INTRODUCTION			
Chapter 1. Early Line Broadening Theory			
1.1	The causes of line broadening (1895)	~ 1	
1.2	The Doppler effect in line broadening	<b>2</b>	
1.3	An application of the Fourier analysis to line broadening	4	
$\cdot 1.4$	The mean free path among equal spheres	7	
1.5	A first synthesis of Doppler and interruption effects	9	
1.6	The motion of a charged particle in a radiation field	12	
1.7	Equivalence of molecular collisions and a damping force	15	
1.8	Effect of collisions on the radiation absorption coefficient	17	
1.9	An alternate manner of obtaining the Lorentz result	20	
1.10	The end of the early period	22	
	Chapter 2. Interruption Broadening	24	
2.1	The Lenz appeal to correspondences	<b>24</b>	
2.2	The phase shift definition of a collision and half-width	<b>26</b>	
2.3	The physical phenomenon implied by the Lenz-Weisskopf result	28	
2.4	Line shift inclusion	29	
2.5	A specific evaluation of the Lenz half-width	38	
2.6	Line shift without collision time	39	
2.7	Reason for Weisskopf theory failure to yield shift	41	
2.8	Lindholm general theory to include collision time	44	
2.9	Specification of and approximations to the general theory	47	
2.10	Adiabaticity in line broadening	52	
2.11	Spitzer's rotational adiabaticity	55	
2.12	The correlation function	57	
2.13	The density matrix	64	
2.14	Another quantum justification of the Lorentz equation	66	
2.15	The quantum intensity distribution	70	
2.16	Another adiabatic theory	72	
2.17	Review and summary	74	
	Chapter 3. STATISTICAL BROADENING	76	
3.1	The Franck-Condon principle	76	
3.2	First application of Franck-Condon to line broadening	77	

CONTENTS

		page
3.3	Calculation of the van der Waals forces involved in broadening	79
3.4	Early developments of the statistical theory	84
3.5	The statistical line shape	88
3.6	The statistical shift and half-width	90
3.7	The Jablonski theory	90
3.8	A particular probability distribution	96
3.9	Review of the Jablonski theory to this point	99
3.10	Limiting cases and the matrix element $A$	100
3.11	The general system energy change probability	103
3.12	Double interaction curves and reduction to the Margenau line shape	107
3.13	The approximations of the Jablonski theory	109
3.14	A mild controversy, Lorentz-Jablonski equivalence	110
3.15	A more sophisticated statistical theory	112
3.16	The reduction of the correlation function	116
3.17	Review and summary	116
	Chapter 4. STARK BROADENING	118
4.1	Preliminary considerations	119
4.2	The probability of an electric field strength at the emitter	120
4.3	The introduction of specific field producers	123
4.4	The special case of the ion	126
4.5	The special case of the dipole	128
4.6	The special case of the quadrupole	130
4.7	The field probability function for the three special cases	131
4.8	General intensity distribution in a Stark broadened line	133
4.9	Line shape and half-widths according to early Stark theory	135
4.10	Review of Holtsmark's early Stark broadening theory	136
4.11	The field strength probability function with finite molecular dia-	
	meters	137
4.12	Dipole line shape from refined Stark broadening theory	143
4.13	A simplified version of the Holtsmark theory	144
4.14	Interaction between broadening electrons and ions	144
4.15	The Stark effect in parabolic coordinates	145
4.16	General treatment of the Stark effect	147
4.17	Quantum ionic Stark broadening for adiabatic Case I	149
4.18	The effect of a diabatic assumption	157
4.19	Quantum ionic Stark broadening for adiabatic Case II	161
4.20	Inclusion of different types of collisions in the ionic Stark theory	165
4.21	Review and prognosis	167
4.22	Quantum electron broadening of the Lyman alpha line	168
4.23	Quantum electron broadening of the Balmer lines	175
4.24	A classical path consideration to include degeneracy	177
4.25	The applicability of the classical treatment	182

VIII

	THE SHIFT AND SHAPE OF SPECTRAL LINES	IX
		page
4.26	Synthesis of electronic and ionic Stark broadening	185
4.27	The Baranger-Mozer treatment of electron and ion broadening	187
4.28	Review and summary	192
	Chapter 5. RESONANCE BROADENING	194
5.1	The qualitative basis of self broadening	194
5.2	The Holtsmark theory of coupled oscillators	195
5.3	Quantum resonance in binary interactions	199
5.4	The statistical resonance result	202
5.5	Resonance broadening by many molecules (Frenkel)	202
5.6	A linear relation between half-width and density	204
5.7	The Weisskopf resonance broadening theory	205
5.8	Review of self-broadening to this point	209
5.9	Qualitative consideration of the energy transfer theory	210
5.10	The classical energy transfer (low pressure)	212
5.11	Quantum treatment of low pressure self-broadening	220
5.12	High pressure quantum resonance broadening	227
5.13	Review and summary	231
	Chapter 6. MOLECULAR BROADENING	232
6.1	Early work on broadening of rotation-vibration lines	232
6.1 6.2	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect)	$\begin{array}{c} 232\\ 233 \end{array}$
$6.1 \\ 6.2 \\ 6.3$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$	232 233 238
$6.1 \\ 6.2 \\ 6.3 \\ 6.4$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect)	232 233 238 244
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic	232 233 238 244
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic oscillator	232 233 238 244 245
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \\ 6.6 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic oscillator Broadening by molecules with no permanent poles (dispersion effect)	232 233 238 244 245 246
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \\ 6.6 \\ 6.7 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic oscillator Broadening by molecules with no permanent poles (dispersion effect) Broadening by linear dipole molecules	232 233 238 244 245 246 249
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \\ 6.6 \\ 6.7 \\ 6.8 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic oscillator Broadening by molecules with no permanent poles (dispersion effect) Broadening by linear dipole molecules Interactions between symmetrical top dipole molecules	232 233 238 244 245 246 249 250
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \\ 6.6 \\ 6.7 \\ 6.8 \\ 6.9 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic oscillator Broadening by molecules with no permanent poles (dispersion effect) Broadening by linear dipole molecules Interactions between symmetrical top dipole molecules The broadening and shift due to the symmetrical top dipole inter-	232 233 238 244 245 246 249 250
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \\ 6.6 \\ 6.7 \\ 6.8 \\ 6.9 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic oscillator Broadening by molecules with no permanent poles (dispersion effect) Broadening by linear dipole molecules Interactions between symmetrical top dipole molecules The broadening and shift due to the symmetrical top dipole inter- action	232 233 238 244 245 246 249 250 253
$\begin{array}{c} 6.1 \\ 6.2 \\ 6.3 \\ 6.4 \\ 6.5 \\ 6.6 \\ 6.7 \\ 6.8 \\ 6.9 \\ 6.10 \end{array}$	Early work on broadening of rotation-vibration lines Interactions between rotating dipoles (directional effect) Rotational resonance and the case $J_1 = J_2 = 0$ Interaction between a deformable and a rigid dipole (induction effect) Interaction between a deformable rotator and an isotropic harmonic oscillator Broadening by molecules with no permanent poles (dispersion effect) Broadening by linear dipole molecules Interactions between symmetrical top dipole molecules The broadening and shift due to the symmetrical top dipole inter- action Broadening by the linear dipole molecule HCN	<ul> <li>232</li> <li>233</li> <li>238</li> <li>244</li> <li>245</li> <li>246</li> <li>249</li> <li>250</li> <li>253</li> <li>255</li> </ul>
