8.	Reflection Interference Filters . . . . .	319
5.9.	Reflection and Refraction of Light by Thin Metallic Film . . . . .	323
	a) Murmann-Försterling Formulae . . . . .	323
	b) The Author's Formulae for the Reflection and Transmission of Light by a Thin Metallic Film . . . . .	326
	c) Single Reflection and Transmission of Light by a Thin Metallic Film . . . . .	332
	d) Calculation of Amplitudes $r'_p, r'_s, r'$ and the Corresponding Phases $\delta'_p, \delta'_s, \delta'$ . . . . .	333
	e) Calculation of the Amplitudes $r''_p, r''_s, r''$ and Corresponding Phases $\delta''_p, \delta''_s, \delta''$ . Calculation of the Amplitudes $t''_p, t''_s, t''$ . . . . .	334
	1. Calculation according to the Murmann-Försterling Equations . . . . .	335
	2. Calculation According to Author's Formulae . . . . .	337
	3. Calculation for Single Reflection and Transmission of Light by a Thin Metallic Film . . . . .	340
	f) Analysis of Above Equations for Reflectivity of Thin Metallic Film in Limiting Case . . . . .	340
	1. Single Reflection of Light . . . . .	340
	2. Author's Formula . . . . .	341
	3. Murmann-Försterling Formula . . . . .	341
	g) Comparison of Results of Calculating Reflectivity and Transmissivity According to Above Formulae . . . . .	343
	h) Calculation of Reflectivity and Transmissivity from Sum of First Two Terms of Geometric Series . . . . .	347
	i) Calculation of Amplitudes $r_p$ and $r_s$ and Phases $\delta_p$ and $\delta_s$ of Both Components of Light Reflected from a Thin Metallic Film . . . . .	349
	j) Increase in Reflectivity and Transmissivity of Thin Metallic Films with Auxiliary Transparent Films . . . . .	352
	k) Rozenberg's Microtheory of Very Thin Metallic Films . . . . .	354
5.10.	Use of General and Simple Formulae for Reflection of Light from One or More Thin Transparent Films . . . . .	356
5.11.	Cold Mirror with Thin Germanium Films . . . . .	357
5.12.	Thin Film on Glass as Polarizer . . . . .	359
6.	INFLUENCE OF THIN FILMS ON POLARIZATION OF LIGHT AT TOTAL REFLECTION . . . . .	365
6.1.	Total Reflection at Boundary Between Two Dielectrics . . . . .	365
	a) Intensity and Phase of Both Components of Reflected Light for Total Reflection . . . . .	368
	b) Intensity of Refracted Light for Total Reflection . . . . .	372
6.2.	Influence of Thin Film on Glass on Polarization of Light for Total Reflection . . . . .	374
	a) Total Reflection at Boundary Between Film and Air . . . . .	374
	b) Total Reflection at First Boundary Between Glass and Film . . . . .	376
6.3.	Frustrated Total Reflection . . . . .	381
6.4.	Interference Filters with Frustrated Total Reflection . . . . .	383

CONTENTS

XI

7. APPENDICES – CONCLUSION . . . . .	386
7.1. Appendix 1. Sign of Amplitude $r_p$ . . . . .	386
7.2. Appendix 2. Definition of Intensity of Light . . . . .	389
7.3. Appendix 3. Determination of Azimuth $\psi$ . . . . .	389
7.4. Conclusion . . . . .	390
References . . . . .	392
Author Index . . . . .	397
Subject Index . . . . .	399
