PREFACE

vii

CHAPTER 1 Fundamentals of Radiation and Its Interaction with Matter

1.1	Introduction and Orientation	1
	<i>Classical Optics. Electromagnetic Spectrum. The Optical Spectrum. Modern Optics. Applications.</i>	
1.2	Classical Model of Structure and Radiation	8
	<i>The Free Electron Model. The Classical Oscillator. The Oscillator Continuum.</i>	
1.3	Quantized Structure and Radiation	20
	<i>The Quantized Oscillator. The Corpuscular Nature of Light. Matter Waves. Dualism of Wave and Particle Model. The Uncertainty Principle.</i>	
1.4	Processes of Interaction	25
	References	26
	General Bibliography	27

CHAPTER 2 The Emission and Absorption of Heat Radiation

2.1	Geometrical Relationships in Radiation Theory	29
	<i>Brightness and Lambert's Cosine Relation. Radiant Flux. Energy Density.</i>	
2.2	Radiation Laws of Thermodynamic Origin	33
	<i>Kirchhoff's Law. Spectral Emissivities and Black Body Radiation. The Stefan-Boltzmann Law. Wien's Displacement Law.</i>	
2.3	Quantum Models and Statistics	40
	<i>Planck's Radiation Law and Its Approximations. Bose-Einstein Distribution of Photon Energies.</i>	
2.4	Sources of Heat Radiation Continua	50
	<i>The Practical Realization of Black Body Cavities. Solid Radiators of Known Emissivity. Thermal Radiation from Plasmas. Natural Sources of Heat Radiation.</i>	
	References	66

CHAPTER 3 Emission and Absorption of Nearly Monochromatic Radiation

3.1	Radiation Field of the Classical Oscillator	69
	<i>Hertzian Dipoles and Multipoles. Dipole Radiation Pattern. Radiation Power of the Classical Oscillator. Absorption.</i>	
3.2	Discrete Energy States of the Atom	78
	<i>Experimental Background. Bohr Atom. The Schrödinger Wave Equation.</i>	

3.3	Transition Probabilities and Intensities	87
	<i>Einstein Transition Probabilities. Transition Probabilities in Quantum Mechanics. Theory of Line Intensities. Experimental Determination of the Intensity Parameters. Test of the Physical Model.</i>	
3.4	Shape and Broadening of Spectral Lines	120
	<i>Natural Line Width. Doppler Broadening. Pressure Broadening. Comparison of Broadening Effects and Their Magnitudes.</i>	
	References	139

CHAPTER 4 Spectra of Atoms, Molecules, and Solids

4.1	Atomic Spectra for One Valence Electron	142
	<i>Spectra and Degrees of Freedom. The Spectra of Hydrogenlike Atoms. Term Schemes and Designations. Selection Rules. Hydrogenlike Electron States Including Spin. Magnetic Moments and Term Splitting.</i>	
4.2	Nuclear Properties and Hyperfine Structure	165
	<i>Isotope Shifts. Nuclear Moments and Hyperfine Structure. Experimental Aspects of Hyperfine Structure.</i>	
4.3	Atomic Spectra for Multiple-Valence Electrons	174
	<i>Electron Configurations of the Elements. The Coupling of Multiple-Valence Electrons.</i>	
4.4	Metastable States, Forbidden Lines, and Multipole Radiation	182
	<i>Transition Probabilities for Multipole Radiation. Selection Rules for Multipole Radiation.</i>	
4.5	Molecular Spectroscopy	187
	<i>Structure and Spectra. The Quantized Rotator and Far Infrared Radiation. The Quantized Oscillator and Its Infrared Spectrum. Electronic Transitions and Raman Effect.</i>	
4.6	The Spectra of Solids	199
	<i>Structure and Energy in Solids. Classification and General Properties of Solid State Spectra. Plasma Oscillations. Transitions between Localized States. Transitions between Nonlocalized States.</i>	
	References	237

CHAPTER 5 Phenomena of Propagation

5.1	Electromagnetic Waves in Various Media	241
	<i>Propagation in Dielectric Media. Propagation in Conductors. Electromagnetic Waves at Boundaries.</i>	
5.2	Optical Properties of the Materials	265
	<i>General Relationships. Dispersion Theory of Dielectric Media. Experimental Procedures and Results of Dielectric Optics. Free Electron Model and Optics of Metals. Optics of Liquids and Liquid Crystals.</i>	
	References	300

CHAPTER 6 Interactions of Coherent Radiation with Matter

6.1	Introduction and Fundamental Concepts	302
6.2	Criteria and Propagation Phenomena of Coherence <i>Coherence in Time. Coherence in Space. Mutual Coherence Function and Fringe Visibility. Coherence Properties of Thermal Light Sources. Photon Correlation Experiments. Coherence Criteria for Nonthermal Sources.</i>	306
6.3	Optical Masers <i>Theory of Laser Operation. Excitation Methods and Practical Masers. Technology and Systems for Lasers.</i>	325
6.4	Nonlinear Optics <i>Optical Harmonics. Secondary Nonlinear Effects.</i>	369
	References	378

CHAPTER 7 Secondary Effects of Light and Processes of Detection

7.1	Photoeffects <i>The Photoelectric Effect. The External Photoelectric Effect in Semiconductors and Insulators. Photoconductivity.</i>	383
7.2	Fluctuation Processes and Noise <i>Mean Fluctuations of Random Events. Shot Noise. Johnson Noise. Photon Noise. Temperature Noise. The Einstein- Fowler Equation. Fluctuations Due to Structure.</i>	414
7.3	Practical Detectors of Optical Radiation <i>Definition and Evaluation of Detector Characteristics. Thermal Detectors. Photodetectors. Resonance Detectors.</i>	422
	References	441
