| <b>CHAPTER 2 Microwave–Microwave Double Resonance</b>  | <b>J. G. BAKER</b>   | <b>65</b>  |
| Introduction . . . . .   |                      | 65         |
| 1. Double Resonance and Level Populations . . . . .  |                      | 66         |
| 2. Double Resonance and Coherence Phenomena . . . . .  |                      | 69         |
| 3. Double Resonance Spectroscopy and Spectrometers. . . . .                                    |                      | 75         |
| 3.1. The AMDR Spectrometer . . . . .   |                      | 78         |
| 3.2. The FMDR Spectrometer . . . . .   |                      | 85         |
| 3.3. Cavity Spectrometers. . . . .   |                      | 91         |
| 3.4. Radiofrequency Double Resonance . . . . .   |                      | 92         |
| 3.5. The Enhancement of Forbidden Transitions . . . . .  |                      | 98         |
| 4. Molecular Collision Processes . . . . .   |                      | 104        |
| 4.1. NH <sub>3</sub> . . . . .   |                      | 106        |
| 4.2. H <sub>2</sub> CO . . . . .   |                      | 109        |
| 4.3. HCN . . . . .   |                      | 111        |
| 4.4. OCS . . . . .   |                      | 112        |
| 4.5. Other Molecules . . . . .   |                      | 114        |
| 5. Experiments in Pulsed Double Resonance . . . . .  |                      | 114        |
| 6. Theoretical Developments in Double Resonance . . . . .                                      |                      | 118        |
| 7. Further Developments in Double Resonance . . . . .  |                      | 120        |
| References . . . . .   |                      | 121        |
| <b>CHAPTER 3 Infrared–Microwave Double Resonance Techniques</b>                                | <b>H. JONES</b>      | <b>123</b> |
| 1. Introduction . . . . .  |                      | 124        |
| 1.1. Double Resonance Experiments . . . . .  |                      | 124        |
| 1.2. Types of Double Resonance Experiment . . . . .  |                      | 126        |
| 1.3. Laser Sources . . . . .   |                      | 128        |
| 2. Theoretical Considerations . . . . .  |                      | 133        |
| 2.1. Line-widths . . . . .   |                      | 133        |
| 2.2. Microwave Double Resonance: $\Delta\nu_p \gg \Delta\nu_D$ . . . . .                       |                      | 134        |
| 2.3. Infrared–Microwave Double Resonance . . . . .   |                      | 136        |
| 2.4. The High-frequency Stark Effect . . . . .   |                      | 141        |
| 2.5. Collisional Transitions Between Rotational Levels . . . . .                               |                      | 142        |
| 2.6. Two-photon Transitions . . . . .  |                      | 148        |
| 3. Experimental Considerations . . . . .   |                      | 153        |
| 3.1. Accidental Coincidences with Fixed Frequency IR Lasers . . . . .                          |                      | 153        |
| 3.2. Stark Tuning of Molecular Transitions . . . . .   |                      | 180        |
| 3.3. Partially Tunable Infrared Lasers . . . . .   |                      | 186        |
| 3.4. Two-photon Transitions . . . . .  |                      | 191        |
| 3.5. Double Resonance with Visible Region Lasers. . . . .                                      |                      | 203        |
| References . . . . .   |                      | 210        |
| <b>CHAPTER 4 Modern Submillimetre Microwave Scanning Spectroscopy</b>                          | <b>A. F. KRUPNOV</b> | <b>217</b> |
| 1. Introduction . . . . .  |                      | 217        |
| 2. Novel Developments in the Theory of Spectrometry with a Coherent Radiation Source . . . . . |                      | 221        |

|   |     |
|---|-----|
| 2.1. A New Method for Obtaining Sub-Doppler Resolution in Gas Spectrometers . . . . .   | 222 |
| 2.2. New Possibilities for Spectroscopic Measurements under Conditions of Spectral Line Saturation . . . . .  | 225 |
| 3. Modern Construction of RAD Spectrometers. . . . .  | 226 |
| 3.1. Scanning Sources of Submillimetre Coherent Radiation . . . . .   | 226 |
| 3.2. The Cell and the Detector . . . . .  | 235 |
| 4. Practical Methods of Investigation in Submillimetre Microwave Scanning Spectrometry . . . . .  | 241 |
| 5. Conclusion . . . . .   | 248 |
| References . . . . .  | 248 |
| Appendix 1. Calculation of Sub-Doppler Spectral Line-shapes . . . . .   | 251 |
| Appendix 2. Calculation of the Line-shape and Magnitude of the Signal from Lines in RSC Spectrometry under the Condition of Line Saturation . . . . . |     |
|   | 254 |

**CHAPTER 5 Interferometric Spectrometry at Millimetre and Submillimetre Wavelengths**

J. W. FLEMING 257

|  |     |
|--|-----|
| 1. Introduction . . . . .                                      | 257 |
| 2. The Merits of Interferometric Spectrometry . . . . .        | 259 |
| 3. The Experimental System . . . . .                           | 261 |
| 4. Mathematical Background of Fourier Spectrometry. . . . .    | 271 |
| 5. Computation of the Fourier Transform . . . . .              | 280 |
| 6. Examples of Submillimetre-wave Absorption Spectra . . . . . | 284 |
| 7. Conclusions . . . . .                                       | 307 |
| References . . . . .   | 307 |

**CHAPTER 6 Astrophysics of Interstellar Molecules**

G. WINNEWISER, E. CHURCHWELL AND C. M. WALMSLEY

313

|  |     |
|--|-----|
| 1. Introduction . . . . .  | 314 |
| 1.1. Interstellar Dust . . . . .                                       | 317 |
| 1.2. Neutral Gas in Interstellar Space . . . . .                       | 321 |
| 1.3. Mass Exchange between Stars and Interstellar Matter. . . . .      | 326 |
| 1.4. H II Regions . . . . .  | 328 |
| 1.5. Radiation Fields . . . . .  | 330 |
| 2. Radiative Transport in Molecular Lines . . . . .                    | 330 |
| 2.1. Notation and Equations . . . . .                                  | 331 |
| 2.2. The Statistical Equilibrium Equations . . . . .                   | 336 |
| 2.3. Radiative Transport in the Lines of CO . . . . .                  | 338 |
| 2.4. Transport Calculations for other Molecules . . . . .              | 340 |
| 2.5. Experimental Techniques: (Observational Considerations) . . . . . | 342 |
| 3. Molecule Formation Mechanisms . . . . .                             | 348 |
| 3.1. Surface Mechanisms . . . . .                                      | 348 |
| 3.2. Formation of H <sub>2</sub> on Grain Surfaces . . . . .           | 349 |
| 3.3. Ion-molecule Reactions . . . . .                                  | 351 |
| 3.4. HD Formation . . . . .  | 352 |
| 3.5. Ion-molecule Reactions in Dense Clouds . . . . .                  | 353 |
| 3.6. Electron Density in Molecular Clouds . . . . .                    | 354 |

|  |     |
|--|-----|
| 3.7. Predictions of the Ion-molecule Theory . . . . .  | 355 |
| 3.8. NH <sub>3</sub> , HCN, HNC and CN . . . . .   | 356 |
| 3.9. Detailed Models for Molecule Formation . . . . .  | 358 |
| 4. Isotope Ratios in Interstellar Clouds . . . . .   | 360 |
| 4.1. Isotopic Fractionation . . . . .  | 368 |
| 5. Observations . . . . .  | 371 |
| 5.1. The Orion Molecular Cloud . . . . .   | 373 |
| 5.2. The Sgr B2 Molecular Cloud . . . . .  | 385 |
| 5.3. Dark Dust Clouds . . . . .  | 396 |
| 5.4. Molecules in External Galaxies . . . . .  | 406 |
| 5.5. Molecular Lines at Optical and Ultraviolet Wavelengths . . . . .  | 409 |
| 6. Recent Molecular Identifications . . . . .  | 410 |
| 6.1. Formyl Ion (HCO <sup>+</sup> ) and Hydrogen Isocyanide (HNC) . . . . .                                  | 412 |
| 6.2. N <sub>2</sub> H <sup>+</sup> . . . . .   | 418 |
| 6.3. Ethynyl Radical, CCH . . . . .  | 418 |
| 6.4. Cyanogen Radical, CN . . . . .  | 420 |
| 6.5. CH . . . . .  | 421 |
| 6.6. Nitrogen Sulphide, NS . . . . .   | 423 |
| 6.7. Unidentified Lines, Tentative Interstellar Assignments and the<br>Need for Laboratory Spectra . . . . . | 423 |
| 7. Conclusions . . . . .   | 426 |
| Acknowledgements . . . . .   | 427 |
| References . . . . .   | 427 |
