## I. GUIDED-WAVE OPTICS ON SILICON: PHYSICS, TECHNOLOGY AND STATUS

*by B. P. PAL (NEW DELHI, INDIA)*

§ 1.	INTRODUCTION . . . . .	3
§ 2.	PHYSICS AND ANALYSIS OF OPTICAL WAVEGUIDES . . . . .	6
	2.1. Planar waveguides . . . . .	6
	2.2. Power carried by a guided mode in a planar waveguide . . . . .	12
	2.3. Waveguiding in three-dimensional structures . . . . .	13
	2.4. Multilayer waveguides . . . . .	20
§ 3.	TECHNOLOGY OF SILICON-BASED OPTICAL WAVEGUIDES . . . . .	25
§ 4.	GUIDED-WAVE OPTICAL COMPONENTS ON SILICON . . . . .	38
§ 5.	ACTIVE WAVEGUIDES ON SILICON . . . . .	49
§ 6.	CONCLUSIONS . . . . .	50
	ACKNOWLEDGEMENTS . . . . .	51
	REFERENCES . . . . .	51

## II. OPTICAL NEURAL NETWORKS: ARCHITECTURE, DESIGN AND MODELS

*by FRANCIS T. S. YU (UNIVERSITY PARK, PA, USA)*

§ 1.	INTRODUCTION . . . . .	63
§ 2.	OPTICAL ASSOCIATIVE MEMORY . . . . .	66
§ 3.	OPTICAL NEURAL NETWORKS . . . . .	69
	3.1. Two-dimensional implementation . . . . .	69
	3.2. LCTV-based optical neural networks . . . . .	71
	3.3. Compact optical neural networks . . . . .	73
	3.4. Mirror-array interconnected neural networks . . . . .	74
	3.5. Optical disk-based neural networks . . . . .	77
§ 4.	NEURAL NETWORK MODELS . . . . .	80
	4.1. Hopfield model . . . . .	81
	4.2. Back-propagation model . . . . .	83
	4.3. Orthogonal-projection model . . . . .	84
	4.4. Multilevel recognition model . . . . .	87
	4.5. Interpattern-association model . . . . .	89
	4.6. Hetero-association model . . . . .	96
	4.7. Space time-sharing model . . . . .	100

§ 5.	REDUNDANT INTERCONNECTION NEURAL NETWORKS . . . . .	105
5.1.	Redundant-interconnection IPA model . . . . .	106
5.2.	Minimum redundant IPA model . . . . .	108
5.3.	Simulated and experimental results . . . . .	110
§ 6.	OPTICAL IMPLEMENTATION OF HAMMING NETS . . . . .	113
6.1.	Hamming net model . . . . .	114
6.2.	Optical implementation . . . . .	117
6.3.	Experimental demonstrations . . . . .	120
§ 7.	INFORMATION STORAGE CAPACITY . . . . .	121
7.1.	Upper bound . . . . .	123
7.2.	Lower bound . . . . .	125
7.3.	Moment-invariant neurocomputing . . . . .	126
§ 8.	SELF-ORGANIZING OPTICAL NEURAL NETWORKS . . . . .	131
8.1.	Kohonen's feature map . . . . .	131
8.2.	Unsupervised learning . . . . .	135
§ 9.	CONCLUSION . . . . .	142
	REFERENCES . . . . .	143

### III. THE THEORY OF OPTIMAL METHODS FOR LOCALIZATION OF OBJECTS IN PICTURES

by L. P. YAROSLAVSKY (BETHESDA, MD, USA)

§ 1.	INTRODUCTION . . . . .	147
§ 2.	THE ACCURACY AND RELIABILITY OF THE LOCALIZATION OF TWO-DIMENSIONAL OBJECTS ON A PLANE . . . . .	149
2.1.	Localization of a single object in the presence of additive white Gaussian noise: optimal localization device and two types of localization errors . . . . .	149
2.2.	Localization of a single object in the presence of additive white Gaussian noise: potential accuracy of coordinate measurements . . . . .	152
2.3.	Localization of a single object in the presence of additive Gaussian noise: measurement accuracy for non-optimal estimator; localization in non-white noise . . . . .	156
2.4.	Optimal localization in color pictures . . . . .	159
2.5.	Localization of an object in the presence of additive Gaussian noise: reliability of coordinate measurements . . . . .	162
2.6.	Localization reliability in the presence of additive white Gaussian noise: more accurate estimation and approximation of the localization error distribution density . . . . .	165
2.7.	Localization reliability in the presence of additive white Gaussian noise and multiple outside objects . . . . .	169
§ 3.	LOCALIZATION OF OBJECTS ON A COMPLEX BACKGROUND WITH A MINIMUM OF ANOMALOUS ERRORS . . . . .	172
3.1.	Formulation of the problem . . . . .	172
3.2.	Localization of an exactly known object for the spatially homogeneous optimality criterion . . . . .	174
3.3.	Localization of inexactly known objects . . . . .	181
3.4.	Reliable localization for spatially inhomogeneous objects . . . . .	185

3.5. Reliable localization in blurred pictures . . . . .	187
3.6. Optimal localization in multicomponent pictures with cluttered background . . . . .	188
3.7. Phase-only-, binary phase-only-, minimum average correlation energy-, entropy-optimized, and other filters for optical pattern recognition; reliable localization and picture contours . . . . .	189
3.8. Selection of reference objects from the standpoint of localization reliability . . . . .	196
§ 4. CONCLUSION . . . . .	199
ACKNOWLEDGEMENTS . . . . .	200
REFERENCES . . . . .	200

#### IV. WAVE PROPAGATION THEORIES IN RANDOM MEDIA BASED ON THE PATH-INTEGRAL APPROACH

by M. I. CHARNOTSKII, J. GOZANI, V. I. TATARSII AND V. U. ZAVOROTNY (BOULDER, CO, USA)

§ 1. INTRODUCTION . . . . .	205
§ 2. PROBLEM FORMULATION AND GOVERNING EQUATIONS . . . . .	209
2.1. Parabolic equation for a field in a random medium . . . . .	209
2.2. Moment equations . . . . .	211
2.3. Plane-wave-type fourth-moment equations . . . . .	214
2.4. Generalization of the problem . . . . .	215
§ 3. INTRODUCTION TO PATH INTEGRALS . . . . .	217
3.1. Derivation of path-integral representation of the parabolic equation solution . . . . .	217
3.2. Unconditional and conditional path integrals . . . . .	220
3.3. The probabilistic interpretation . . . . .	221
3.4. Phase-space path integral . . . . .	227
§ 4. PATH-INTEGRAL REPRESENTATIONS OF WAVE FIELDS IN INHOMOGENEOUS MEDIA . . . . .	229
4.1. Basic unconditional and conditional Feynman path-integral representations . . . . .	229
4.2. Velocity representation for path-integral variables . . . . .	231
4.3. Variational operator representation . . . . .	233
4.4. Plane-wave expansion . . . . .	234
4.5. Orthogonal expansion of paths . . . . .	237
§ 5. PATH-INTEGRAL REPRESENTATIONS OF MOMENTS . . . . .	241
5.1. Second-moment path-integral representations . . . . .	242
5.2. Fourth-moment path-integral representations . . . . .	244
5.2.1. Spherical wave expansion . . . . .	244
5.2.2. The outgoing plane-wave expansion . . . . .	246
5.2.3. The incoming plane-wave expansion . . . . .	248
5.2.4. The mixed plane-wave expansion . . . . .	249
§ 6. THE CONNECTION BETWEEN HEURISTIC APPROXIMATIONS AND PATH-INTEGRAL REPRESENTATIONS . . . . .	251
6.1. Heuristic field approximations . . . . .	251
6.2. Fourth-moment heuristic approximations . . . . .	254
6.3. An orthogonal expansion of the path integral for the fourth moment . . . . .	257
§ 7. CONCLUSIONS . . . . .	261
ACKNOWLEDGEMENTS . . . . .	262
REFERENCES . . . . .	262

## V. RADIATION BY UNIFORMLY MOVING SOURCES

**Vavilov–Cherenkov effect, Doppler effect in a medium, transition radiation and associated phenomena***by V. L. GINZBURG (MOSCOW, RUSSIA)*

§ 1. INTRODUCTION . . . . .	269
§ 2. VAVILOV–CHERENKOV EFFECT FOR A CHARGE . . . . .	271
§ 3. QUANTUM THEORY OF THE VAVILOV–CHERENKOV EFFECT . . . . .	277
§ 4. VAVILOV–CHERENKOV RADIATION IN THE CASE OF MOTION IN CHANNELS AND GAPS . . . . .	279
§ 5. VAVILOV–CHERENKOV RADIATION FOR ELECTRIC, MAGNETIC AND TOROIDAL DIPOLES . . . . .	281
§ 6. CLASSICAL AND QUANTUM THEORIES OF THE DOPPLER EFFECT IN A MEDIUM . . . . .	288
§ 7. ACCELERATION RADIATION . . . . .	292
§ 8. TRANSITION RADIATION AT THE BOUNDARY BETWEEN TWO MEDIA . . . . .	294
§ 9. TRANSITION RADIATION AS A MORE GENERAL PHENOMENON. FORMATION ZONE . . . . .	299
§ 10. TRANSITION SCATTERING. TRANSITION BREMSSTRAHLUNG . . . . .	303
§ 11. TRANSITION RADIATION, TRANSITION SCATTERING AND TRANSITION BREMSSTRAHLUNG IN A PLASMA . . . . .	306
§ 12. CONCLUDING REMARKS . . . . .	309
REFERENCES . . . . .	311

## VI. NONLINEAR OPTICAL PROCESSES IN ATOMS AND IN WEAKLY RELATIVISTIC PLASMAS

*by G. MAINFRAY AND C. MANUS (GIF SUR YVETTE, FRANCE)*

§ 1. INTRODUCTION . . . . .	315
§ 2. LASER LIGHT POLARIZATION EFFECTS . . . . .	316
§ 3. RESONANCE EFFECTS . . . . .	317
§ 4. LASER TEMPORAL-COHERENCE EFFECTS IN NONRESONANT MULTIPHOTON IONIZATION OF ATOMS . . . . .	321
4.1. General discussion . . . . .	321
4.2. Comparison with experiments . . . . .	325
4.2.1. The two-mode case . . . . .	326
4.2.2. The multimode case . . . . .	328
§ 5. LASER TEMPORAL-COHERENCE EFFECTS IN RESONANT MULTIPHOTON IONIZATION OF ATOMS . . . . .	332
§ 6. RELATIVISTIC SELF-FOCUSING OF A LASER PULSE IN A PLASMA . . . . .	335
6.1. Recent possibility of observing new physical effects . . . . .	335
6.2. Self-trapping of a long laser pulse in a plasma in equilibrium with the laser field . . . . .	336
6.3. Self-focusing and self-trapping of ultra-short laser pulses . . . . .	342
6.3.1. Self-focusing due to relativistic effects . . . . .	342
6.3.2. Relativistic and ponderomotive effects in self-focusing . . . . .	345
6.3.3. Potential representation . . . . .	348
6.3.4. Recent developments . . . . .	351
6.4. General discussion and conclusions . . . . .	355
REFERENCES . . . . .	358
AUTHOR INDEX . . . . .	363
SUBJECT INDEX . . . . .	373
CUMULATIVE INDEX . . . . .	377
