

## CONTENTS

### I. SOME NEW OPTICAL DESIGNS FOR ULTRA-VIOLET BIDIMENSIONAL DETECTION OF ASTRONOMICAL OBJECTS

by G. COURTÈS, P. CRUVELLIER, M. DETAILLE and M. SAÏSSE  
(MARSEILLE, FRANCE)

1. INTRODUCTION . . . . .	3
1.1 Spectral analysis of the sources . . . . .	3
1.2 Bidimensional information . . . . .	4
1.3 First approaches to bidimensional information . . . . .	4
1.4 Direct images of the sky in UV radiation . . . . .	5
2. UV PHOTOGRAPHIC SURVEYS USING WIDE FIELD CAMERAS . . . . .	6
2.1 Early wide field cameras . . . . .	6
2.2 The very wide field camera (1 ES 022 in Spacelab-1) . . . . .	7
2.2.1 Scientific program . . . . .	7
2.2.2 The detector performance . . . . .	9
2.2.3 Compromises to accomplish the scientific program . . . . .	10
2.2.4 Geometrical conception of the camera . . . . .	10
2.2.5 Photometric properties of the imagery mode of the VWFC . . . . .	11
2.2.6 Main characteristics of the VWFC . . . . .	12
2.3 The nebular spectrograph (NS) of the VWFC . . . . .	16
2.3.1 Scientific objectives . . . . .	16
2.3.2 Limitation of the spectral range . . . . .	17
2.3.3 Optical design . . . . .	17
3. AVERAGE FIELD TELESCOPES . . . . .	19
3.1 Early telescopes . . . . .	19
3.2 The FAUST telescope on board Spacelab-1 (1 NS 05) . . . . .	22
3.3 Three-mirror anastigmat 40 cm diameter telescope solution (TMA-1000) . . . . .	25
3.4 Geneva-Marseille UV balloon program . . . . .	28
3.4.1 Balloon experiment . . . . .	30
3.4.2 The SCAP telescope . . . . .	31
3.4.3 The siderostat . . . . .	33
3.4.4 Optical design of FOCA-1000: astronomical telescope for balloon observations . . . . .	37
4. UV SPACE TELESCOPES OF THE FUTURE . . . . .	39
4.1 Introduction . . . . .	39
4.2 The space Schmidt telescope (SST) . . . . .	43
4.2.1 Description of the optical design . . . . .	43
4.3 The space telescope (ST) . . . . .	47
4.3.1 The Wide Field and Planetary Camera (WF/PC) of the ST: The radial-bay instrument . . . . .	48
4.3.2 The Faint Object Camera (FOC) . . . . .	50

4.3.2.1 The detector . . . . .	51
4.3.2.2 Description of the optical design . . . . .	53
4.3.2.3 Verification of the optical performance of the FOC and its coronagraph mode . . . . .	57
5. CONCLUSION . . . . .	58
ACKNOWLEDGEMENTS . . . . .	59
REFERENCES . . . . .	59

## II. SHAPING AND ANALYSIS OF PICOSECOND LIGHT PULSES

by C. FROEHLY, B. COLOMBEAU and M. VAMPOUILLE  
(LIMOGES, FRANCE)

INTRODUCTION . . . . .	65
1. FRAMEWORK FOR SCALAR DESCRIPTION OF OPTICAL PULSES . . . . .	66
1.1 Complex analytic representation of space-time pulses . . . . .	66
1.2 Sampling of optical pulses and number of their space-time modes . . . . .	68
1.3 Conditions leading either to deterministic analysis or to statistical analysis of optical pulses . . . . .	70
1.4 Three examples of optical pulses exhibiting different coherence . . . . .	74
1.4.1 Deterministic temporal analysis of purely temporal pulses . . . . .	74
1.4.2 Purely temporal analysis of space-time pulses . . . . .	75
1.4.3 Partially coherent temporal analysis of purely temporal pulses . . . . .	76
2. SPATIAL AND TEMPORAL PULSE FILTERING ON PROPAGATION AND DIFFRACTION . . . . .	77
2.1 Introduction . . . . .	77
2.2 Diffraction and propagation of quasi-monochromatic pulses . . . . .	78
2.2.1 Definition of quasi-monochromatic pulses . . . . .	78
2.2.2 Spatial phase filtering on monochromatic pulses by free space propagation . . . . .	80
2.3 Linear dispersion of quasi-single space frequency pulses . . . . .	84
2.3.1 Definition of single space frequency pulses . . . . .	84
2.3.2 Linear dispersion of single space frequency pulses on free space propagation . . . . .	85
2.3.3 Definition of quasi-single space frequency pulses; finesse of the spatial frequency spectrum of a pulse . . . . .	90
2.3.4 Experiments on the dispersion of quasi-single space frequency pulses . . . . .	93
2.3.5 Two pulse interference: temporal Young's experiment . . . . .	94
2.3.6 Temporal Fourier analysis by "far field dispersion" of single space frequency pulses . . . . .	96
2.4 Temporal filtering of pulses by transmission through time independent optical pupils . . . . .	97
2.4.1 Time impulse response of Young's slits . . . . .	98
2.4.2 Time impulse response of a periodic grating . . . . .	99
2.4.3 Time impulse response of other time independent apertures . . . . .	100
3. TIME SHAPING OF PICOSECOND OPTICAL PULSES . . . . .	102
3.1 Pulse shaping by optical filtering of time frequencies (spectral modulation) . . . . .	103
3.1.1 General principles and limitations . . . . .	103
3.1.2 Examples of typical shapes produced by amplitude or phase filtering . . . . .	103
3.1.3 Filtering experiments . . . . .	105
3.2 Pulse shaping by temporal modulation . . . . .	121

3.2.1 Pulse shortening by self-amplitude modulation in saturable absorbers . . . . .	122
3.2.2 Frequency modulation by self-induced refractive index variation of transparent materials . . . . .	123
3.3 Shaping by a combination of temporal and spectral modulations . . . . .	128
3.3.1 Self-phase modulation of pulses after temporal shaping of their intensity . . . . .	128
3.3.2 Combination of linear dispersion and self-phase modulation of Gaussian pulses: compression and other pulse distortions . . . . .	131
3.3.3 A few other examples of combined modulation and filtering . . . . .	133
4. OPTICAL ANALYSIS OF PICOSECOND LIGHT PULSES . . . . .	134
4.1 Introduction . . . . .	134
4.2 Measurements of pulse intensity profiles . . . . .	135
4.3 Coherent optical analysis of the temporal structure of picosecond pulses . . . . .	137
4.3.1 Measurements of the number of temporal modes (samples) of a pulse . . . . .	138
4.3.2 Measurements of phase (frequency) modulation by pulse compression . . . . .	138
4.3.3 Measurements of "instantaneous frequencies" . . . . .	139
4.3.4 Temporal phase measurements by optical beating . . . . .	140
4.3.5 Coherent pulse imaging by amplitude correlations or spectral analysis . . . . .	141
ACKNOWLEDGEMENTS . . . . .	149
REFERENCES . . . . .	150

### III. MULTI-PHOTON SCATTERING MOLECULAR SPECTROSCOPY

by S. KIELICH (POZNAŃ, POLAND)

1. HISTORICAL DEVELOPMENTS AND OUTLINE OF THE PRESENT REVIEW . . . . .	157
1.1 The definition of spontaneous multi-photon scattering . . . . .	157
1.2 Spontaneous hyper-Rayleigh light scattering studies . . . . .	161
1.3 Spontaneous hyper-Raman scattering studies . . . . .	163
1.4 The purpose of this paper . . . . .	165
2. NONLINEAR MOLECULAR RAMAN POLARIZABILITIES . . . . .	166
2.1 The multipole interaction Hamiltonian . . . . .	167
2.2 The equation of motion for the vector of state . . . . .	169
2.3 Nonlinear polarizabilities in the electric-dipole approximation . . . . .	172
2.4 Multipole electric and magnetic polarizabilities . . . . .	175
3. INCOHERENT AND NONRESONANT MULTI-PHOTON SCATTERING BY FREE MOLECULES . . . . .	178
3.1 The electric and magnetic fields of the scattered wave . . . . .	178
3.2 Harmonic electric-dipole elastic scattering processes . . . . .	179
3.3 Multi-photon vibrational Raman scattering (classical approach) . . . . .	182
3.4 Rotational, vibrational and rotational-vibrational multi-photon scattering processes (semi-classical approach) . . . . .	183
3.4.1 Three-photon Raman scattering . . . . .	187
3.4.2 Four-photon scattering . . . . .	198
4. LINEWIDTH BROADENING IN QUASI-ELASTIC MULTI-PHOTON SCATTERING BY CORRELATED MOLECULES . . . . .	201
4.1 The electric field and correlation tensor of scattered light . . . . .	201

4.2 Linear scattering . . . . .	204
4.2.1 Isotropic incoherent and coherent scattering . . . . .	205
4.2.2 Anisotropic incoherent and coherent scattering . . . . .	207
4.3 Three-photon scattering . . . . .	210
4.4 Four-photon scattering . . . . .	215
5. COOPERATIVE THREE-PHOTON SCATTERING . . . . .	216
5.1 Fluctuational variations of the nonlinear molecular polarizabilities . . . . .	216
5.2 The time-correlation function for interacting atoms and centrosymmetric molecules . . . . .	219
5.2.1 Many-body atomic multipole interaction . . . . .	220
5.2.2 Molecules with centre of inversion destroyed by the field of electric multipoles . . . . .	222
6. RAMAN LINE BROADENING IN MULTI-PHOTON SCATTERING (CLASSICAL TREATMENT) . . . . .	226
6.1 Three-photon Raman scattering . . . . .	230
6.2 Four-photon Raman scattering . . . . .	232
7. ANGULAR DISTRIBUTION AND POLARIZATION STATES OF MULTI-PHOTON SCATTERED LIGHT . . . . .	233
7.1 The scattering tensors in terms of Stokes parameters . . . . .	233
7.2 Natural incident light . . . . .	236
7.3 Linearly polarized incident light . . . . .	238
7.4 Circularly polarized incident light . . . . .	239
7.5 Four-photon light scattering . . . . .	241
7.6 Reciprocity relations . . . . .	244
8. CONCLUDING REMARKS, AND OUTLOOK . . . . .	246
ACKNOWLEDGEMENTS . . . . .	249
APPENDIX A. IRREDUCIBLE CARTESIAN TENSORS . . . . .	250
APPENDIX B. ISOTROPIC AVERAGING OF CARTESIAN TENSORS . . . . .	251

#### IV. COLOUR HOLOGRAPHY

by P. HARIHARAN (SYDNEY, AUSTRALIA)

1. INTRODUCTION . . . . .	265
1.1 Basic principles . . . . .	265
1.2 The cross-talk problem . . . . .	266
2. EARLY TECHNIQUES FOR COLOUR HOLOGRAPHY . . . . .	268
2.1 Thin holograms . . . . .	268
2.1.1 Frequency multiplexing . . . . .	268
2.1.2 Spatial multiplexing . . . . .	269
2.1.3 Coded reference beams . . . . .	271
2.1.4 Division of the aperture field . . . . .	272
2.1.5 Separation of spectra in image holograms . . . . .	274
2.2 Volume holograms . . . . .	275
2.2.1 Volume transmission holograms . . . . .	276
2.2.2 Volume reflection holograms . . . . .	278
2.3 Problems with early techniques . . . . .	279
2.3.1 Diffraction efficiency . . . . .	279
2.3.2 Emulsion shrinkage . . . . .	279
2.3.3 Colour rendering . . . . .	280

3. MULTICOLOUR RAINBOW HOLOGRAMS . . . . .	283
3.1 The rainbow hologram . . . . .	284
3.2 Multicolour images with rainbow holograms . . . . .	285
3.3 One-step multicolour rainbow holograms . . . . .	288
3.4 Image blur . . . . .	290
3.4.1 Wavelength spread . . . . .	290
3.4.2 Source size . . . . .	291
3.4.3 Diffraction . . . . .	292
3.5 Recording materials . . . . .	292
3.5.1 The sandwich technique . . . . .	292
3.5.2 Gain in image luminance with the sandwich technique . . . . .	294
4. VOLUME REFLECTION HOLOGRAMS: NEW TECHNIQUES . . . . .	295
4.1 Alternative recording materials . . . . .	296
4.2 Bleached reflection holograms . . . . .	296
4.3 Sandwich technique . . . . .	297
4.4 Concentration of the diffracted light . . . . .	299
5. PSEUDOCOLOUR IMAGES . . . . .	300
5.1 Colour coding . . . . .	300
5.2 Rainbow holograms . . . . .	301
5.3 Volume reflection holograms . . . . .	302
6. ACHROMATIC IMAGES . . . . .	303
6.1 Dispersion compensation . . . . .	303
6.2 Rainbow holograms . . . . .	305
7. APPLICATIONS OF COLOUR HOLOGRAPHY . . . . .	307
7.1 Storage of colour images . . . . .	307
7.1.1 Systems using image holograms . . . . .	308
7.1.2 Systems using spatial filtration . . . . .	309
7.1.3 Systems using rainbow holograms . . . . .	310
7.2 Colour holographic stereograms . . . . .	312
7.2.1 White-light holographic stereograms . . . . .	313
7.2.2 Achromatic holographic stereograms . . . . .	316
7.3 Computer-generated colour holograms . . . . .	316
7.3.1 Technique using multilayer colour film . . . . .	317
7.3.2 Techniques using holographic stereograms . . . . .	318
7.4 Holographic cinematography . . . . .	318
8. CONCLUSIONS . . . . .	321
ACKNOWLEDGEMENTS . . . . .	321
REFERENCES . . . . .	321

## V. GENERATION OF TUNABLE COHERENT VACUUM-ULTRAVIOLET RADIATION

by W. JAMROZ and B. P. STOICHEFF (TORONTO, CANADA)

1. INTRODUCTION . . . . .	327
2. THEORY . . . . .	328
2.1 Nonlinear susceptibilities . . . . .	328
2.2 Resonant enhancement and tunability in gases . . . . .	331
2.3 Conversion efficiency . . . . .	337
2.4 Saturation effects and other limiting processes . . . . .	341
2.5 Higher order nonlinear effects . . . . .	346

3. EXPERIMENTAL RESULTS . . . . .	349
3.1 General techniques of frequency conversion . . . . .	349
3.2 Tunable generation in rare gases . . . . .	353
3.3 Tunable generation in metal vapors . . . . .	361
3.3.1 Strontium . . . . .	363
3.3.2 Magnesium . . . . .	364
3.3.3 Zinc . . . . .	367
3.3.4 Mercury . . . . .	369
3.3.5 Beryllium, calcium . . . . .	371
3.4 Tunable generation in molecular gases . . . . .	372
3.5 VUV and XUV generation by higher order processes . . . . .	374
3.6 Generation of tunable XUV radiation by anti-Stokes Raman scattering . . . . .	376
4. CONCLUSION . . . . .	377
