

# *Contents*

## *Introduction*

*R. G. Cooks*

1. The Subject . . . . .	1
2. Metastable Ions . . . . .	3
3. Types of Collisions . . . . .	3
4. Collision Cross Sections . . . . .	5
5. Energy Interconversions . . . . .	6
6. Energy Resolution and Angular Resolution . . . . .	7
7. Laboratory and Center-of-Mass Coordinate Systems . . . . .	8
8. Guideposts to the Contents . . . . .	14
References . . . . .	16

## *1 Collisional Excitation of Simple Systems*

*John T. Park*

1. Introduction . . . . .	19
1.1 Types of Collisions . . . . .	20
1.2. Elements of Collision Theory . . . . .	21
1.3. Experimental Methods . . . . .	24
2. Determination of Excitation Cross Sections from Ion Energy-Loss Spectrometry . . . . .	26
2.1. Apparatus . . . . .	26
2.2. Analysis of the Energy-Loss Spectrometric Method . . . . .	30
3. Determination of Excitation Cross Sections from Photon Emission Data . . . . .	35
3.1. Incident Particle Flux Determination . . . . .	38

3.2. Target Density Determination . . . . .	40
3.3. Photon Flux Determination . . . . .	42
4. The Excitation of Atomic Hydrogen . . . . .	44
4.1. Modulated Crossed-Beam Technique . . . . .	44
4.2. Energy-Loss Spectra of Atomic Hydrogen . . . . .	49
5. Excitation of Helium . . . . .	53
5.1. Energy-Loss Spectra of Helium . . . . .	53
5.2. Optical Studies of the Excitation of Helium . . . . .	54
6. Differential Cross-Section Measurements . . . . .	63
7. Excitation of Simple Molecules . . . . .	71
7.1. Excitation of Molecular Hydrogen . . . . .	73
7.2. Excitation of Molecular Nitrogen . . . . .	75
7.3. Excitation of Molecular Oxygen . . . . .	79
7.4. Excitation of Singlet-Triplet Transitions . . . . .	81
8. Discussion . . . . .	84
References . . . . .	87

## 2 Charge Transfer in Atomic Systems

*R. E. Johnson and J. W. Boring*

1. Introduction . . . . .	91
2. Theory . . . . .	96
2.1. Introduction . . . . .	96
2.2. Semiclassical Cross Sections Differential in Angle and Energy . . . . .	99
2.3. Transition Probabilities and Energy-Loss Spectra . . . . .	101
2.4. General Considerations . . . . .	107
3. Experimental Methods . . . . .	109
3.1. Introduction . . . . .	109
3.2. Pressure Measurement . . . . .	110
3.3. Detectors . . . . .	111
3.4. Beam Production . . . . .	113
3.5. Cross-Section Measurements . . . . .	114
4. Experimental Data and Interpretation . . . . .	119
4.1. Introduction . . . . .	119
4.2. Integrated Cross Sections . . . . .	119
4.3. Energy-Loss Spectra with Doubly Charged Ions . . . . .	124
4.4. Angular Differential Cross Sections . . . . .	131
4.5. Cross Sections Differential in Angle and Energy . . . . .	138
5. Summary . . . . .	142
References . . . . .	143

### **3 Inelastic Energy Loss: Newer Experimental Techniques and Molecular Orbital Theory**

*Q. C. Kessel, E. Pollack, and W. W. Smith*

1. Introduction . . . . .	147
2. The Molecular Orbital Model . . . . .	149
2.1. Molecular Orbitals for Collision Processes . . . . .	149
2.2. Transitions between Molecular Orbitals . . . . .	156
3. Experimental Techniques and Results . . . . .	163
3.1. Energy-Loss Measurements . . . . .	166
3.1.1. A Typical Scattered-Particle Apparatus . . . . .	166
3.1.2. Time-of-Flight Measurements . . . . .	177
3.1.3. The Use of Molecular Targets . . . . .	189
3.1.4. Inner-Shell Excitations . . . . .	193
3.2. Ion-Photon and Ion-Electron Coincidence Measurements . . . . .	198
3.2.1. Introduction . . . . .	198
3.2.2. Experimental Principles . . . . .	200
3.2.3. Charge-Exchange Measurements Using Coincidence Techniques . . . . .	203
3.2.4. Stueckelberg Oscillations . . . . .	206
3.2.5. Rosenthal Oscillations and Long-Range Couplings . . . . .	211
3.2.6. Polarization and Angular Distribution Measurements in Coincidence . . . . .	214
3.2.7. Ion-Molecule Coincidence Measurements . . . . .	217
4. Summary and Conclusion . . . . .	219
References . . . . .	221

### **4 Double Electron Transfer and Related Reactions**

*J. Appell*

1. Introduction . . . . .	227
2. Cross Sections . . . . .	229
3. Experimental Techniques of Double-Charge-Transfer Spectroscopy . . . . .	231
3.1. The Instrument . . . . .	231
3.2. The Energy-Loss Scale . . . . .	232
3.3. An Apparatus with Higher Energy Resolution . . . . .	233
3.4. Target Pressure Dependences of the Negative Ion Intensities . . . . .	234
4. ( $H^+$ , M) Spectra and the Study of the States of the Target Species . . . . .	235

4.1. The Spin Conservation Rule . . . . .	236
4.2. The Applicability of the Franck–Condon Principle . . . . .	238
4.3. Selection Rules for the Symmetry of the Molecular States . . . . .	240
4.4. Observation of Double-Charge-Transfer Processes at Different Scattering Angles . . . . .	242
4.5. Determination of the Double-Ionization Potentials of Some Molecules . . . . .	243
4.6. Observation of Radiative Transitions without Detection of the Photon . . . . .	247
5. ( $A^+$ , Ar) Spectra: An Insight into Future Possible Developments . . . . .	248
5.1. Determination of the State Composition of the $A^+$ Beam . . . . .	249
5.2. Determination of the Geometric Structure of a Polyatomic $A^+$ or $A^-$ Ion . . . . .	250
5.3. The Electron Affinity of the Projectile Species A . . . . .	250
5.4. Dissociative Double-Charge-Transfer Spectra . . . . .	251
Appendix: Energy Loss of the Projectile in an Inelastic Collision . . . . .	252
References . . . . .	255

## 5 *Ionic Collisions as the Basis for New Types of Mass Spectra*

*D. L. Kemp and R. G. Cooks*

1. Introduction . . . . .	257
2. $2E$ Mass Spectra . . . . .	260
3. $-E$ Mass Spectra . . . . .	267
4. $E/2$ Mass Spectra . . . . .	272
5. $+E$ Mass Spectra . . . . .	281
6. Other Types of Spectra . . . . .	284
References . . . . .	288

## 6 *Collision-Induced Dissociation of Diatomic Ions*

*J. Los and T. R. Govers*

1. Introduction . . . . .	289
2. Dynamics of Dissociation . . . . .	291
2.1. The Two-Step Model . . . . .	294
2.2. Electronic Excitation . . . . .	296
2.3. Vibrational/Rotational Dissociation . . . . .	300
2.4. Predissociation . . . . .	302
3. Experimental Techniques . . . . .	305
3.1. The Aston Band Method . . . . .	306
3.2. Initial-State Preparation . . . . .	314

3.3. Final-State Analysis . . . . .	316
3.4. The Apparatus Function . . . . .	317
4. Direct Dissociation in Heavy-Particle Collisions . . . . .	321
4.1. The Dissociation of H <sub>2</sub> <sup>+</sup> . . . . .	322
4.2. The Dissociation of HeH <sup>+</sup> . . . . .	331
4.3. Discussion . . . . .	335
5. Translational Spectroscopy . . . . .	335
5.1. Collisional Dissociation of 4–10 keV N <sub>2</sub> <sup>+</sup> Ions . . . . .	336
5.2. Collisional and Unimolecular Dissociation of 10-keV HeH <sup>+</sup> Ions . . . . .	340
5.3. Photodissociation of H <sub>2</sub> <sup>+</sup> . . . . .	347
6. Concluding Remarks . . . . .	351
References . . . . .	353

## 7 *Collision-Induced Dissociation of Polyatomic Ions*

*R. G. Cooks*

1. Introduction . . . . .	357
1.1. Scope of Chapter . . . . .	357
1.2. Comparison with Metastable Ions . . . . .	358
1.3. Development of CID Studies . . . . .	359
2. The Reaction . . . . .	363
2.1. The Basic Phenomenon and Its Experimental Characterization . . . . .	363
2.2. Mechanism . . . . .	367
2.3. Cross Section . . . . .	380
2.4. Effects of Experimental Variables . . . . .	385
3. Experimental Procedures . . . . .	395
3.1. Instrumentation and Scanning Methods . . . . .	395
3.2. Energy Resolution and Kinetic Energy Measurement . . . . .	399
3.3. Other Considerations . . . . .	401
4. Applications . . . . .	402
4.1. Ion Structure Determination . . . . .	402
4.2. Thermochemical Determinations . . . . .	413
4.3. Fragmentation Mechanisms . . . . .	417
4.4. Molecular Structure Determination . . . . .	422
4.5. Analysis of Mixtures and Isotope Incorporation . . . . .	425
4.6. Product Characterization in Ion–Molecule Reactions and Other Applications . . . . .	427
5. Related Reactions . . . . .	430
5.1. Negative Ions . . . . .	431
5.2. Dissociative Charge Transfer . . . . .	434
5.3. Related Ion–Surface Reactions . . . . .	441

5.4. Related Photodissociations . . . . .	442
5.5. CID Studied by Ion–Cyclotron Resonance Spectrometry	443
5.6. CID of Neutral Molecules . . . . .	444
6. Prospects . . . . .	445
References . . . . .	446
