Chapter I

VIBRATIONAL AND ROTATIONAL SPECTRA	1
---	----------

1.1 Introduction, 1; 1.2 Photon Energy, 2; 1.3 Degrees of Freedom of Molecular Motion, 3; 1.4 Normal Modes of Vibration, 4; 1.5 Mechanical Molecular Models, 4; 1.6 Coordinates Used to Describe Molecular Vibrations, 6; 1.7 Classical Vibrational Frequency Formula for Diatomic Molecule, 7; 1.8 Infrared Absorption and the Change in Dipole Moment, 10; 1.9 Anharmonicity and Overtones, 13; 1.10 Vibrational Potential Function, 14; 1.11 Introduction to the Quantum Effect, 17; 1.12 The Quantum Mechanical Harmonic Oscillator, 21; 1.13 The Boltzmann Distribution Function, 23; 1.14 Vibrational Transitions and Infrared Absorption, 24; 1.15 The Anharmonic Oscillator, 25; 1.16 Combination and Difference Bands, 28; 1.17 Fermi Resonance, 28; 1.18 Rotation of Linear Molecules, 30; 1.19 Rotational Transitions and Infrared Absorption, 33; 1.20 The Nonrigid Rotator, 38; 1.21 Rotational Line Intensities, 39; 1.22 Types of Rotators, 41; 1.23 Rotation of Symmetric Top Molecules, 41; 1.24 Vibrational–Rotational Spectrum, Classical Picture, 43; 1.25 Vibrational–Rotational Spectrum, Quantum Mechanical Treatment, 45; 1.26 Vibrational–Rotational Spectrum Nonrigid Rotator 51; 1.27 Spherical Top Molecules, 53; 1.28 Symmetrical Top Molecules, 53; 1.29 Asymmetrical Top Molecules, 55; 1.30 The Raman Effect, 57; 1.31 Polarizability, 59; 1.32 The Tensor Character of the Polarizability, 62; 1.33 Depolarization Ratio, 65; 1.34 Pure Rotational Raman Spectra, 67

Chapter 2

EXPERIMENTAL CONSIDERATIONS.....	69
---	-----------

2.1 Source of Infrared Radiation, 69; 2.2 Infrared Monochromators and Filters, 74; 2.3 Infrared Detectors, 81; 2.4 Commercial Instruments, 83; 2.5 Instrument Calibration, 84; 2.6 Sample Handling Techniques, 85; 2.7 Quantitative Analysis, 96; 2.8 Polarized Infrared Radiation, 105; 2.9 Infrared Fourier Transform Spectroscopy, 111; 2.10 Raman Sources, 113; 2.11 Raman Spectrographs, 114; 2.12 Raman Measurements, 115

Chapter 3**MOLECULAR SYMMETRY** 119

3.1 Symmetry Properties, 119; 3.2 Point Groups, 125; 3.3 Group Theory, 129; 3.4 Group Theory Applied to Point Groups, 131; 3.5 Representations of Groups, 134; 3.6 Irreducible Representations, 139; 3.7 The Character Table, 141; 3.8 Irreducible Representation Components in a Representation, 146; 3.9 Transformation Properties of a Vector, 147; 3.10 The Number of Fundamentals of Each Type, 149; 3.11 Selection Rules, 151; 3.12 Infrared Activity of Fundamentals, 153; 3.13 Raman Activity of Fundamentals, 155; 3.14 Overtone and Combination Bands, 156; 3.15 Symmetry Coordinates, 160; 3.16 Isotope Effects and the Product Rule, 161; 3.17 Character Tables and Selection Rules, 165

Chapter 4**THE VIBRATIONAL ORIGIN OF GROUP FREQUENCIES** .. 179

4.1 Introduction, 179; 4.2 Diatomic Oscillators, 180; 4.3 Coupled Oscillators, 180; 4.4 Unsymmetrical Coupled Oscillators, 183; 4.5 X-H Stretching Frequencies, 185; 4.6 Triple Bond Vibrations, 186; 4.7 Cumulated Double Bonds, 188; 4.8 The Linear $M_1-M_2-M_3$ Model, 189; 4.9 X-C \equiv N Compounds, 190; 4.10 Carbonyl and C=C Compounds, 192; 4.11 Cyclic Compound Stretching Vibrations, 196; 4.12 The Bent $M_1-M_2-M_1$, Stretching Frequencies, 200; 4.13 Noncyclic Single Bond Vibrations, 202; 4.14 Bend-Bend Interaction, 204; 4.15 Bend Stretch Interaction, 210; 4.16 Multiple Oscillator Groups, 213; 4.17 Interaction Force Constant Effects, 214; 4.18 Hydrogen Bonding, 216

Chapter 5**METHYL AND METHYLENE GROUPS** 220

5.1 Introduction to Group Frequencies, 220; 5.2 Methyl Groups, 220; 5.3 CH₃ Stretching Vibrations, 223; 5.4 CH₃ Deformation Vibrations, 225; 5.5 CH₃ Rock Vibrations, 227; 5.6 Methylene Groups, 229; 5.7 CH₂ Stretching Vibrations, 229; 5.8 CH₂ Deformation Vibrations, 230; 5.9 CH₂ Wag Vibrations, 230; 5.10 CH₂ Rock Vibrations, 231; 5.11 CH₂ Twisting Vibrations, 233; 5.12 CH₂ in Cyclic Compounds, 233; 5.13 Carbon-Hydrogen Group, 234

Chapter 6**TRIPLE BONDS AND CUMULATED DOUBLE BONDS 235**

6.1 Introduction, 235; 6.2 Monosubstituted Acetylenes, 236; 6.3 Disubstituted Acetylenes, 237; 6.4 Allenes, 237; 6.5 Nitriles, 237; 6.6 Nitrile *N*-Oxides and Complexes, 238; 6.7 Cyanates, 238; 6.8 Isocyanates, 239; 6.9 Thiocyanates, 239; 6.10 Isothiocyanates, 239; 6.11 Nitriles on a Nitrogen Atom, 240; 6.12 Carbodiimides, 240; 6.13 Ketene Imines, 240; 6.14 Diazo Compounds, 241; 6.15 Azides, 242; 6.16 Aryl Diazonium Salts, 243; 6.17 Isocyanides, 243; 6.18 Ketenes, 243; 6.19 Cyanide Ions, 244; 6.20 Cyanate Ions, 244; 6.21 Thiocyanate Ions, 244; 6.22 Metal Carbonyls, 244; 6.23 Three and Four Cumulated Double Bonds, 245

Chapter 7**OLEFIN GROUPS 246**

7.1 Noncyclic Olefins, 246; 7.2 Olefinic Hydrogen Wagging Vibrations, 249; 7.3 Cyclic C=C, 253

Chapter 8**AROMATIC AND HETEROAROMATIC RINGS 257**

8.1 Benzene Rings, 257; 8.2 The Carbon–Carbon Vibrations, 259; 8.3 The 1600 cm^{-1} Region, 260; 8.4 The 1500 cm^{-1} Region, 261; 8.5 The 700 cm^{-1} Region, 262; 8.6 The 900–700 cm^{-1} CH Wag Bands, 262; 8.7 The 2000–1650 cm^{-1} Summation Bands, 266; 8.8 The 1300–1000 cm^{-1} Region, 267; 8.9 The 850–600 cm^{-1} Region, 268; 8.10 The 550–400 cm^{-1} Region, 269; 8.11 Condensed Ring Aromatic Compounds, 270; 8.12 Pyridines, 271; 8.13 Pyridine *N*-Oxides, 272; 8.14 Pyrimidines, 272; 8.15 Triazines, 273; 8.16 Alkyl- or Aryl-Substituted Triazines, 273; 8.17 Melamines and Guanamines, 273; 8.18 Chloro-, Oxy-, and Thio-substituted Triazines, 274; 8.19 Tetrazines, 275; 8.20 Heteroaromatic Five-Membered Ring Compounds, 275; 8.21 Cyclopentadienyl Ring-Metal Complexes, 276

Chapter 9**CARBONYL COMPOUNDS 278**

9.1 Introduction, 278; 9.2 Mass Effects, 280; 9.3 Bond Angle Effects, 280; 9.4 Inductive Effects, 281; 9.5 Mesomeric Effects, 282; 9.6 Ketones, 283; 9.7 α -Chloro Ketones, 283; 9.8 Conjugated Ketones, 283; 9.9 Conjugated Hydrogen Bonded Ketones, 284; 9.10 Bond Angle Effects in

Ketones, 286; 9.11 Aldehyde CH Vibrations, 287; 9.12 Aldehyde Carbonyl Vibrations, 288; 9.13 Aldehyde C—C, 288; 9.14 Ester C=O, 288; 9.15 Ester C—O, 289; 9.16 Out-of-Plane Hydrogen Vibrations in Unsaturated Esters, 292; 9.17 Groups Next to the Carbonyl in Esters, 293; 9.18 Groups on the Oxygen Atoms in Esters, 294; 9.19 Lactones, 294; 9.20 Thiol Esters and Related Compounds, 295; 9.21 Organic Carbonate Derivatives and Related Compounds, 295; 9.22 Oxalates, 297; 9.23 Anhydrides, 297; 9.24; Peroxides, Acyl or Aroyl, 298; 9.25 Halogen-Substituted Carbonyls, 298; 9.26 Carboxylic Acid OH Stretch, 299; 9.27 Carboxyl—Carbonyl Stretch, 299; 9.28 Carboxyl OH Bending and C—O Stretching, 301; 9.29 Monomeric Acids, 301; 9.30 Aliphatic Peroxy Acids, 302; 9.31 Aromatic Acids, 302; 9.32 Aliphatic Bands in Long Chain *n*-Aliphatic Carboxylic Acids, Ester, and Soaps, 303; 9.33 Carboxyl Salts, 303; 9.34 Amino Acids, 304; 9.35 Amido Acids, 305; 9.36 Unsubstituted Amides, 305; 9.37 *N*-Substituted Amides (*trans*), 306; 9.38 *N*-Substituted Amides (*cis*) (Lactams), 306; 9.39 Disubstituted Amides, 307; 9.40 Ureas, 307; 9.41 Carbamates, 308; 9.42 Hydroxamic Acids, 308; 9.43 Imides, 308; 9.44 Isocyanurates, 309; 9.45 Acid Hydrazides, 309

Chapter 10

ETHERS, ALCOHOLS, AND PHENOLS 311

10.1 Aliphatic Ethers, 311; 10.2 Aromatic Ethers, 312; 10.3 Vinyl Ethers, 313; 10.4 Cyclic Ether Linkages, 315; 10.5 Oxirane Ring Compounds, 315; 10.6 OH Stretch in Alcohols and Phenols, 316; 10.7 C—O Stretch, 317; 10.8 OH Deformation, 318; 10.9 Phenols, 318; 10.10 Noncyclic Acetals and Related Compounds, 319; 10.11 Cyclic Acetals, 319; 10.12 Carbohydrates, 319; 10.13 Peroxides, 319

Chapter 11

AMINES, C=N, AND N=O COMPOUNDS 321

11.1 NH₂ Stretch in Amines, 321; 11.2 NH₂ Deformation in Amines, 321; 11.3 NH, 322; 11.4 C—N in Aliphatic Amines, 322; 11.5 C—N in Aromatic Amines, 323; 11.6 Aliphatic Bands in Amines, 323; 11.7 The Ammonium Ion, 324; 11.8 Amine Salts, 324; 11.9 C=N Groups, 325; 11.10 Nitro Group; 328; 11.11 Organic Nitrates, 330; 11.12 Nitramines, 330; 11.13 Organic Nitrates, 330; 11.14 Inorganic Nitrates and Nitrites, 330; 11.15 N=N Azo, 331; 11.16 Azoxy and Azothio Groups, 333; 11.17 C-Nitroso Compounds, 333; 11.18 Nitrosamines, 334

Chapter 12

**COMPOUNDS, CONTAINING BORON, SILICON,
PHOSPHORUS, SULFUR, OR HALOGEN 335**

12.1 Boron Compounds, 335; 12.2 B—O, 335; 12.3 B—OH, 336; 12.4 B—N, 336; 12.5 B—H, 337; 12.6 B—Cl, 337; 12.7 B—CH₃, 338; 12.8 B—Phenyl, 338; 12.9 Silicon Compounds, 338; 12.10 Si—H, 339; 12.11 Si—CH₃, 340; 12.12 Si—CH₂—R, 340; 12.13 Si—C₆H₅, 340; 12.14 Si—CH=CH₂, 340; 12.15 Si—O—R, 341; 12.16 Si—O—C₆H₅, 341; 12.17 Si—O—Si, 341; 12.18 Si—OH, 341; 12.19 Si—Halogen, 342; 12.20 Si—N, 342; 12.21 Phosphorus Compounds, 342; 12.22 P—H, 343; 12.23 PO, 344; 12.24 P—OH, 344; 12.25 P—O—P, 345; 12.26 PO₂⁻, POS⁻, PO₃²⁻, PO₄³⁻, 345; 12.27 P—O—C (Aliphatic), 346; 12.28 P—O—C (Phenyl), 346; 12.29 P—CH₂, 346; 12.30 P—CH₃, 347; 12.31 P—Phenyl, 347; 12.32 P=S, 347; 12.33 P—SH, 349; 12.34 P—N, 349; 12.35 P=N, 350; 12.36 P—F, P—Cl, P—C, 350; 12.37 S—H, 351; 12.38 Sulfides and Disulfides, 351; 12.39 CH₂—S, 351; 12.40 CH₃—S, 352; 12.41 S—CH=CH₂, 352; 12.42 S—Aryl, 352; 12.43 S—F, 352; 12.44 SO, 353; 12.45 SO₂, 353; 12.46 Sulfones, 354; 12.47 Sulfonamides 354; 12.48 Sulfonic Acids, 355; 12.49 Sulfonic Acid Salts, 355; 12.50 Sulfinic Acids, 355; 12.51 HSO₄⁻, 356; 12.52 SO₄²⁻, 356; 12.53 SO₃²⁻, 356; 12.54 S—O—CH₂, 356; 12.55 Thionylamine, 356; 12.56 C=S, 357; 12.57 (FHF)⁻, 359; 12.58 FCH, 359; 12.59 FC=C, 359; 12.60 FC=O, 359; 12.61 F—Aryl, 360; 12.62 CF Stretch, 360; 12.63 C—Cl, 361; 12.64 C—Br, 362; 12.65 C—I, 362; 12.66 Aryl Halides, 363; 12.67 Organometallic Compounds, 363

Chapter 13

**MAJOR SPECTRA-STRUCTURE
CORRELATIONS BY SPECTRAL REGIONS 365**

13.1 Introduction, 365; 13.2 3700–3100 cm⁻¹ (OH, NH, and ≡CH), 365; 13.3 3100–3000 cm⁻¹ (Aryl, Olefinic, and Three-Membered Ring CH), 366; 13.4 3000–2700 cm⁻¹ (Aliphatic CH), 366; 13.5 3100–2400 cm⁻¹ (Acidic and Strongly Bonded Hydrogens), 366; 13.6 2600–2100 cm⁻¹ (SH, BH, PH, and SiH), 366; 13.7 2300–1900 cm⁻¹ (X=Y and X=Y=Z), 366; 13.8 2000–1700 cm⁻¹ (Aryl and Olefinic Overtones), 367; 13.9 1900–1550 cm⁻¹ (C=O), 367; 13.10 1700–1550 cm⁻¹ (C=C and C=N), 367; 13.11 1600–1450 cm⁻¹ (N=O), 368; 13.12 1660–1500 cm⁻¹ (NH₂, NH₃⁺, and CNH), 368; 13.13 1620–1420 cm⁻¹ (Aromatic and Heteroaromatic Rings), 368; 13.14 1500–1250 cm⁻¹ (CH₃ and CH₂), 368; 13.15 1470–1310 cm⁻¹ (B—O, B—N, NO₃⁻, CO₃²⁻, and NH₄⁻), 369; 13.16 1400–1000 cm⁻¹ (SO₂, SO₃⁻, SO, and SO₄²⁻), 369; 13.17 1300–1140 cm⁻¹ (P=O), 369; 13.18 1350–1120 cm⁻¹ (CF₃ and CF₂), 369; 13.19 1350–1150 cm⁻¹ (CH₂ and CH Wag), 369; 13.20 1300–1000 cm⁻¹ (C—O), 370; 13.21 1100–830 cm⁻¹ (Si—O and P—O), 370; 13.22 1000–600 cm⁻¹ (Olefinic CH Wag), 370; 13.23 900–700 cm⁻¹ (Aromatic CH Wag), 370; 13.24

830–500 cm^{-1} (CCl, CBr, and Cl), 370; 13.25 Near Infrared Region Correlation Chart 371; 13.26 Carbon–Hydrogen Stretching Region Correlation Chart, 374; 13.27 Sodium Chloride Region Correlation Charts, 375; 13.28 Low Frequency Infrared Region, 382; 13.29 Selected Infrared Spectra Illustrating Functional Group Frequencies, 382; 13.30 Selected Raman Spectra, 453

Chapter 14

THE THEORETICAL ANALYSIS OF MOLECULAR VIBRATIONS 459

14.1 Normal Modes of Vibration, 459; 14.2 The Linear Triatomic Model's Stretching Frequencies, 462; 14.3 Internal Coordinates, 466; 14.4 Vibrational Solution Using Internal Coordinates, 467; 14.5 The **G** Matrix, 469; 14.6 The **L** Matrix, 473; 14.7 Normal Coordinates, 474; 14.8 Potential Energy Distribution, 476; 14.9 The Form of the Normal Coordinates, 477; 14.10 Symmetry Coordinates, 478; 14.11 The CHCl_3 Molecule, 481; 14.12 The Internal Coordinates for CHCl_3 , 484; 14.13 The Symmetry Coordinates for CHCl_3 , 485; 14.14 The **G** Matrix for CHCl_3 , 494; 14.15 The **F** Matrix for CHCl_3 , 502; 14.16 The Secular Determinants for CHCl_3 , 504; 14.17 The Frequencies of the CDCl_3 Molecules, 505; 14.18 Comparison of Experimental and Calculated Wavenumbers, 506; 14.19 The Form of the Chloroform Normal Coordinates, 506; 14.20 The Potential Function Problem, 511; 14.21 A Review of Matrix Notation, 512; 14.22 The Normal Coordinate Problem in Matrix Form, 514
