

Contents

1. Ray Optics	1
1.1 Reflection and Refraction	1
Refraction	1
Index of Refraction	1
Reflection	2
Total Internal Reflection	3
Reflecting Prisms	4
1.2 Imaging	5
Spherical Surfaces	5
Object–Image Relationship	6
Use of the Sign Convention	8
Lens Equation	8
Classification of Lenses and Images	11
Spherical Mirrors	12
Thick Lenses	13
Image Construction	15
Magnification	16
Newton’s Form of the Lens Equation	17
Lagrange Invariant	18
Aberrations	19
2. Optical Instruments	20
2.1 The Eye (as an Optical Instrument)	20
2.2 Basic Camera	22
Photographic Emulsion	23
Sensitometry	25
Resolving Power	27
Depth of Field	28
2.3 Projection Systems	29
2.4 Hand Lens or Simple Magnifier	30
2.5 Microscope	32
2.6 Telescope	33
Pupils and Stops	33
Field Stop	35
Terrestrial Telescopes	35
2.7 Resolving Power of Optical Instruments	36
Camera	37
Telescope	37

X Contents

Microscope	38
2.8 Optical Waveguides	39
3. Light Sources and Detectors	43
3.1 Radiometry and Photometry	43
Radiometric Units	43
Photometric Units	45
Point Source	46
Extended Source	47
Diffuse Reflector	48
Image Illuminance	49
Image Luminance	51
3.2 Light Sources	53
Black Bodies	54
Color Temperature and Brightness Temperature	57
Line Sources	58
Light-Emitting Diodes (LED)	61
3.3 Detectors	62
Quantum Detectors	62
Thermal Detectors	67
Detector Performance Parameters	69
4. Wave Optics	73
4.1 Waves	73
Electromagnetic Waves	75
Complex Exponential Functions	75
4.2 Superposition of Waves	76
4.3 Interference by Division of Wavefront	77
Double-Slit Interference	78
Multiple-Slit Interference	80
4.4 Interference by Division of Amplitude	82
Two-Beam Interference	82
Multiple-Reflection Interference	83
4.5 Diffraction	85
Single-Slit Diffraction	87
Interference by Finite Slits	90
Fresnel Diffraction	90
Far and Near Field	93
Babinet's Principle	95
4.6 Coherence	96
Time Coherence	97
Spatial Coherence	99
Coherence of Thermal Sources	100
4.7 Theoretical Resolution Limit	100
Two-Point Resolution	100

Coherent Illumination	101
Diffused, Coherent Illumination	102
5. Interferometry and Related Areas	106
5.1 Diffraction Grating	106
Blazing	107
Chromatic Resolving Power	108
5.2 Michelson Interferometer	109
Twyman-Green Interferometer	111
5.3 Fabry-Perot Interferometer	112
Chromatic Resolving Power	112
Free Spectral Range	114
5.4 Multilayer Mirrors and Interference Filters	115
Quarter-Wave Layer	115
Multilayer Mirrors	116
Interference Filters	117
6. Holography and Fourier Optics	118
6.1 Holography	118
Off-Axis Holography	120
Zone-Plate Interpretation	122
Amplitude and Phase Holograms	123
Thick Holograms	124
6.2 Optical Processing	125
Abbe Theory	125
Fourier Series	128
Fourier-Transform Optics	130
Spatial Filtering	132
Phase Contrast	134
Matched Filter	136
6.3 Transfer Functions	138
Impulse Response	138
Optical Transfer Function	139
Coherent Transfer Function	141
Diffraction-Limited Transfer Functions	141
MTF of Photographic Films	143
7. Lasers	144
7.1 Amplification of Light	144
Optical Amplifier	145
7.2 Optically Pumped Laser	148
Output Power	150
Q-Switched Laser	151
Mode-Locked Laser	152

XII Contents

7.3 Optical Resonators	154
Transverse Modes	156
Gaussian Beams	158
Stability Diagram	160
Coherence of Laser Sources	161
7.4 Specific Laser Systems	162
Ruby Laser	162
Neodymium Laser	164
Organic-Dye Lasers	166
Helium-Neon Laser	167
Ion Lasers	168
CO ₂ Lasers	169
Other Gas Lasers	169
Semiconductor Lasers	169
8. Electromagnetic and Polarization Effects	171
8.1 Reflection and Refraction	171
Propagation	171
Brewster's Angle	172
Reflection	173
Internal Reflection	175
Interface Between two Dense Media	176
Reflection from Metals	176
8.2 Polarization	176
Birefringence	177
Wave Plates	179
Glan–Thompson and Nicol Prisms	180
Dichroic Polarizers	181
Optical Activity	182
8.3 Nonlinear Optics	182
Second-Harmonic Generation	183
Phase Matching	184
Optical Mixing	185
8.4 Electrooptics, Magneto optics and Acoustooptics	187
Kerr Effect	187
Pockels Effect	188
Electrooptic Light Modulation	189
Acoustooptic Beam Deflection	190
Faraday Effect	191
References	193
Subject Index	197
