

Contents

CHAPTER 1. INTRODUCTION	1
1-1. Organization of the Book	2
1-2. Contents of the Book	3
References	4
CHAPTER 2. REPRESENTATION OF PHYSICAL QUANTITIES BY MATHEMATICAL FUNCTIONS	5
2-1. Classes and Properties of Functions	5
2-2. Complex Numbers and Phasors	18
2-3. Representation of Physical Quantities	29
References	39
Problems	39
CHAPTER 3. SPECIAL FUNCTIONS	40
3-1. One-Dimensional Functions	41
3-2. The Impulse Function	50
3-3. Relatives of the Impulse Function	57
3-4. Two-Dimensional Functions	66
3-5. Two-Dimensional Functions of the Form	
$f[w_1(x, y), w_2(x, y)]$	77
References	96
Problems	96
CHAPTER 4. HARMONIC ANALYSIS	99
4-1. Orthogonal Expansions	99
4-2. The Fourier Series	107
4-3. The Fourier Integral	111
4-4. Spectra of Some Simple Functions	113

4-5. Spectra of Two-Dimensional Functions	128
References	133
Problems	134
CHAPTER 5. MATHEMATICAL OPERATORS AND PHYSICAL SYSTEMS	135
5-1. System Representation by Mathematical Operators	136
5-2. Some Important Types of Systems	137
5-3. The Impulse Response	143
5-4. Complex Exponentials: Eigenfunctions of Linear Shift-Invariant Systems	144
References	148
Problems	148
CHAPTER 6. CONVOLUTION	150
6-1. The Convolution Operation	150
6-2. Existence Conditions	156
6-3. Properties of Convolution	158
6-4. Convolution and Linear Shift-Invariant Systems	167
6-5. Cross Correlation and Autocorrelation	172
References	176
Problems	176
CHAPTER 7. THE FOURIER TRANSFORM	179
7-1. Introduction to the Fourier Transform	179
7-2. Interpretations of the Fourier Transform	186
7-3. Properties of the Fourier Transform	192
7-4. Elementary Fourier Transform Pairs	201
7-5. The Fourier Transform and Linear Shift-Invariant Systems	208
7-6. Related Topics	212
References	217
Problems	217
CHAPTER 8. CHARACTERISTICS AND APPLICATIONS OF LINEAR FILTERS	223
8-1. Linear Systems as Filters	223
8-2. Amplitude Filters	225
8-3. Phase Filters	234

8-4. Cascaded Systems.	242
8-5. Combination Amplitude and Phase Filters	243
8-6. Signal Processing with Linear Filters	248
8-7. Signal Sampling and Recovery	266
References	285
Problems	285

CHAPTER 9. TWO-DIMENSIONAL CONVOLUTION AND FOURIER TRANSFORMATION **290**

9-1. Convolution in Rectangular Coordinates	290
9-2. Convolution in Polar Coordinates	298
9-3. The Fourier Transform in Rectangular Coordinates	306
9-4. The Hankel Transform	317
9-5. Determination of Transforms by Numerical Methods	333
9-6. Two-Dimensional Linear Shift-Invariant Systems	334
References	345
Problems	346

CHAPTER 10. THE PROPAGATION AND DIFFRACTION OF OPTICAL WAVE FIELDS **349**

10-1. Mathematical Description of Optical Wave Fields	349
10-2. The Scalar Theory of Diffraction	361
10-3. Diffraction in the Fresnel Region	365
10-4. Diffraction in the Fraunhofer Region	375
10-5. A Less-Restrictive Formulation of Scalar Diffraction Theory	385
10-6. Effects of Lenses on Diffraction	391
10-7. Propagation of Gaussian Beams	420
References	442
Problems	443

CHAPTER 11. IMAGE-FORMING SYSTEMS **449**

11-1. Image Formation with Coherent Light	449
11-2. Linear Filter Interpretation of Coherent Imaging	454
11-3. Special Configurations for Coherent Imaging	471
11-4. Experimental Verification of the Filtering Interpretation	479
11-5. Image Formation with Incoherent Light	483
11-6. Linear Filter Interpretation of Incoherent Imaging	490
11-7. Special Configurations for Incoherent Imaging	504

xiv Contents

11-8. Coherent and Incoherent Imaging: Similarities and Differences	507
References	514
Problems	515
APPENDIX 1. SPECIAL FUNCTIONS	521
Table A1-1. Special Functions	522
References	523
Table A1-2. Values of $\gamma_{\text{cyl}}(r; a)$ for Various Values of r and a	524
APPENDIX 2. ELEMENTARY GEOMETRICAL OPTICS	526
A2-1. Simple Lenses	526
A2-2. Cardinal Points of a Lens	528
A2-3. Focal Length of a Lens	530
A2-4. Elementary Imaging Systems	533
A2-5. Image Characteristics	535
A2-6. Stops and Pupils	537
A2-7. Chief and Marginal Rays	539
A2-8. Aberrations and Their Effects	540
References	544
INDEX	545
