

# INDICE

U. M. GRASSANO and N. TERZI – Introduction . . . . . pag. xv

Gruppo fotografico dei partecipanti al Corso . . . . . fuori testo

F. BASSANI and L. C. ANDREANI – Exciton-polariton states in insulators and semiconductors.

1. Introduction and classical theory . . . . .	pag. 1
2. Phenomenological quantum theory of polaritons with spatial dispersion . . . . .	» 6
2'1. Phenomenological equations of motion and second quantization . . . . .	» 6
2'2. Diagonalization of the polarization-radiation Hamiltonian . . . . .	» 8
2'3. Exact determination of polariton vacuum and eigenfunctions . . . . .	» 9
3. Microscopic theory of excitons and exciton-photon interaction . . . . .	» 12
3'1. Tightly bound excitons . . . . .	» 13
3'2. Shallow excitons . . . . .	» 18
3'3. Comment on the validity of the models . . . . .	» 19
4. Spatial dispersion, additional ray and the problem of additional boundary conditions . . . . .	» 20
4'1. General considerations . . . . .	» 20
4'2. The ABC approximation . . . . .	» 21
4'3. Stahl's coherent-wave approach . . . . .	» 23
5. Experimental developments . . . . .	» 25
5'1. General remarks . . . . .	» 25
5'2. Nonlinear optical processes . . . . .	» 27
5'3. Direct observation of the additional ray . . . . .	» 29
5'4. Other experiments . . . . .	» 32
6. Conclusions and prospects . . . . .	» 34

G. ZIMMERER – Creation, motion and decay of excitons in rare-gas solids.

Introduction . . . . .	pag.	37
PART I – Basic properties of rare-gas solids . . . . .	»	38
1. The crystal structure and lattice properties . . . . .	»	38
2. Some remarks on the band structure of rare-gas solids . . . . .	»	41
PART II – Free excitons . . . . .	»	42
1. Creation of free excitons . . . . .	»	42
2. Some remarks on excitons. . . . .	»	44
2'1. Wannier-Mott excitons . . . . .	»	45
2'2. Frenkel excitons . . . . .	»	47
2'3. Longitudinal-transverse splitting . . . . .	»	47
3. The special situation in rare-gas solids . . . . .	»	48
4. Determination of band gap energies . . . . .	»	50
5. Exciton-phonon interaction and its manifestation in the absorption process . . . . .	»	53
6. Application of the exciton-polariton model . . . . .	»	55
7. Further remarks on exciton-phonon interaction and absorption . . . . .	»	57
8. Surface excitons of rare-gas solids . . . . .	»	59
PART III – Radiative decay and trapping of excitons . . . . .	»	60
1. Introductory remarks . . . . .	»	60
2. Coexistence of FE and STE emission: experimental results . . . . .	»	61
3. Coexistence of FE and STE states: some aspects of the theory . . . . .	»	64
4. The trapping process . . . . .	»	66
5. Trapping and self-trapping . . . . .	»	71
PART IV – Energy transfer of excitons in rare-gas solids . . . . .	»	72
1. Introductory remarks . . . . .	»	72
2. Photoluminescence yields and energy transfer . . . . .	»	73
3. Photoelectron emission and energy transfer . . . . .	»	78
PART V – Decay of self-trapped excitons . . . . .	»	82
1. Luminescence spectra—a survey . . . . .	»	82
2. Two types of self-trapped excitons . . . . .	»	84
3. Relaxation energies and trends . . . . .	»	85
4. More details on the m-STE . . . . .	»	87
4'1. Separation of $^1\Sigma_u^+$ and $^3\Sigma_u^+$ emission . . . . .	»	88
4'2. Lifetimes of the $^1\Sigma_u^+$ and the $^3\Sigma_u^+$ states . . . . .	»	90
4'3. Higher excited states of the m-STE . . . . .	»	92
4'4. A peculiarity of the m-STE emission of solid Xe . . . . .	»	93

5. More details on the a-STE . . . . .	pag.	95
6. Surface effects . . . . .	»	99
7. Vibrational relaxation of m-STE's . . . . .	»	102
W. GEBHARDT - Elementary excitations in diluted magnetic semiconductors.		
1. Introduction . . . . .	»	111
2. Location of $3d^5$ -states . . . . .	»	113
3. Wannier excitons . . . . .	»	117
3'1. Free excitons . . . . .	»	117
3'2. Localized excitons . . . . .	»	119
4. Frenkel excitons . . . . .	»	121
5. Summary . . . . .	»	126
C. GOURDON and P. LAVALLARD - Frequency-dependent phase of reflected light and transient reflectivity near an excitonic resonance in CdSe.		
1. Introduction . . . . .	»	129
2. Phase measurement . . . . .	»	131
3. Theoretical model . . . . .	»	133
4. Time delay of the reflected wave . . . . .	»	137
5. Conclusion . . . . .	»	139
T. O. WOODRUFF - Polarization effects on localized exciton states in solids . . . . .		
	»	141
P. PERFETTI - Resonant photoemission in semiconductors.		
1. Introduction . . . . .	»	146
2. Resonant photoemission in GaP and GaAs . . . . .	»	150
3. Discussion of the test procedure . . . . .	»	156
4. Applications to crystalline and amorphous silicon . . . . .	»	160
J. C. M. HENNING - Selective pair luminescence in semiconductors.		
1. Effective-mass theory in a nutshell. . . . .	»	167
1'1. Simple bands . . . . .	»	169
1'2. Equivalent extrema . . . . .	»	170
1'3. Inequivalent extrema. . . . .	»	171
1'4. Degenerate extrema . . . . .	»	171

2. Survey of experimental methods . . . . .	pag. 172
3. Selective pair luminescence . . . . .	» 175
4. Review of reported results . . . . .	» 180

#### H. THOMAS – Phonons and electron-phonon interaction at localized centres.

1. Introduction . . . . .	» 186
2. Lattice dynamics . . . . .	» 187
2'1. Lattice-dynamical description . . . . .	» 187
2'1.1. Local normal co-ordinates . . . . .	» 187
2'1.2. Local strain co-ordinates . . . . .	» 188
2'2. Lattice vibrations of pure crystals. . . . .	» 188
2'2.1. Optical phonon modes . . . . .	» 188
2'2.2. Structural phase transitions and soft phonon modes . . . . .	» 189
2'2.3. Acoustic phonon modes . . . . .	» 191
2'2.4. Piezodistortive coupling . . . . .	» 192
2'3. Lattice dynamics of a defect . . . . .	» 193
2'3.1. Scattering modes, local modes, resonances . . . . .	» 193
2'3.2. Condensation of a local mode. . . . .	» 197
3. Jahn-Teller effect. . . . .	» 198
3'1. Electronic crystal field states . . . . .	» 198
3'2. Vibronic motion at a Jahn-Teller centre . . . . .	» 201
3'2.1. Jahn-Teller Hamiltonian . . . . .	» 201
3'2.2. Types of Jahn-Teller coupling . . . . .	» 202
3'2.3. Specific cases . . . . .	» 204
3'2.3a. $E \otimes \beta$ coupling . . . . .	» 204
3'2.3b. $(A \oplus B) \otimes \beta$ coupling (pseudo-JT effect) . . . . .	» 205
3'2.3c. $E \otimes \varepsilon$ coupling . . . . .	» 205
3'3. Co-operative Jahn-Teller effect . . . . .	» 207
4. The Jahn-Teller polaron. . . . .	» 209

#### K. F. RENK – Phonon pulses: spectroscopic generation and dynamics.

1. Introduction . . . . .	» 214
2. Spontaneous decay of acoustic phonons. . . . .	» 215
3. Generation of very-high-frequency phonons by band mode absorption . . . . .	» 222
4. Excitation of phonons by phonon combination absorption . . . . .	» 228
5. Mass defect scattering . . . . .	» 232
6. Long-lived zone boundary phonons. . . . .	» 238
7. Spectral spatial diffusion of phonons . . . . .	» 240
8. Conclusion . . . . .	» 248

M. MONTAGNA and G. VILIANI – Nonradiative transfer of optical excitation in ruby.

1. Introduction . . . . .	pag. 251
2. Ruby: structure and spectroscopic properties . . . . .	» 252
3. Early experiments indicating the presence of energy transfer . . . . .	» 255
3'1. Single-ion to pair transfer . . . . .	» 255
3'2. Single-ion to single-ion transfer . . . . .	» 257
4. Effects of external fields . . . . .	» 259
4'1. Electric field . . . . .	» 259
4'2. Uniaxial stress . . . . .	» 263
4'3. Magnetic field . . . . .	» 267
5. Conclusions . . . . .	» 270

D. L. HUBER – Transfer and trapping of optical excitation.

PART I – Transfer . . . . .	» 272
1. Introduction . . . . .	» 272
1'1. Transition rates . . . . .	» 272
1'2. Rate equations . . . . .	» 274
2. Experimental probes of excitation transfer . . . . .	» 274
2'1. Fluorescence line narrowing . . . . .	» 274
2'2. Four-wave mixing . . . . .	» 275
3. Theoretical description of fluorescence line narrowing . . . . .	» 275
3'1. General comments . . . . .	» 275
3'2. Exact and approximate results for $R(t)$ . . . . .	» 276
3'3. Percolating systems . . . . .	» 277
4. Diffusion of optical excitation . . . . .	» 278
4'1. General comments . . . . .	» 278
4'2. Diffusion in disordered arrays . . . . .	» 279
4'3. Diffusion at finite temperatures . . . . .	» 280
PART II – Trapping in systems with incoherent transfer . . . . .	» 281
1. Introduction . . . . .	» 281
2. Exact results . . . . .	» 282
2'1. Trapping in the absence of transfer between centers . . . . .	» 282
2'2. Trapping in the rapid-transfer limit . . . . .	» 282
3. Approximate theories in three dimensions . . . . .	» 283
3'1. Early theories . . . . .	» 283
3'2. Average $T$ -matrix approximation . . . . .	» 283
3'3. Coherent potential approximation . . . . .	» 284
4. Exact results in one dimension . . . . .	» 285

5. Experimental studies . . . . .	pag. 286
5'1. Evolution of the fluorescence from the centers . . . . .	» 286
5'1.1. $\text{Pr}_{0.95}\text{Nd}_{0.05}\text{F}_3$ . . . . .	» 286
5'1.2. $\text{Pr}_{0.2}\text{La}_{0.8}\text{F}_3$ . . . . .	» 286
6. Trap fluorescence . . . . .	» 286
 PART III – Transfer and trapping for extended states . . . . .	» 287
1. Introduction . . . . .	» 287
2. Trapping from excited states in periodic arrays . . . . .	» 288
3. Trapping in disordered systems . . . . .	» 289
 F. LUTY – Excitation, vibrational fluorescence and energy transfer of $\text{CN}^-$ defect modes in alkali halides.	
1. Introduction . . . . .	» 292
2. Optical excitation of the fundamental $4.8 \mu\text{m}$ $\text{CN}^-$ absorption . . . . .	» 294
3. Optical excitation of the second harmonic ( $2.4 \mu\text{m}$ ) $\text{CN}^-$ absorption by tunable color center laser . . . . .	» 299
4. $\text{CN}^-$ excitation by coupling to optically pumped $F'$ centers in KCl . . . . .	» 307
5. Total transformation of electronic $F'$ center emission into multiple-state $\text{CN}^-$ vibrational emission ( $4.8 \mu\text{m}$ ) in CsCl. . . . .	» 310
6. $\text{CN}^-$ vibrational excitation by interaction with electric field produced hot conduction electrons? . . . . .	» 315
 G. BENEDEK – Surface excitations from particle-surface scattering.	
1. Introduction . . . . .	» 318
2. Theory of particle-surface inelastic scattering . . . . .	» 320
3. The role of electron-phonon interaction in atom-surface scattering . . . . .	» 325
4. Scattering of electrons from surface polaritons . . . . .	» 330
 A. M. MALVEZZI – High-intensity picosecond laser interaction with semiconductors.	
1. Introduction . . . . .	» 335
2. Basic description . . . . .	» 337
3. Experimental techniques . . . . .	» 339
3'1. Introduction . . . . .	» 339
3'2. Optical measurements . . . . .	» 340

4. Experimental results on silicon . . . . .	pag. 342
4'1. Optical measurements . . . . .	» 342
4'2. Charged-particle emission . . . . .	» 345
5. Experimental results with GaAs . . . . .	» 349
6. Conclusions . . . . .	» 352

W. H. KNOX – Picosecond vibrational dynamics of  $O_2^-$  in alkali halide hosts.

1. Introduction . . . . .	» 355
2. Experimental techniques . . . . .	» 356
3. Fluorescence dynamics . . . . .	» 356
3'1. Host dependence of VR rate . . . . .	» 356
3'2. Temperature dependence . . . . .	» 359
4. Excited-state model. . . . .	» 360
5. Conclusion . . . . .	» 362

S. VÖLKER – High-resolution spectroscopy of organic solids: hole-burning in molecular crystals and amorphous systems at low temperature.

1. Spectral hole-burning . . . . .	» 363
1'1. Principle and technique . . . . .	» 363
1'1.1. Homogeneous and inhomogeneous linewidths . . . . .	» 363
1'1.2. Hole-burning mechanisms. . . . .	» 366
1'1.3. Experimental procedure . . . . .	» 367
1'2. Photochemistry and hole-burning of porphin and related compounds . . . . .	» 369
1'2.1. Free-base porphin ( $H_2P$ ) . . . . .	» 369
1'2.2. Free-base chlorin ( $H_2Ch$ ) . . . . .	» 372
1'2.3. Bacteriochlorin ( $H_2B$ ) . . . . .	» 374
1'2.4. Octylpyropheophorbide $\alpha$ (OPPB) and pheophytin $\alpha$ . . . . .	» 376
1'3. Photoreactions and hole-burning in ionic dye systems . . . . .	» 378
1'3.1. Electron-phonon coupling. . . . .	» 379
1'3.2. Photochemistry . . . . .	» 379
2. Applications of spectral hole-burning to organic crystalline systems . . . . .	» 381
2'1. Storage of information . . . . .	» 381
2'2. Vibronic relaxation. . . . .	» 382
2'3. Zeeman and Stark spectroscopy in the MHz regime . . . . .	» 385
2'3.1. Zeeman effect in free-base porphin . . . . .	» 385
2'3.2. Zeeman effect in free-base chlorin. . . . .	» 388
2'3.3. Stark effect in free-base chlorin. . . . .	» 388

2'4.	Optical dephasing in molecular mixed crystals . . . .	pag. 389
2'4.1.	Free-base porphin and chlorin in <i>n</i> -alkane hosts	» 389
2'4.2.	Magnesium porphin: an example for transient hole-burning . . . . .	» 392
2'4.3.	Model for optical dephasing in organic crystals	» 394
3.	Relaxation processes in amorphous systems . . . . .	» 396
3'1.	Historical background . . . . .	» 396
3'2.	Optical dephasing in glasses studied by hole-burning .	» 399
3'2.1.	Photochemical hole-burning (PHB) systems . .	» 399
3'2.2.	Nonphotochemical hole-burning (NPHB) systems	» 403
3'2.3.	Pitfalls in the determination of homogeneous linewidths . . . . .	» 406
3'3.	Survey of models for optical dephasing in glasses . . .	» 407
3'3.1.	Jackson and Silbey's model . . . . .	» 407
3'3.2.	Lyo and Orbach's «fracton» model . . . . .	» 408
3'3.3.	Hunklinger and Schmidt's model . . . . .	» 409
3'3.4.	Further models . . . . .	» 409
3'4.	Optical dephasing in semi-crystalline polymers . . . .	» 411
4.	Conclusions on optical dephasing in crystals and glasses . .	» 411

J. KLAFTER, J. M. DRAKE and A. BLUMEN – Energy transfer in restricted geometries.

1.	Introduction . . . . .	» 418
2.	The direct energy transfer . . . . .	» 419
3.	Indirect (multistep) energy transfer . . . . .	» 426
4.	Self-diffusion of a molecule in porous glass . . . . .	» 431

J. JORTNER, D. SCHARF and U. LANDMAN – Energetics and dynamics of clusters.

1.	Prologue . . . . .	» 438
2.	Classification of clusters . . . . .	» 442
2'1.	Microclusters ( $n = 2 \div 10$ or 13) . . . . .	» 443
2'2.	Small clusters ( $n \sim 10 \div 10^3$ ) . . . . .	» 444
2'3.	Large clusters ( $n > 10^3$ ) . . . . .	» 444
3.	Large clusters . . . . .	» 444
4.	Heteroclusters . . . . .	» 447
5.	Ionization of clusters . . . . .	» 449
5'1.	Small-polaron effects . . . . .	» 449
5'2.	Hole trapping . . . . .	» 450
5'3.	Destabilization of ionized ionic clusters . . . . .	» 452
5'4.	Polarization interactions in ionic Van der Waals (VdW) systems . . . . .	» 452

6. Electron localization in clusters . . . . .	pag. 453
6'1. Electron attachment to rare-gas clusters . . . . .	» 454
6'2. A stable molecular negative ion . . . . .	» 455
6'3. Stabilization of a negative ion by solvation ( <i>e.g.</i> , $(\text{CO}_2)_n^-$ ( $n = 2 \div 6$ )) . . . . .	» 455
6'4. A solvated electron in a cluster of polar molecules ( <i>e.g.</i> , $(\text{H}_2\text{O})_n^-$ , $(\text{NH}_3)_n^-$ ) . . . . .	» 455
6'5. Electron localization in alkali halide clusters . . . . .	» 459
7. Dynamic processes in clusters . . . . .	» 468
7'1. Vibrational predissociation (VP) . . . . .	» 469
7'2. Vibrational predissociation induced by exciton trapping . . . . .	» 469
7'3. Fission of microclusters . . . . .	» 476

## R. S. KNOX – Excitation dynamics in biomolecular systems.

I. – Introduction . . . . .	» 481
1. Biomolecules and their special nature . . . . .	» 481
1'1. Lipids . . . . .	» 482
1'2. Nucleic acids . . . . .	» 482
1'3. Proteins . . . . .	» 483
1'4. Porphyrins and other molecules . . . . .	» 484
2. Electronic states of typical biomolecular chromophores . . . . .	» 485
2'1. The Platt model . . . . .	» 485
2'2. Modern computations . . . . .	» 487
3. Dimers and trimers: excitons? . . . . .	» 487
3'1. Elementary theory . . . . .	» 487
3'2. Vibrational-state complications . . . . .	» 490
3'3. Possible occurrence in biosystems . . . . .	» 491
II. – Excited states of biomolecular aggregates . . . . .	» 492
4. Introduction . . . . .	» 492
4'1. Nature of biological aggregates . . . . .	» 492
4'2. Real- and momentum-space representations of excitons . . . . .	» 493
5. Helical polymers . . . . .	» 494
5'1. Excitons . . . . .	» 494
5'2. Vibrations . . . . .	» 495
6. Exciton diffusion . . . . .	» 496
6'1. Förster theory and the antenna concept . . . . .	» 496
6'2. Coherence and trapping . . . . .	» 497
7. Exciton annihilation . . . . .	» 497
7'1. Annihilation as an autoionization or transfer process . . . . .	» 497
7'2. Evidence for occurrence . . . . .	» 498
7'3. Effect of exciton coherence . . . . .	» 499
8. Excitations of protein and DNA: remarks . . . . .	» 499
8'1. Excitons . . . . .	» 499
8'2. Solitons . . . . .	» 499

III. - Further applications: the photosynthetic apparatus . . . pag. 500

9. The photosynthetic unit and the antenna concept . . . . . » 500

    9'1. Introduction . . . . . » 500

    9'2. Chloroplast fluorescence at 77 K. . . . . » 501

    9'3. Subchloroplast particle fluorescence . . . . . » 503

10. Other porphyrin-based systems . . . . . » 504

IV. - Summary . . . . . » 505
