

## CONTENTS

### I. QUANTUM INTERFERENCE, SUPERPOSITION STATES OF LIGHT, AND NONCLASSICAL EFFECTS

*by V. BUŽEK (BRATISLAVA, SLOVAKIA), AND P. L. KNIGHT (LONDON, ENGLAND)*

§ 1.	INTRODUCTION . . . . .	3
§ 2.	PHYSICS IN PHASE SPACE . . . . .	7
2.1.	Phase-space formalism in classical physics . . . . .	7
2.2.	Phase-space formalism in quantum mechanics . . . . .	10
2.2.1.	Characteristic functions . . . . .	11
2.2.2.	Quasiprobability distributions . . . . .	13
2.3.	Pure versus mixture states: Quantum-mechanical entropy . . . . .	14
§ 3.	QUANTUM INTERFERENCE IN PHASE SPACE . . . . .	17
3.1.	Semiclassical approximation . . . . .	18
3.2.	Superpositions of Fock states . . . . .	22
§ 4.	SUPERPOSITIONS OF COHERENT STATES . . . . .	29
4.1.	General Formalism . . . . .	29
4.2.	Superpositions of two coherent states . . . . .	32
4.2.1.	Nonclassical properties of the even CS . . . . .	33
4.2.2.	Nonclassical properties of the odd CS . . . . .	37
4.2.3.	Nonclassical properties of the Yurke-Stoler CS . . . . .	39
4.3.	One-dimensional continuous superpositions of coherent states . . . . .	41
4.4.	Phase of superposition states . . . . .	42
4.4.1.	Phase probability distributions (PPD) . . . . .	42
4.4.2.	PPD for superpositions of coherent states . . . . .	44
4.4.3.	Phase properties of pair coherent states . . . . .	48
4.5.	Coarsening of the phase-space description . . . . .	52
§ 5.	SUPERPOSITION STATES IN RESERVOIRS . . . . .	55
5.1.	Master equation and its solution . . . . .	58
5.2.	Dissipation in zero-temperature reservoir . . . . .	62
5.2.1.	Decay of the fourth-order squeezing . . . . .	67
5.3.	Decay of quantum coherences in phase-sensitive reservoirs . . . . .	70
5.3.1.	Phase properties of even CS decaying into squeezed reservoirs . . . . .	72
5.3.2.	RWA and the master equation . . . . .	74
5.4.	Amplification with phase-sensitive amplifiers . . . . .	77
5.5.	Coarsening and decay . . . . .	80
§ 6.	PRODUCTION OF SCHRÖDINGER CATS . . . . .	83
6.1.	Schrödinger cats by means of amplitude dispersion . . . . .	83
6.2.	Schrödinger cats in micromasers: Cotangent states . . . . .	86
6.3.	Schrödinger cats by means of quantum-nondemolition scheme based on a “dispersive atomic probe” . . . . .	88

6.4. Superposition states in micromasers by means of conditional measurements . . . . .	94
6.5. Superposition states by means of continuous photodetection . . . . .	97
6.6. Superposition states by means of optical-back action evasion . . . . .	99
6.7. Schrödinger cats by means of the resonant atom-field interaction . . . . .	102
6.8. Other methods proposed for production of superposition states of light . . . . .	108
§ 7. DETECTION OF SCHRÖDINGER CATS . . . . .	111
7.1. Homodyne detection . . . . .	111
7.2. DAP-QND detection scheme . . . . .	113
7.3. Optical homodyne tomography method . . . . .	117
ACKNOWLEDGEMENTS . . . . .	119
APPENDIX . . . . .	119
A. SQUEEZING OF QUANTUM FLUCTUATIONS . . . . .	119
A.1. Second-order squeezing . . . . .	120
A.2. Higher order squeezing . . . . .	121
A.3. Sub-Poissonian photon statistics . . . . .	122
B. BASIC EXAMPLES OF NONCLASSICAL STATES OF LIGHT . . . . .	123
B.1. Fock states . . . . .	124
B.2. Coherent states . . . . .	124
B.3. Squeezed states . . . . .	126
C. BASIC IDEAS OF QND . . . . .	128
D. SHORT REVIEW OF PEGG-BARNETT FORMALISM . . . . .	129
E. MORE ON THE WIGNER FUNCTION . . . . .	132
F. JAYNES-CUMMINGS MODEL . . . . .	142
F.1. Eigenvalues of the reduced field density operator . . . . .	142
F.2. Approximate analytical solution of the JCM . . . . .	144
REFERENCES . . . . .	145

## II. WAVE PROPAGATION IN INHOMOGENEOUS MEDIA: PHASE-SHIFT APPROACH

*by L. P. PRESNYAKOV (Moscow, Russia)*

§ 1. INTRODUCTION . . . . .	161
§ 2. BASIC EQUATIONS . . . . .	163
§ 3. THE BOHR-SOMMERFELD PRINCIPLE AND THE LEVINSON THEOREM . . . . .	165
§ 4. SOLUTION OF THE WAVE EQUATION FOR TRANSPARENT STRATIFIED MEDIA . . . . .	168
4.1. Reflection coefficient and field amplitudes . . . . .	168
4.2. Short-wave limit . . . . .	170
4.3. Fresnel reflection and quarter-wave plate . . . . .	171
§ 5. SYMMETRIC MEDIUM . . . . .	172
5.1. Transition and reflection coefficients . . . . .	172
5.2. Non-reflecting layer . . . . .	174
§ 6. SYMMETRIC LAYER WITH NEGATIVE VALUES OF THE DIELECTRIC CONSTANT . . . . .	174
§ 7. CONCLUSIONS . . . . .	178
ACKNOWLEDGEMENTS . . . . .	179
APPENDIX A. Phase equation in the theory of potential scattering . . . . .	179
REFERENCES . . . . .	180

**III. THE STATISTICS OF DYNAMIC SPECKLES**  
*by T. OKAMOTO AND T. ASAKURA (SAPPORO, JAPAN)*

§ 1.	INTRODUCTION . . . . .	185
§ 2.	SPATIOTEMPORAL PROPERTIES OF DYNAMIC SPECKLE PATTERNS . . . . .	186
2.1.	Basic formulation . . . . .	186
2.1.1.	Spacetime cross-correlation function of the speckle intensity . . . . .	186
2.1.2.	Free-space geometry . . . . .	189
2.1.3.	Imaging geometry . . . . .	190
2.2.	Characteristics of speckle motion . . . . .	192
2.2.1.	Translation and boiling . . . . .	192
2.2.2.	Translation distance and correlation distance . . . . .	194
2.2.3.	Power spectrum of intensity fluctuations . . . . .	201
2.3.	Properties of integrated intensity . . . . .	201
2.4.	Effects of surface roughness . . . . .	204
§ 3.	THREE-DIMENSIONAL MOTION OF DIFFUSE OBJECTS . . . . .	205
3.1.	Rotational motion . . . . .	206
3.2.	Longitudinal motion . . . . .	208
3.3.	Comparison between lateral and longitudinal motions . . . . .	211
§ 4.	POLYCHROMATIC LIGHT ILLUMINATION . . . . .	214
4.1.	Nonstationary spatial structure . . . . .	214
4.2.	Cross-spectral correlation function . . . . .	215
4.3.	Temporal fluctuations in polychromatic speckle patterns . . . . .	219
§ 5.	SPECKLED SPECKLES . . . . .	225
5.1.	Historical background . . . . .	225
5.2.	Illumination with static speckle patterns . . . . .	227
5.3.	Illumination with dynamic speckle patterns . . . . .	233
5.3.1.	Fresnel region . . . . .	234
5.3.2.	Image region . . . . .	239
§ 6.	CONCLUDING REMARKS . . . . .	245
REFERENCES . . . . .		246

**IV. SCATTERING OF LIGHT FROM MULTILAYER SYSTEMS WITH ROUGH  
BOUNDARIES**

*by I. OHLÍDAL, K. NAVRÁTIL AND M. OHLÍDAL (BRNO, CZECH REPUBLIC)*

§ 1.	INTRODUCTION . . . . .	251
§ 2.	Theory . . . . .	251
2.1.	Physical models of rough boundaries . . . . .	252
2.2.	Theories of effective medium . . . . .	255
2.3.	Perturbation theories . . . . .	261
2.4.	Diffraction theories . . . . .	270
2.4.1.	Single layer . . . . .	272
2.4.2.	Multilayer system . . . . .	279
2.5.	X-ray scattering from the rough multilayer . . . . .	287
2.6.	Discussion of the theoretical approaches . . . . .	290
§ 3.	EXPERIMENTS . . . . .	291
3.1.	Rough surface . . . . .	291
3.1.1.	Interferometric methods . . . . .	291

3.1.2. Microdensitometric method . . . . .	293
3.1.3. Photometric methods . . . . .	294
3.1.4. Ellipsometric methods . . . . .	297
3.1.5. Speckle methods . . . . .	301
3.2. Rough single layer . . . . .	302
3.2.1. Photometric methods . . . . .	302
3.2.2. Ellipsometric methods . . . . .	308
3.3. Multilayer system with rough boundaries . . . . .	312
§ 4. CONCLUSION . . . . .	326
ACKNOWLEDGEMENTS . . . . .	328
REFERENCES . . . . .	328

## V. RANDOM WALK AND DIFFUSION-LIKE MODELS OF PHOTON MIGRATION IN TURBID MEDIA

by A. H. GANDJBAKHCHE AND G. H. WEISS (BETHESDA, MD, USA)

§ 1. INTRODUCTION . . . . .	335
§ 2. ELEMENTS OF RANDOM WALK AND DIFFUSION THEORY . . . . .	337
2.1. Random walk theory . . . . .	337
2.2. Passage to the diffusion limit . . . . .	345
§ 3. RANDOM WALK ON A SIMPLE CUBIC LATTICE . . . . .	347
3.1. Derivation of measurable results . . . . .	347
§ 4. SCALING RELATIONSHIPS . . . . .	354
4.1. Isotropic scattering . . . . .	354
4.2. Anisotropic scattering . . . . .	356
4.3. Boundary conditions . . . . .	359
4.4. Internal reflection effects . . . . .	361
§ 5. SELECTED APPLICATIONS TO MACROSCOPICALLY HOMOGENEOUS MEDIA . . . . .	364
5.1. Laser Doppler flowmetry . . . . .	364
5.2. Spectroscopic applications . . . . .	369
5.3. Evaluation of the performance of an optical imaging system . . . . .	377
§ 6. OPTICAL INFORMATION RELATED TO INTERNAL INHOMOGENEITIES . . . . .	385
6.1. The exact enumeration method . . . . .	385
6.2. Strata with differing material properties . . . . .	386
6.3. Photon migration fractal media . . . . .	391
6.4. Detection of hidden bodies by transillumination experiments . . . . .	394
§ 7. SUMMARY . . . . .	398
ACKNOWLEDGEMENTS . . . . .	399
REFERENCES . . . . .	399
AUTHOR INDEX . . . . .	403
SUBJECT INDEX . . . . .	413
CONTENTS OF PREVIOUS VOLUMES . . . . .	417
CUMULATIVE INDEX . . . . .	425
