1	The origins, realization and performance of ICP–MS systems	1
	ALAN L. GRAY	
1.1	Introduction	1
1.2	Origins	2
1.3	The ICP–MS systems	6
1.3.1	The ICP ion source and extraction system	6
1.3.2	The ion lens and mass analyser	11
1.3.3	Ion detection	14
1.3.4	Data handling	15
1.3.5	Overall system	16
1.4	Operating characteristics	17
1.4.1	Plasma ion populations and system response	17
1.4.2	Spectra	22
1.4.3	Detection limits	24
1.4.4	Interferences—oxide and doubly charged ions	26
1.4.5	Interferences—polyatomic ions	29
1.4.6	Interferences— isobaric overlap	32
1.4.7	Interferences—matrix suppression	32
1.4.8	Interferences—physical effects	34
1.5	Alternative methods of sample introduction	36
1.6	Future trends	38
	References	39
2	Application of ICP–MS in the earth sciences	43
	ALAN R. DATE and KYM E. JARVIS	
2.1	Introduction	43
2.2	The advantages of ICP–MS in geochemical analysis	43
2.3	Practical limitations on the use of ICP–MS in geochemical analysis	47
2.4	Sample introduction for ICP–MS	49
2.5	Trace element analysis	50
2.5.1	The determination of the rare-earth elements in silicate rocks and minerals	53
2.5.2	General spectral characteristics for REEs by ICP–MS	54
2.5.3	REE spectra in geological materials	54
2.5.4	Polyatomic ion interferences	54
2.5.5	Precision and accuracy	58
2.5.6	REE mineral analysis	58
2.5.7	The determination of platinum group elements by fire assay ICP–MS	59
2.5.8	General spectral characteristics for PGEs by ICP–MS	61
2.5.9	Simple spectra	61
2.5.10	Precision and accuracy	62
2.5.11	Trace elements in calcium-rich samples	62
2.5.12	Trace elements in manganese modules	64
2.6	Isotope ratio determination	65
2.6.1	Lead isotope ratios	65
2.6.2	Lead mineral concentrates	67
2.6.3	Determinations of lead isotope ratios in rock solutions	68
	References	68

3	Water resources	71
	HOWARD E. TAYLOR	
3.1	Introduction	71
3.2	Experimental	72
	3.2.1 Sampling	72
	3.2.2 Sample preparation	73
	3.2.3 Types of analysis	75
3.3	Results and discussion	82
	3.3.1 Interferences	82
	3.3.2 Accuracy and precision	83
	3.3.3 Detection limits	87
3.4	Conclusions	87
	References	88
4	Isotope ratio measurements using ICP-MS	90
	G. PRICE RUSS III	
4.1	Introduction	90
4.2	General concepts	90
	4.2.1 Nuclear facts	90
	4.2.2 Isotopic variations	91
	4.2.3 Applications	93
	4.2.4 Other techniques	97
	4.2.5 ICP-MS	98
4.3	Optimizing performance	98
	4.3.1 Resolution and sensitivity	99
	4.3.2 Peak area	101
	4.3.3 Sensitivity	102
	4.3.4 Multipliers	105
	4.3.5 Background and interference	106
	4.3.6 Mass bias	107
	4.3.7 Precision	108
	4.3.8 Linearity	110
	4.3.9 Acquisition parameters	110
4.4	Selected applications	110
	4.4.1 Nuclear	110
	4.4.2 Lead studies	111
	4.4.3 ¹⁸⁷ Osmium geochronology	111
	4.4.4 Isotope dilution	112
	4.4.5 Medicine	112
4.5	<i>Quo vadimus?</i>	112
	References	113
5	Stable isotope tracer applications of ICP-MS	115
	M. JANGHORBANI and BILL T.G. TING	
5.1	Introduction	115
5.2	General features of biological materials	116
5.3	Fundamental issues of ICP-MS	117
	5.3.1 Background considerations	117
	5.3.2 Stability of ion beam intensities	120
	5.3.3 Precision of isotope ratio measurements	121
	5.3.4 Linear dynamic range of isotope ratios	122
	5.3.5 Concentration dependence of isotope ratios	124
	5.3.6 Various interferences	125
5.4	Practical issues in the use of ICP-MS	127
	5.4.1 Chemical manipulations	128

5.4.2	Solution concentration and sample volume	129
5.4.3	Sample throughput	129
5.4.4	Isotope calibration procedures	129
5.4.5	Overall memory effect	130
5.4.6	Overall accuracy of analyses	131
5.5	Examples of applications	132
5.5.1	Methods-related advances	133
5.5.2	Examples of applications	136
5.6	Future trends and research needs	138
5.7	Conclusions	139
	References	139
6	Applications in food science	141
	JOHN R. DEAN, HELEN M. CREWS and LES EBDON	
6.1	Introduction	141
6.1.1	The need for trace analysis in food science	141
6.1.2	Conventional analytical techniques in food science	142
6.1.3	Advantages of ICP-MS in food science	143
6.2	Applications	143
6.2.1	Total analyte determinations in food	146
6.2.2	Trace element speciation studies	150
6.2.3	Nutrient uptake studies	158
6.3	Potential for ICP-MS in food science	160
6.3.1	Minimal sample preparation	160
6.3.2	Nutritional, bioavailability and speciation studies	162
6.3.3	Multielement analysis in directly coupled LC-ICP-MS	163
6.4	Conclusions	163
