

CONTENTS

I. GAS LASERS AND THEIR APPLICATION TO PRECISE LENGTH MEASUREMENTS

by ARNOLD L. BLOOM (Mountain View and Stanford, California)

1. INTRODUCTION.	3
2. RELATED TOPICS	4
2.1 Ancillary techniques	4
2.2 Multi-mode operation.	4
3. POWER OUTPUT VERSUS FREQUENCY	6
3.1 The gain profile	6
3.2 Travelling-wave lasers	7
3.3 Standing-wave lasers	11
3.4 Application of standing-wave techniques to absorption lines	15
4. PRESENT STATUS OF EXPERIMENTAL WORK.	17
4.1 Absorption cell experiments in the visible	18
4.2 Absorption cell experiments in the infrared	22
4.3 Emission lines	24
5. ACKNOWLEDGEMENTS.	29
REFERENCES.	29

II. PICOSECOND LASER PULSES

by A. J. DEMARIA (East Hartford, Connecticut)

1. INTRODUCTION.	33
2. BASIC Q -SWITCHING PRINCIPLES.	35
3. GENERATION OF PICOSECOND LASER PULSES	37
3.1 Active mode-locking	40
3.2 Passive mode-locking.	43
3.3 Chirping and pulse compression	49
3.4 Optical pumping with mode-locked pulses	55
4. MEASUREMENT TECHNIQUES FOR PICOSECOND LASER PULSES.	57
4.1 Introduction.	57
4.2 Linear optical pulse-width measurement techniques	58
4.3 Nonlinear optical pulse-width measurement techniques.	61
REFERENCES.	70

III. OPTICAL PROPAGATION THROUGH THE TURBULENT ATMOSPHERE

by JOHN W. STROHBEHN (Hanover, N.H.)

1. INTRODUCTION.	75
2. TURBULENCE IN THE ATMOSPHERE	77
3. SPECTRA FOR AMPLITUDE AND PHASE FLUCTUATIONS	82
3.1 Spectral expansions and transform relations	83
3.2 Rytov's method	85
4. COMPARISON BETWEEN THEORY AND EXPERIMENT.	92
5. RENORMALIZATION METHODS	100
6. EXTENSIONS OF THE PLANE WAVE RESULTS	104
6.1 A random medium with smoothly varying characteristics	104
6.2 Spherical wave and finite beam sources	106
6.3 Finite aperture at the receiver	111
6.4 Phase screen approach	112
6.5 Coherence functions	114
7. APPLICATIONS	116
REFERENCES.	119

IV. SYNTHESIS OF OPTICAL BIREFRINGENT NETWORKS

by E. O. AMMANN (Mountain View, California)

1. INTRODUCTION.	125
1.1 General	125
1.2 Lyot and Solc filters.	128
1.3 Understanding how birefringent networks function	129
1.4 Specifying the desired response	134
2. SYNTHESIS PROCEDURES	136
2.1 Procedure 1 (single-pass)	137
2.2 Procedure 2 (single-pass)	146
2.3 Procedure 3 (single-pass)	149
2.4 Procedures 4A and 4B (double-pass)	157
2.5 Procedures 5A and 5B (double-pass).	163
3. EXPERIMENTAL RESULTS	168
3.1 Lyot and Solc filters.	168
3.2 A technique for measuring transmittance	169
3.3 Synthesized birefringent networks	170
4. APPLICATION OF SYNTHESIS PROCEDURES TO ELECTRO-OPTIC NETWORKS	170
ACKNOWLEDGMENTS	173
APPENDIX A.	173
APPENDIX B.	175
APPENDIX C.	176
REFERENCES.	177

V. MODE LOCKING IN GAS LASERS

by L. ALLEN AND D. G. C. JONES (Brighton, England)

1. INTRODUCTION.	181
2. FORCED LOCKING	183
2.1 Introduction.	183
2.2 Experimental	184
2.3 Theory	196
3. SELF-LOCKING.	212
3.1 Experimental	212
3.2 Maximum emission principle theory	218
3.3 Self-consistent field theory	221
3.4 The pulse train approach.	229
4. CONCLUSIONS	232
REFERENCES.	233

VI. CRYSTAL OPTICS WITH SPATIAL DISPERSION

by V. M. AGRANOVICH and V. L. GINZBURG (Moscow, USSR)

1. INTRODUCTION.	237
2. EQUATIONS OF THE ELECTROMAGNETIC FIELD, TENSORS $\epsilon_{ij}(\omega, \mathbf{k})$ AND $\epsilon_{L, ij}(\omega, \mathbf{k})$, DISPERSION LAW FOR NORMAL WAVES IN CRYSTALS	241
3. DEPENDENCE OF TENSOR $\epsilon_{ij}(\omega, \mathbf{k})$ ON THE WAVE VECTOR \mathbf{k} IN THE OPTICAL BAND	252
4. SPATIAL DISPERSION EFFECTS IN CRYSTALS.	259
4.1 Introduction, optical anisotropy of cubic crystals	259
4.2 New waves in the neighbourhood of absorption lines	260
4.3 Gyrotropic bi-refringence and new waves in antiferromagnetic non-gyrotropic crystals	271
CONCLUSION	278
REFERENCES.	279

VII. APPLICATIONS OF OPTICAL METHODS IN THE DIFFRACTION THEORY OF ELASTIC WAVES

by K. GNIADK and J. PETYKIEWICZ (Poland)

1. INTRODUCTION.	283
2. KIRCHHOFF'S DIFFRACTION THEORY	284
3. HUYGENS' PRINCIPLE FOR ELASTIC MEDIA	286
4. PROPERTIES OF THE SCREEN AND THE PROBLEM OF EDGE INTEGRALS	290
5. THE YOUNG-RUBINOWICZ INTERPRETATION IN KIRCHHOFF'S DIFFRACTION THEORY OF ELASTIC WAVES	292
6. TENSOR POTENTIAL OF ELASTIC WAVES	293
7. FRESNEL DIFFRACTION OF ELASTIC WAVES.	297
8. FRAUNHOFER DIFFRACTION OF ELASTIC WAVES.	304
9. CONCLUSION.	309
REFERENCES.	309

VIII. EVALUATION, DESIGN AND EXTRAPOLATION METHODS FOR OPTICAL SIGNALS, BASED ON USE OF THE PROLATE FUNCTIONS

by B. ROY FRIEDEN (Tucson, Arizona).

1. INTRODUCTION.	313
1.1 Linear prolate functions	313
1.2 Circular prolate functions.	314
1.3 Normalization and notation.	314
1.4 The space-bandwidth product and prolate functions.	315
1.5 Past use in boundary-value problems	315
1.6 Optical applications, a synopsis	316
1.6.1 Laser mode patterns	316
1.6.2 An apodization problem, maximizing the encircled energy	317
1.6.3 Post extrapolation beyond the optical bandwidth	317
1.6.4 Post extrapolation of an image piece.	318
1.6.5 Real-time extrapolation beyond the optical bandwidth	318
1.6.6 Degrees of freedom in an image	319
1.6.7 Analysis of image quality for generally aberrated optics	319
1.7 Discussion, and some questions of a fundamental nature	320
2. MATHEMATICAL PROPERTIES OF THE LINEAR PROLATE FUNCTIONS	320
2.1 Relation to classical functions.	321
2.2 Defining relation.	321
2.3 Orthogonality and completeness on the finite interval.	321
2.4 Invariance to the infinite Fourier transform operation.	322
2.5 The λ_n as eigenvalues of the $\sin(x)/x$ kernel	324
2.6 Duality of orthogonality	324
2.7 Orthogonality and completeness on the infinite interval.	324
2.8 An extrapolation formula for bandlimited functions.	325
2.8.1 Comparison with a familiar interpolation formula	326
2.9 Behavior of the eigenvalues $\lambda_n(c)$	326
2.10 The maximum fractional "energy" within $ x \leq x_0$ over the class of bandlimited functions	327
2.11 Expansion of some familiar functions in terms of the $\psi_n(x)$	332
2.12 A class of functions whose finite Fourier transform is asymptotic to a Dirac delta function.	333
3. NUMERICAL CALCULATION OF THE λ_n AND $\psi_n(x)$	334
3.1 Values of $c \lesssim 10$	335
3.2 Values of $c \gtrsim 10$	336
3.3 An alternative to closed formulae?	337
4. MATHEMATICAL PROPERTIES OF THE CIRCULAR PROLATE FUNCTIONS . . .	337
4.1 Relation to functions of Slepian and Heurtley	337
4.2 Defining relation: invariance to the finite Hankel transform	339
4.3 Orthogonality and completeness over a finite radial interval. . . .	340
4.4 Invariance to the infinite Hankel transform	340
4.5 The $\lambda_{N,n}$ as eigenvalues of a "reflection kernel	341
4.6 Duality of orthogonality	341
4.7 Orthogonality and completeness over the infinite radial interval . . .	342
4.8 An extrapolating formula for bandlimited functions of radius	342
4.9 Behavior of the eigenvalues	342
4.10 The maximum fractional "energy" within $0 \leq r \leq r_0$ over the class of bandlimited, radial functions	345
4.11 Expansion of some familiar functions in terms of the $\Phi_{N,n}(r)$. . .	345
4.12 A class of functions whose finite J_N -transform is asymptotic to a Dirac delta function of radius	346

5. NUMERICAL CALCULATION OF THE $\lambda_{N,n}$ AND $\Phi_{N,n}(r)$	347
5.1 Small values of c	348
5.2 Large values of c	349
6. APPLICATIONS	349
6.1 Fraunhofer-Fresnel image formation	349
6.1.1 Focussing device in the aperture	349
6.1.2 No focussing device in the aperture	350
6.2 Analysis of laser modes	351
6.2.1 Confocal laser with identical endplates	351
6.2.2 Confocal laser with non-identical endplates	356
6.2.3 General laser geometry	360
6.2.4 Discussion	362
6.3 Problems of optimal "concentration": of encircled energy, point amplitude variability, and error of restoration or smoothing	363
6.3.1 Applications to apodization theory: Maximizing the enclosed energy	363
6.3.2 Variability of the point amplitude response and other bandlimited functions	366
6.3.3 Application to filtering theory: maximum possible error of restoration or smoothing over a finite interval	367
6.4 The extrapolation of image data	368
6.4.1 Application to the incoherent image	368
6.4.2 Experimental determination of the optical transfer function	370
6.4.3 Bandlimited restoration from extrapolated image data	371
6.5 Extrapolation beyond the bandwidth	375
6.5.1 Effect of noise and truncation	376
6.5.2 Numerical simulation	378
6.5.3 Discussion	379
6.6 Real-time extrapolation beyond the bandwidth	380
6.6.1 Derivation (one-dimensional case)	381
6.6.2 Generally rectangular field	381
6.6.3 Generally circular field	382
6.6.4 Ultimate response from a lensless aperture	383
6.6.5 Ultimate depth of focus	383
6.6.6 Behavior of the solutions	385
6.6.7 Strehl flux ratio and sensitivity to pupil wave error	388
6.6.8 Real-time extrapolation of functions using pupil $P_M(\beta)$	389
6.6.9 A thought-experiment: picture extrapolation by use of a coherent processor	391
6.6.10 A laser superposition mode with an arbitrarily small spot size	393
6.7 Degrees of freedom in the image	393
6.7.1 By counting sampling points within the interval	393
6.7.2 By including contributions from sampling points outside the interval	394
6.7.3 An "effective number"	394
6.7.4 Prolate degrees of freedom	394
6.7.5 Effective degrees of freedom in the presence of noise	395
6.7.6 Degrees of freedom intrinsic to the "extrapolating pupil"	398
6.8 Evaluation of wave-aberrations	399
6.8.1 Formal solution	399
6.8.2 Past work by Zernike and Nijboer	400
6.8.3 A new approach to the problem	400
6.8.4 Numerical results	404
6.8.5 Rectangular pupil case	405
