I. THE ELEMENTS OF RADIATIVE TRANSFER

by F. KOTTLER
(Rochester, New York)

1. HISTORY OF RADIATIVE TRANSFER	3
2. INTRODUCTION	5
3. FUNDAMENTAL CONCEPTS	7
4. EQUATION OF RADIATIVE TRANSFER	8
5. FORMAL SOLUTION OF THE EQUATION OF RADIATIVE TRANSFER . .	10
6. SCHWARZSCHILD-MILNE INTEGRAL EQUATION	12
7. SCHUSTER-SCHWARZSCHILD APPROXIMATION	12
8. APPROXIMATE COMPUTATION OF THE SOURCE FUNCTION FROM THE TWO SCHUSTER EQUATIONS	14
9. BOUNDARY CONDITIONS FOR UNIFORMLY DIFFUSE INCIDENCE . . .	15
10. SECOND APPROXIMATION	15
11. DISCUSSION	16
12. SPECIAL CASE: COMPARISON OF THE SCHUSTER-SCHWARZSCHILD APPROXIMATION AND THE EXACT SOLUTION OF THE SCHWARZSCHILD- MILNE EQUATION	18
13. RUSSIAN ANALOGY TO THE SCHUSTER-SCHWARZSCHILD APPROXIMATION	21
14. COLLIMATED INCIDENCE	22
15. BOUNDARY CONDITIONS FOR COLLIMATED INCIDENCE	24
16. FORMAL INTEGRATION FOR COLLIMATED INCIDENCE	25
17. CONCLUDING REMARKS	26
REFERENCES	27

II. APODISATION

by P. JACQUINOT and B. ROIZEN-DOSSIER
(Bellevue (S & O) and Nancy, France)

1. INTRODUCTION	31
2. CLASSIFICATION OF CASES AND METHODS	33
2.1 The different cases	33
2.2 The diffraction pattern and the instrumental function . .	35
2.3 Notation and fundamental formulae	38
2.4 Classification of methods for determining apodising functions	48

3.	RESULTS FOR CERTAIN PUPIL FUNCTIONS $\mathcal{F}(x)$ OR $\mathcal{F}(r)$ CHOSEN A PRIORI	49
4.	GENERAL PROPERTIES OF PUPILS WITH NON-UNIFORM TRANSMISSION $\mathcal{F}(x)$ OR $\mathcal{F}(r)$ AND THE ASSOCIATED DIFFRACTION PATTERN $\mathcal{A}(\xi)$ OR $\mathcal{A}(\rho)$	60
	4.1 Impossibility of apodising by a pupil phase plate	60
	4.2 The particular case of rectilinear pupils	61
	4.3 A consequence of the finite extension of the pupil.	61
	4.4 Some important diffraction transform functions	61
	4.5 The integrals of diffracted energy.	61
	4.6 Series expansion of the diffracted amplitude	67
	4.7 Transmission of spatial frequencies by a pupil of non-uniform transmission	69
5.	SYSTEMATIC SEARCH FOR PUPIL FUNCTIONS WITH APODISING PROPERTIES	72
	5.1 Introduction	72
	5.2 A critical review of the different criteria of apodisation which have been proposed	74
	5.3 Practical computation of the best apodising functions according to the different criteria	81
	5.4 Pupil functions which satisfy several conditions.	90
6.	NUMERICAL RESULTS AND DISCUSSION	96
	6.1 Pupil functions of circular symmetry $T(r)$	97
	6.2 Apodisers for pupils $T(r)$ with central obstruction in the ratio $t = d/a$	105
	6.3 Apodisers $T(x)$ for unidimensional pupils	108
7.	THE APODISATION OF ANTENNA BEAMS. A COMPARISON WITH THE CORRESPONDING OPTICAL PROBLEM	112
	7.1 Dolph's method of apodisation	112
	7.2 An optical analogue of an apodisation by an antenna array	117
	7.3 Adaptation of the process of apodisation by a continuous pupil function to the case of an array of antennae	121
8.	MISCELLANEOUS PROBLEMS	122
	8.1 Super-resolution	122
	8.2 Pupil functions which improve the precision of longitudinal focal setting	128
	8.3 Pupil functions which reduce the effects of aberrations on the image	129
	8.4 Pupil functions which improve the contrast transfer function of the system for a given spatial frequency	129
9.	PRODUCTION AND APPLICATIONS OF APODISERS	129
	9.1 Manufacture of apodisers	130
	9.2 Some applications	132
	9.3 Conclusion.	136
10.	APODISATION A POSTERIORI (APODISATION BY CONVOLUTION)	136
	10.1 Possibility of an a posteriori process	136
	10.2 The a posteriori operation equivalent to a given pupil operation	137
	10.3 The question of the existence of a pupil function equivalent to a given a posteriori process	138
	10.4 Possible ways of performing the convolution	142

APPENDIX A. APODISATION IN CLASSICAL SPECTROSCOPIC DEVICES	147
A.1 Definition of the object and of the instrumental function in spectroscopy	147
A.2 Case of incoherent illumination of the slit	149
A.3 Apodisation and luminosity in the case of coherent or partially coherent illumination	157
A.4 Conclusion	162
APPENDIX B. APODISATION IN FOURIER TRANSFORM SPECTROSCOPY . .	162
B.1 Recapitulation of the principle	163
B.2 Instrumental function for an infinitely small field stop	164
B.3 Apodisation in the case of an infinitely small field stop	164
B.4 The effect of finite solid angle of the beam	167
B.5 Apodisation by a field stop of suitable diameter	168
APPENDIX C. APODISATION IN THE CASE OF SISAM	171
C.1 Recapitulation of the principle of the instrument	171
C.2 The instrumental function and apodisation by a pupil diaphragm	174
C.3 Effect of the finite angular extent of the beams	175
C.4 Apodisation by a field stop of suitable diameter	176
APPENDIX D. APODISATION IN THE CASE OF THE GIRARD SPECTROMETER	177
D.1 Principle of the Girard spectrometer	177
D.2 Apodisation by the contour of the grid	180
D.3 The effect of diffraction	180
D.4 Apodisation by defocussing	183
ACKNOWLEDGEMENT	184
REFERENCES	184

III. MATRIX TREATMENT OF PARTIAL COHERENCE

by H. GAMO

(Rochester, New York)

1. INTRODUCTION	189
2. PRELIMINARY CONSIDERATIONS	190
3. ORTHOGONAL EXPANSIONS FOR WAVE AMPLITUDE	202
4. INTENSITY MATRIX	207
4.1 Derivation of the intensity matrix	207
4.2 Physical meaning of the intensity matrix elements	211
4.3 Diagonalization of the intensity matrix	215
4.4 Mutual intensity as a kernel	221
4.5 Meaning of eigenvalues, eigenvectors and eigenfunctions .	225
4.6 Partial coherence in terms of the intensity matrix	229
4.7 The intensity matrix and the density matrix	233
4.8 An example of a partially coherent wave field	238
4.9 Shift matrix and spatially stationary matrix	243

5.	TRANSMISSION MATRIX	247
5.1	Definition of the transmission matrix and transformation of intensity matrix	247
5.2	Conditions of passive transmission	251
5.3	Factorization of the transmission matrix	254
5.4	Transmission function as a kernel	258
5.5	Physical properties of the transmission matrix	260
6.	DETECTION MATRIX	263
6.1	Derivation of the detection matrix	263
6.2	Detection matrix for the mutual intensity	271
7.	PROBABILITY DISTRIBUTION OF WAVE AMPLITUDES AND THERMODYNAMIC ENTROPY	274
7.1	Probability distribution of wave amplitudes in terms of the intensity matrix	275
7.2	Thermodynamic entropy of partially coherent beams	287
8.	TWO-DIMENSIONAL WAVE FIELD	302
9.	POLYCHROMATIC LIGHT	309
10.	RELATED SUBJECTS	314
	ACKNOWLEDGEMENTS	316
	APPENDICES	317
I.	Derivation of the formula (4.121)	317
II.	Calculation of the trace of the intensity matrix (4.123)	319
III.	Convergence of d -series	320
IV.	Inequalities for concave functions related to entropy	320
V.	An inference experiment with two circular sampling slits and the intensity matrix elements	323
