PREFACE	VII
CONTENTS	IX

I. RECENT ADVANCES IN HOLOGRAPHY

by E. N. LEITH AND J. UPATNIEKS (Ann Arbor, Mich.)

1. INTRODUCTION	3
1.1 Recovery of the recorded wave	5
1.2 Diffused illumination photography	8
1.3 Three-dimensional photography	12
1.4 Hologram multiplexing and multicolor holography	14
2. TRANSFER CHARACTERISTICS OF THE EMULSION	16
3. HOLOGRAPHIC MAGNIFICATION AND ABERRATIONS	20
4. BANDWIDTH REQUIREMENTS	26
5. HOLOGRAPHIC RECORDING IN THREE-DIMENSIONAL MEDIA	31
6. HOLOGRAPHIC INTERFEROMETRY	35
7. COHERENCE MEASUREMENT AND CONTOURING	43
8. IMAGERY THROUGH IRREGULAR MEDIA	44
9. INCOHERENT RADIATION HOLOGRAMS	46
10. POSSIBLE APPLICATION AND CONCLUSION	48
ACKNOWLEDGMENTS	50
REFERENCES	50

II. SCATTERING OF LIGHT BY ROUGH SURFACES

by P. BECKMANN (Colorado)

1. INTRODUCTION	55
2. KIRCHHOFF SOLUTION	58
3. PERIODIC SURFACES	60
4. RANDOM ROUGH SURFACES	61
5. DEPOLARISATION	64
6. COMPOSITE ROUGH SURFACES	66
7. SHADOWING	67
8. CONCLUSION	68
REFERENCES	69

III. MEASUREMENT OF THE SECOND ORDER DEGREE OF COHERENCE

by M. FRANÇON AND S. MALLICK (Paris)

1. INTRODUCTION	73
2. METHODS FOR MEASURING THE DEGREE OF COHERENCE OF QUASI-MONOCROMATIC LIGHT	75
2.1 Method of Zernike.	75
2.2 Experiment of Thompson and Wolf	75
2.3 Method of Bouché and Kellen.	77
2.4 Michelson's method	77
2.5 Method of Hanbury Brown and Twiss	78
3. DESCRIPTION OF THE MAIN POLARIZATION INTERFEROMETERS USED FOR MEASURING THE DEGREE OF COHERENCE.	79
3.1 The Savart polariscope.	79
3.2 A modified Savart polariscope	81
3.3 The Wollaston prism	81
3.4 A modified Wollaston prism	82
3.5 Achromatic elements.	82
4. APPLICATION OF HARMONIC ANALYSIS TO THE MEASUREMENT OF DEGREE OF COHERENCE	84
4.1 Principle of the method	84
4.2 Degree of coherence of light at two points illuminated by a source with a centre of symmetry	85
4.3 Measurement of the degree of coherence using a polarization interferometer (source with a centre of symmetry)	88
4.4 Results of measurements	93
4.5 Very small source transfer function	95
4.6 Source without a centre of symmetry	96
5. MEASUREMENT OF THE DEGREE OF COHERENCE OF LIGHT FROM A SOURCE WITH A CENTRE OF SYMMETRY. POLYCHROMATIC LIGHT	97
5.1 Mutual coherence function of the vibrations at two points illuminated by a polychromatic source.	97
5.2 Application of polarization interferometers to measurements of the degree of coherence when the source is polychromatic	99
5.3 Measurement of the degree of coherence of light from source with broad spectrum	103
REFERENCES.	104

IV. DESIGN OF ZOOM LENSES

by K. YAMAJI (Tokyo)

1. INTRODUCTION	107
2. FIRST ORDER DESIGN OF ZOOM LENSES	108
2.1 Type I.	109
2.2 Type II	112
2.3 Type III	113
2.4 Type V	115
2.5 Type IV	118
2.6 Type VI	123
2.7 Linear and optical compensation types.	124

3. GENERAL PROCEDURES OF ZOOM LENS DESIGN	125
3.1 Analogy with the first order design	126
3.2 Intrinsic coefficient and characteristic matrix	127
3.3 The third order region	129
3.4 The fifth order region	136
3.5 The chromatic first order region	137
4. THIRD ORDER DESIGN OF ZOOM LENSES	140
4.1 An example of a characteristic matrix	140
4.2 Degrees of freedom and restrictive conditions	148
4.3 Analytical design of zoom lenses	152
5. CHROMATIC FIRST ORDER DESIGN OF ZOOM LENSES	162
5.1 General discussion of characteristic matrix	162
5.2 An example of design	165
6. CONCLUSION	169
REFERENCES	169

V. SOME APPLICATIONS OF LASERS TO INTERFEROMETRY

by D. R. HERRIOTT (Murray Hill, N.J.)

1. INTRODUCTION	173
2. CHARACTERISTICS OF LIGHT SOURCES FOR INTERFEROMETRY	174
2.1 Conventional sources	174
2.2 Characteristics of laser light sources	175
3. APPLICATION OF LASERS TO INTERFEROMETRY	177
3.1 Scanning spherical mirror interferometer	178
3.2 Long coherence length interferometers	185
3.3 Long path multiple beam interferometry	188
3.4 Multiple wavelength multiple beam interferometer	193
3.5 Linear measurements with the laser	199
3.6 Optical delay lines and application to interferometry	201
3.7 Holography, communications and temporal signal processing	206
4. CONCLUSIONS	209
REFERENCES	209

VI. EXPERIMENTAL STUDIES OF INTENSITY FLUCTUATIONS IN LASERS

by J. A. ARMSTRONG AND A. W. SMITH (Yorktown Heights, N.Y.)

1. INTRODUCTION	213
2. ELEMENTARY THEORY OF NOISE IN LASER OSCILLATORS	215
2.1 Introductory remarks	215
2.2 Formulation of the laser noise problem	216
2.3 Quasi-linear theory of Van der Pol's equation	218
2.4 Other theories of laser noise	223

3. MEASUREMENT OF INTENSITY FLUCTUATIONS IN LASERS	225
3.1 Introductory remarks	225
3.2 Single detector method	226
3.3 Two detector method	228
3.4 Theory of the measurements for two special cases	230
3.5 Experimental results: introduction and gas lasers	231
3.6 Experimental results: GaAs injection laser	235
3.7 Other experimental results: YAl garnet; Nd laser	239
4. PHOTOELECTRON COUNTING DISTRIBUTIONS	240
4.1 Introductory remarks	240
4.2 Counting distributions for $T \ll \tau_n$	241
4.3 Counting distributions for $T \cong \tau_n$	246
4.4 Experimentally observed laser counting distribution	247
5. CONCLUDING REMARKS	255
ACKNOWLEDGMENT	255
REFERENCES	256

VII. FOURIER SPECTROSCOPY

by G. A. VANASSE AND H. SAKAI (Bedford, Mass.)

1. INTRODUCTION	261
2. GENERAL PRINCIPLE OF FOURIER SPECTROSCOPY	263
2.1 Visibility	265
2.2 Interferogram	269
2.3 Heterodyning	271
3. RECOVERY OF SPECTRAL DISTRIBUTION IN FOURIER SPECTROSCOPY	273
3.1 Resolution	273
3.2 Sampling and interpolation techniques	274
4. APERTURE EFFECT IN THE MICHELSON INTERFEROMETER	280
5. MATHEMATICAL FILTERING	283
5.1 Apodization	284
5.2 Pre-filtering	287
5.3 Phase correction	291
6. HILBERT TRANSFORM	295
7. SIGNAL-TO-NOISE RATIO	298
7.1 Dependence of S/N ratio on the observation time in the spectrum	298
7.2 Derivation of the multiplex advantage	301
7.3 Photon noise	303
7.4 Scintillation noise	303
7.5 Digitizing noise	303
7.6 Noise increase due to improper sampling	305
8. INSTRUMENTATION	307
8.1 Throughput gain	307
8.2 The Michelson interferometer and its variations	308
8.3 Lamellar grating interferometer	311
8.4 Other interferometers	314
8.5 Generating the interferogram	316
8.6 Recording the interferogram	319

9. METHODS OF PERFORMING THE FOURIER TRANSFORMATION	320
9.1 Digital computation method	320
9.2 Analog computation techniques (analysis)	323
9.3 Analog computation techniques (synthesis)	324
10. EXPERIMENTAL RESULTS	324
10.1 Spectral measurements	324
10.2 Refractometry	326
11. CONCLUSION	326
ACKNOWLEDGMENTS	327
REFERENCES	327

VIII. DIFFRACTION AT A BLACK SCREEN

Part II: ELECTROMAGNETIC THEORY

by F. KOTTLER † (Rochester, N.Y.)

EDITORIAL REMARKS	333
-----------------------------	-----

1. REFORMULATION OF THE 'SCALAR' THEORY

1. RECAPITULATION FROM PART I	335
2. THE TOPOLOGICAL EXPLANATION OF THE BLACKNESS OF THE KIRCHHOFF SCREEN	337
3. A DISCONTINUITY SURFACE IN PHYSICAL SPACE	342
4. SOME EXPERIMENTAL REMARKS	349

2. ELECTROMAGNETIC DIFFRACTION

5. TRANSFORMATION OF THE VECTOR FORM OF KIRCHHOFF'S DIFFRACTION INTEGRAL	354
6. INTRODUCING THE ELECTROMAGNETIC VECTORS IN KIRCHHOFF'S DIFFRACTION INTEGRAL	357
7. THE ELECTROMAGNETIC THEORY OF DIFFRACTION AT A BLACK SCREEN . . .	360
8. PHYSICAL INTERPRETATION OF THE ELECTROMAGNETIC DIFFRACTION FOR- MULAE	362

APPENDIX A

1A. Some rules of vector algebra	370
2A. Some rules of vector analyses	371

APPENDIX B

1B. The Hertzian vectors	372
