## I. DIGITAL HOLOGRAPHY – COMPUTER-GENERATED HOLOGRAMS

by O. BRYNGDAHL and F. WYROWSKI (ESSEN, FED. REP. GERMANY)

§ 1. INTRODUCTION . . . . .	3
§ 2. EARLY HISTORY AND DEVELOPMENTS . . . . .	5
2.1. Modifications of the hologram concept . . . . .	5
2.1.1. Detour phase hologram . . . . .	5
2.1.2. Delayed sampled hologram . . . . .	6
2.1.3. Kinoform . . . . .	6
2.2. Simulation of optical holograms . . . . .	7
2.2.1. Carrier type hologram . . . . .	7
2.2.2. Computer-generated interferogram . . . . .	7
2.3. 3-D digital holography . . . . .	8
2.3.1. Synthesis in planes of point objects . . . . .	8
2.3.2. Multiple perspective projections . . . . .	8
2.4. Persistence of early trends . . . . .	9
§ 3. MAJOR STEPS IN DIGITAL HOLOGRAPHY . . . . .	9
§ 4. FROM RECONSTRUCTION SPACE TO HOLOGRAM PLANE . . . . .	10
4.1. 2-D objects . . . . .	11
4.1.1. Fourier transform relationship between object and hologram . . . . .	11
4.1.1.1. Boundary conditions of spectrum and object . . . . .	12
4.1.1.2. Discrete object: boundary condition consideration . . . . .	14
4.1.1.3. Continuous object: boundary condition consideration . . . . .	16
4.1.2. Fresnel transform relationship between object and hologram . . . . .	19
4.1.3. Object or image of object in hologram plane . . . . .	21
4.2. 3-D intensity distributions: model of 3-D object . . . . .	21
4.2.1. Reduction of computation effort: removal of vertical parallax . . . . .	24
4.2.2. Reduction of computation effort: utilization of data characteristics . . . . .	25
§ 5. CODING PROCEDURES IN DIGITAL HOLOGRAPHY . . . . .	28
5.1. Fundamental principles . . . . .	28
5.2. Coding in Fourier holography . . . . .	30
5.2.1. Amplitude hologram . . . . .	34
5.2.1.1. Point- and cell-oriented coding . . . . .	36
5.2.1.2. Application of phase freedom: diffuser . . . . .	43
5.2.1.2.1. Discrete intensity signals . . . . .	44
5.2.1.2.2. Continuous intensity signals . . . . .	46
5.2.1.3. Additional application of amplitude freedom . . . . .	47
5.2.1.4. Quantization . . . . .	52
5.2.1.4.1. Quantization of point-oriented holograms . . . . .	52
5.2.1.4.2. Quantization of cell-oriented holograms . . . . .	63
5.2.2. Phase hologram . . . . .	65
5.2.2.1. Bleached amplitude hologram . . . . .	66
5.2.2.2. Direct coding in digital phase holography . . . . .	68
5.2.3. Quantization of phase hologram . . . . .	72
5.3. Coding in Fresnel holography . . . . .	76
5.4. Coding in image holography . . . . .	79
§ 6. REFLECTION OF MATERIALIZATION AND APPLICATION . . . . .	82
REFERENCES . . . . .	84

## II. QUANTUM MECHANICAL LIMIT IN OPTICAL PRECISION MEASUREMENT AND COMMUNICATION

*by Y. YAMAMOTO, S. MACHIDA, S. SAITO, N. IMOTO, T. YANAGAWA, M. KITAGAWA and  
G. BJÖRK (TOKYO, JAPAN)*

§ 1.	INTRODUCTION . . . . .	89
§ 2.	EMERGENCE OF STANDARD QUANTUM LIMITS . . . . .	90
2.1	Coherent states and quantum noise of laser emission . . . . .	90
2.2	Optical communication at standard quantum limit . . . . .	94
2.3	Gravitational wave detection interferometer at standard quantum limit . . . . .	95
2.4	Laser gyroscope at standard quantum limit . . . . .	98
2.5	Fluctuation-dissipation theorem and simultaneous measurement of two conjugate observables . . . . .	99
2.6	Minimum noise figure for linear amplifiers . . . . .	101
§ 3.	NONCLASSICAL LIGHTS . . . . .	103
3.1	Minimum uncertainty states . . . . .	103
3.2	Properties of quadrature amplitude squeezed states . . . . .	104
3.3	Generation of quadrature amplitude squeezed states . . . . .	106
3.4	Properties of number-phase squeezed states . . . . .	111
3.5	Generation of number-phase squeezed states . . . . .	113
3.6	Pump-noise-suppressed laser . . . . .	116
3.7	Properties of photon twins . . . . .	120
3.8	Generation of photon twins . . . . .	121
3.9	Generation of quadrature amplitude squeezed states and number-phase squeezed states by photon twins and feedback or feedforward . . . . .	123
§ 4.	QUANTUM NONDEMOLITION (QND) MEASUREMENT . . . . .	125
4.1	General quantum measurement and QND . . . . .	125
4.2	Contractive state measurement . . . . .	128
4.3	Projection postulate, first kind measurement, and state reduction . . . . .	129
4.4	QND measurement for photon number . . . . .	131
4.4.1	Heisenberg picture . . . . .	132
4.4.2	Schrödinger picture . . . . .	133
4.5	Effect of self-phase modulation . . . . .	135
4.6	Effect of loss . . . . .	137
4.7	Experimental QND measurement of photon number . . . . .	139
4.8	QND measurement for quadrature amplitude . . . . .	141
4.9	Preamplification function of QND . . . . .	143
4.10	Use of squeezed states as a probe wave . . . . .	145
§ 5.	QUADRATURE AMPLITUDE AMPLIFIERS AND PHOTON NUMBER AMPLIFIERS . . . . .	146
5.1	General quantum amplifiers . . . . .	146
5.2	Degenerate and nondegenerate parametric amplifiers . . . . .	147
5.3	Phase-locked oscillator . . . . .	149
5.4	Nondegenerate parametric oscillator with idler measurement-feedback . . . . .	152
5.5	Laser oscillator with QND measurement-feedback . . . . .	153
5.6	Amplification and deamplification for quantum state transformation . . . . .	156
§ 6.	QUANTUM MECHANICAL CHANNEL CAPACITY . . . . .	158
6.1	Quantum mechanical channel capacity for narrow-band communication . . . . .	159
6.2	Minimum energy cost per bit . . . . .	164
6.3	Broadband communication and time-energy uncertainty relationship . . . . .	165
6.4	Precision measurement and time-energy uncertainty relationship . . . . .	167

§ 7. APPLICATIONS . . . . .	168
7.1. Communication breaking the SQL . . . . .	169
7.2. Gyroscope breaking the SQL . . . . .	169
7.3. Gravitational wave detection interferometer breaking the SQL . . . . .	172
7.4. Measurement for surpassing the SQL of a free-mass position . . . . .	173
§ 8. DISCUSSION AND CONCLUSION . . . . .	174
ACKNOWLEDGEMENT . . . . .	176
REFERENCES . . . . .	176

### III. THE QUANTUM COHERENCE PROPERTIES OF STIMULATED RAMAN SCATTERING

by M.G. RAYMER (EUGENE, OR, USA) and I.A. WALMSLEY (ROCHESTER, NY, USA)

§ 1. INTRODUCTION . . . . .	183
§ 2. HISTORICAL PERSPECTIVE . . . . .	186
§ 3. THEORY OF STIMULATED RAMAN SCATTERING . . . . .	196
3.1. Photon rate-equation theory . . . . .	197
3.1.1. Quantized field theory of photon scattering . . . . .	198
3.1.2. Spontaneous scattering cross-section . . . . .	200
3.1.3. Stimulated scattering rate . . . . .	200
3.1.4. Photon rate equations . . . . .	201
3.1.5. Molecular polarizability model . . . . .	204
3.2. Semiclassical propagation theory . . . . .	206
3.2.1. Atomic-density operator equations of motion . . . . .	207
3.2.2. Wave equation . . . . .	209
3.2.3. Solution of semiclassical equations in the linear regime . . . . .	211
3.3. Quantum theory of SRS in a cavity . . . . .	213
3.3.1. Equations of motion . . . . .	213
3.3.2. Photon number fluctuations . . . . .	214
3.3.3. Equivalent classical random process . . . . .	216
3.3.4. Generalization to many Stokes modes . . . . .	218
3.4. Quantized-field theory of spatial propagation in SRS . . . . .	219
3.4.1. Atomic operator equations of motion . . . . .	219
3.4.2. Operator Maxwell–Bloch equations . . . . .	223
3.4.3. One-dimensional propagation . . . . .	225
3.4.4. Solution of the linearized SRS equations . . . . .	225
3.4.5. Steady-state power spectrum of SRS . . . . .	229
3.4.6. Fluctuations of Stokes pulse energy . . . . .	231
3.4.7. Temporal fluctuations of Stokes pulses . . . . .	236
3.4.8. Spatial fluctuations of Stokes pulses . . . . .	239
§ 4. EXPERIMENTS ON QUANTUM-STATISTICAL ASPECTS OF STIMULATED RAMAN SCATTERING . . . . .	245
4.1. Stokes-pulse-energy fluctuations . . . . .	245
4.2. Temporal and spatial intensity fluctuations . . . . .	255
4.3. Spontaneous generation of Raman solitons . . . . .	259
4.4. Cooperative Raman scattering (CRS) . . . . .	260
ACKNOWLEDGEMENTS . . . . .	264
LIST OF SYMBOLS . . . . .	265
REFERENCES . . . . .	267

## IV. ADVANCED EVALUATION TECHNIQUES IN INTERFEROMETRY

*by J. SCHWIDER (BERLIN, FED. REP. GERMANY)*

§ 1. INTRODUCTION . . . . .	273
§ 2. CLASSIFICATION AND CHARACTERISTICS OF REAL-TIME INTERFEROMETRIC METHODS . . . . .	276
2.1. Conventional evaluation techniques . . . . .	276
2.2. Some forerunners of automatic evaluation techniques . . . . .	278
§ 3. FRINGE EVALUATION ( $\varphi = p_0 + p_1 x$ ) . . . . .	278
3.1. Phase measurement by interpolation between fringe positions . . . . .	278
3.2. Assessment of fringe positions . . . . .	281
3.2.1. Low pass filtering and dc subtraction . . . . .	283
3.2.2. Parabolic approximation of minimum positions . . . . .	285
3.2.3. Low pass filtering combined with differentiation . . . . .	286
3.2.4. Image subtraction and level slicing . . . . .	287
3.2.5. Fringe skeletonizing or thinning operations . . . . .	287
3.3. Analog processing of scanned fringe intensity . . . . .	289
3.4. Fringe analysis by means of Fourier transform operations . . . . .	290
3.5. Spatially synchronous fringe analysis . . . . .	292
3.6. Sinusoidal fitting . . . . .	295
§ 4. PHASE MODULATORS . . . . .	296
§ 5. PHASE-LOCK INTERFEROMETRY (PLI) ( $\varphi = a \sin \omega t$ ) . . . . .	301
§ 6. HETERODYNE INTERFEROMETRY ( $\varphi = \omega t$ ) . . . . .	303
§ 7. PHASE SAMPLING INTERFEROMETRY (PSI) ( $\varphi = (r - 1)\varphi_0$ ) . . . . .	308
7.1. Phase unwrapping . . . . .	312
7.2. Calibration methods for reference phase shifters . . . . .	316
§ 8. RELEVANT DATA AND MERIT FUNCTIONS . . . . .	320
§ 9. CALIBRATION METHODS FOR INTERFEROMETERS . . . . .	324
§ 10. APPLICATIONS . . . . .	326
10.1. Optical testing and flatness tests . . . . .	326
10.2. Microstructure measurements . . . . .	329
10.3. Shape measurements of ground surfaces . . . . .	330
10.4. Moiré topography . . . . .	332
10.5. Measurement of refractive index distributions . . . . .	333
10.6. Two-wavelength interferometry . . . . .	333
10.7. Holographic interferometry . . . . .	334
10.8. Wavefront sensors for adaptive optics . . . . .	336
10.8.1. Shearing sensors . . . . .	336
10.8.2. Point reference sensors . . . . .	336
10.9. Speckle interferometry . . . . .	337
10.10. Miscellaneous . . . . .	339
§ 11. ERROR SOURCES AND MEASURING LIMITATIONS . . . . .	339
11.1 Environmental error sources . . . . .	339
11.1.1. Air turbulence and stratification . . . . .	339
11.1.2. Thermal drifts and mechanical relaxation . . . . .	340
11.1.3. Mechanical strain . . . . .	342
11.1.4. Vibrations . . . . .	343
11.2. Errors depending on the evaluation method . . . . .	343
11.2.1. Reference phase errors . . . . .	343

11.3.	Errors typically encountered in interferometry . . . . .	346
11.3.1.	Errors due to spurious fringes . . . . .	346
11.3.2.	Detector noise . . . . .	347
11.3.3.	Quantization noise . . . . .	347
11.3.4.	Nonlinearities of the photodetector . . . . .	348
11.3.5.	Coherent noise . . . . .	348
11.4.	Optical limitations . . . . .	349
11.4.1.	Testing of smooth surfaces . . . . .	349
11.4.2.	Microstructure testing . . . . .	352
11.4.3.	Limitations in holographic interferometry . . . . .	352
ACKNOWLEDGEMENTS . . . . .		353
REFERENCES . . . . .		353

## V. QUANTUM JUMPS

by R.J. COOK (COLORADO SPRINGS, Co, USA)

§ 1.	INTRODUCTION . . . . .	363
§ 2.	ION TRAPPING AND COOLING . . . . .	368
§ 3.	THEORY OF TELEGRAPHIC FLUORESCENCE . . . . .	377
3.1.	Delay function for two-level atom . . . . .	378
3.2.	Interruption of fluorescence due to shelving . . . . .	383
3.3.	Delay function for the V-configuration . . . . .	387
3.4.	Delay function for the A-configuration . . . . .	396
§ 4.	THE NATURE OF QUANTUM JUMPS . . . . .	397
4.1.	Atomic dynamics during frequent measurements . . . . .	398
4.2.	Knowledge-induced transitions . . . . .	403
§ 5.	OBSERVATION OF QUANTUM JUMPS . . . . .	407
ACKNOWLEDGEMENTS . . . . .		413
REFERENCES . . . . .		414
AUTHOR INDEX . . . . .		417
SUBJECT INDEX . . . . .		427
CUMULATIVE INDEX, VOLUMES I-XXVIII . . . . .		431
