I. THE IMBEDDING METHOD IN STATISTICAL BOUNDARY-VALUE WAVE PROBLEMS

by V. I. KLYATSKIN (MOSCOW, RUSSIA AND VLADIVOSTOK, RUSSIA)

§ 1. INTRODUCTION	3
§ 2. MULTIDIMENSIONAL STATIONARY PROBLEMS	6
2.1. Formulation of boundary-value wave problems	6
2.2. Imbedding equations	9
2.3. Statistical averaging	14
§ 3. PLANE WAVES IN LAYERED RANDOM MEDIA	17
3.1. Formulation of boundary-value wave problems	17
3.1.1. Wave incidence on the medium layer	17
3.1.2. Source of plane waves inside the medium	20
3.2. Imbedding method in one-dimensional wave problems	23
3.2.1. A wave incident on the layer	23
3.2.2. Source location inside the layer of an inhomogeneous medium	30
3.3. Statistical description	32
3.3.1. Coefficients of reflection and transmission	33
3.3.1.1. Nondissipative medium	34
3.3.1.2. Dissipative medium	40
3.3.2. Source inside the layer of a medium	40
3.3.3. Energy localization in the statistical problem	41
3.3.4. Diffusive approximation	43
3.4. Statistical description of wavefields	45
3.4.1. Wave incidence on the layer of the medium	45
3.4.1.1. Nondissipative medium	47
3.4.1.2. Dissipative medium	54
3.4.2. Source in infinite space	57
3.4.3. Numerical modelling	59
3.5. Eigenvalue statistics	63
3.5.1. Common relationships	63
3.5.2. Statistical averaging	64
3.5.3. Numerical modelling	67
§ 4. MULTIDIMENSIONAL WAVE PROBLEMS IN LAYERED RANDOM MEDIA	69
4.1. Nonstationary problems	69
4.1.1. Formulation of boundary-wave problems	69
4.1.2. Imbedding equations	71
4.1.3. Statistical description	73
4.1.4. Layer of finite thickness	78
4.2. Point source inside a layered random medium	79
4.2.1. Factorization of the wave equation	79

4.2.2. Parabolic equation	81
4.2.3. General case	84
ACKNOWLEDGEMENTS	86
APPENDIX	86
A. STATISTICAL DESCRIPTION OF DYNAMICAL SYSTEMS	86
A.1. The fokker-planck equation and its boundary conditions	86
A.2. Caustics in random media	92
A.2.1. General remarks	92
A.2.2. Statistical description	94
B. DYNAMICAL PROPERTIES OF THE WIENER AND LOGNORMAL RANDOM PROCESSES	98
B.1. General remarks	98
B.2. Majorant curves	103
B.3. Statistics of a random area	105
B.4. Isoprobable curve	107
B.5. Some examples	108
B.5.1. Stochastic parametric resonance	108
B.5.2. Wave-beam propagation in a random parabolic waveguide	110
C. FUNDAMENTAL SOLUTIONS OF WAVE PROBLEMS	115
D. FACTORIZATION OF THE WAVE EQUATION IN A LAYERED MEDIUM	118
REFERENCES	121

II. QUANTUM STATISTICS OF DISSIPATIVE NONLINEAR OSCILLATORS

by V. PEŘINOVÁ AND A. LUKŠ (OLOMOUC, CZECH REPUBLIC)

§ 1. INTRODUCTION	131
§ 2. DISSIPATIVE THIRD-ORDER NONLINEAR OSCILLATOR	132
2.1. Quantum dynamics	133
2.2. Photon statistics	138
2.3. Quantum coherence	139
2.4. Squeezed states	142
2.5. Phase properties	151
2.6. Special initial states	155
2.6.1. The coherent state	156
2.6.2. The SU(1,1) coherent state	165
2.6.3. Gaussian mixed and pure states	167
2.6.4. The SU(1,1) two-photon coherent state	171
2.6.5. The k -photon coherent state	171
2.6.6. Squeezed and displaced number states	171
2.7. Optically bistable two-photon medium	173
2.8. Two-level atom in a Kerr medium	175
2.9. Interaction of an electromagnetic field with a Kerr medium	178
§ 3. HIGHER-ORDER NONLINEAR OSCILLATORS	184
§ 4. COUPLED DISSIPATIVE THIRD-ORDER NONLINEAR OSCILLATORS	185
§ 5. USE OF A KERR MEDIUM FOR GENERATION AND DETECTION OF NONCLASSICAL STATES	194
ACKNOWLEDGEMENT	198
REFERENCES	198

III. GAP SOLITONS

by C. MARTIJN DE STERKE (SYDNEY, AUSTRALIA) AND J. E. SIPE (TORONTO, CANADA)

§ 1. INTRODUCTION	205
§ 2. QUALITATIVE DESCRIPTION	208
§ 3. COUPLED-MODE THEORY	212
§ 4. STATIONARY SOLUTIONS	217
§ 5. SOLITARY-WAVE SOLUTIONS	225
§ 6. MULTIPLE SCALES	230
§ 7. DISCUSSION OF ANALYTIC RESULTS	237
§ 8. NUMERICAL RESULTS	239
§ 9. THE COUPLING PROBLEM	244
§ 10. EXPERIMENTAL GEOMETRIES	253
§ 11. OUTLOOK	256
ACKNOWLEDGEMENTS	258
REFERENCES	259

IV. DIRECT SPATIAL RECONSTRUCTION OF OPTICAL PHASE FROM PHASE-MODULATED IMAGES

by VALENTIN I. VLAD AND DANIEL MALACARA (LEÓN, Gto., MÉXICO)

§ 1. INTRODUCTION	263
§ 2. DIRECT SPATIAL RECONSTRUCTION OF OPTICAL PHASE (DSROP) FROM FRINGE PATTERNS	265
2.1. Phase demodulation in the space domain	266
2.2. Phase demodulation in the spatial frequency (Fourier) domain	272
2.3. Phase unwrapping and representation	278
§ 3. DIRECT SPATIAL RECONSTRUCTION OF OPTICAL PHASE (DSROP) FROM MORE GENERAL PHASE-MODULATED IMAGES	281
3.1. DSROP with a chirped radially symmetric pattern	282
3.2. DSROP with a sheared periodic pattern	284
3.3. DSROP with an arbitrary deterministic reference image	287
3.4. DSROP with an arbitrary random reference image	291
§ 4. DIRECT SPATIAL RECONSTRUCTION OF OPTICAL PHASE (DSROP) FOR TIME- AND SPACE-PHASE-MODULATED IMAGES	294
4.1. Real-time method	294
4.2. Double-exposure method	296
§ 5. AN OVERVIEW OF DSROP METHODS. RANGE OF MEASUREMENT, ACCURACY AND SPEED	298
5.1. A systematic classification of DSROP methods	298
5.2. The range of measurement, accuracy and speed of DSROP methods	299
§ 6. APPLICATIONS OF THE METHODS OF DSROP	302
6.1. Optical testing	302
6.2. Opto-mechanical testing and profilometry	303
6.3. Optical diagnosis of inhomogeneous transparent materials	308
§ 7. CONCLUDING REMARKS	311
ACKNOWLEDGEMENTS	313
REFERENCES	313

V. IMAGING THROUGH TURBULENCE IN THE ATMOSPHERE
by MARK J. BERAN AND JASMIN OZ-VOGT (RAMAT AVIV, ISRAEL)

§ 1.	INTRODUCTION	321
1.1.	Long exposures	322
1.2.	Isoplanicity	324
1.3.	Short exposures	326
1.3.1.	Adaptive optics	327
1.3.2.	Speckle interferometry and speckle masking	328
1.3.3.	Shift-and-add method	329
1.4.	General approach	330
§ 2.	PROPAGATION OF LIGHT THROUGH THE ATMOSPHERE	330
2.1.	Statistical properties of the index-of-refraction field in the atmosphere	331
2.2.	Propagation of the coherence functions in the atmosphere	334
2.2.1.	Definition of the coherence functions	336
2.2.2.	Equations governing the coherence functions Γ_2 and Γ_4	337
2.2.3.	Solution of the equation governing the two-point coherence function	339
2.2.4.	Solution of the equation governing the four-point coherence function	342
2.3.	Two-point phase and log-amplitude coherence functions	349
2.3.1.	Use of Gaussian statistics	351
2.4.	Isoplanicity	352
2.4.1.	Horizontal propagation paths	355
2.5.	Summary of results of § 2 and their importance to the imaging problem	355
§ 3.	IMAGING OF OBJECTS IN THE TURBULENT ATMOSPHERE	358
3.1.	Basic imaging equations	358
3.1.1.	Long exposures	359
3.1.2.	Short exposures	363
3.2.	Long-exposure image-processing techniques	364
3.2.1.	Space-based systems imaging ground objects	365
3.2.2.	Horizontal paths within the atmosphere	366
3.2.3.	Inversion procedures	367
3.3.	Short-exposure image-processing techniques	370
3.3.1.	Adaptive optics	371
3.3.2.	Image sharpening	373
3.3.3.	Speckle interferometry	374
3.3.4.	Speckle masking (triple correlation theory)	378
3.3.5.	Intensity correlations and the three-point correlation function	380
3.3.6.	Shift-and-add method	382
3.4.	Concluding remarks	382
	REFERENCES	383

VI. DIGITAL HALFTONING: SYNTHESIS OF BINARY IMAGES
by OLOF BRYNGDAHL, THOMAS SCHEERMESSE AND FRANK WYROWSKI (ESSEN, GERMANY)

§ 1.	INTRODUCTION AND TRENDS	391
1.1.	Digital techniques on advance	391
1.2.	Narrowing the subject to image characterization	391
1.3.	The halftone technique	392
1.4.	Digital halftoning – a new branch of image synthesis	392

1.5. Three generations of electronic halftoning	394
§ 2. THE QUANTIZATION PART OF AN IMAGE-PROCESSING SYSTEM	394
2.1. The model considered	394
2.2. Analysis of the model	398
§ 3. SPECTRAL CHARACTERISTICS OF BINARIZATION TECHNIQUES	400
3.1. Passive halftone techniques	401
3.1.1. Binarization by constant threshold	401
3.1.2. Binarization by carrier techniques	403
3.1.3. Influence of sampling on passive techniques	405
3.2. Active direct halftone techniques	408
3.2.1. Phase-modulated carrier procedure	409
3.2.2. Error-diffusion procedure	409
3.3. Active iterative halftone techniques	412
3.3.1. Definition of iterative techniques	413
3.3.2. Iterative Fourier transform algorithm	413
3.3.3. Simulated annealing algorithm	417
3.3.4. Neural-network algorithms	417
3.4. Foundations for analysis of halftone techniques	419
§ 4. ANALYSIS OF HALFTONE PROCEDURES WITH EXCESSIVE RESOLUTION	423
4.1. Transfer function and quality criteria	424
4.2. Carrier method	425
4.2.1. Carrier with integer period ratio between carrier and raster	425
4.2.2. Carrier with noninteger period ratio between carrier and raster	427
4.3. Error-diffusion method	431
4.4. Iterative Fourier transform method	436
4.5. Comparative remarks on quantization methods	438
4.6. Modification of residual detected noise	439
§ 5. HALFTONE PROCEDURES WITH RESTRICTED RESOLUTION BELOW SAMPLING RASTER	442
5.1. Adaptation of noise spectrum to transfer function	443
5.2. Adjustment of halftone procedure to image spectrum	447
5.2.1. Error-diffusion procedure	449
5.2.2. Iterative procedure	450
5.2.3. Control of phase in spectrum	453
§ 6. HALFTONE RESOLUTION IN EXCESS OF SAMPLING RASTER	456
6.1. Perception of halftone dots	456
6.2. Formation of halftone dots	458
6.3. Overlap of halftone dots	458
6.4. Errors in position and shape of halftone dots	459
§ 7. SYSTEM CONSIDERATIONS OF IMAGE QUANTIZATION GAIN IN IMPORTANCE	460
ACKNOWLEDGEMENTS	461
