	Foreword	ix
	Preface	xi
	Acknowledgments	xiii
1	Introduction	
	1.1 Radiometry	1
	1.2 Basic Concepts	4
	1.3 Characteristics of Radiometry	6
	1.4 Applications	8
	General References	9
2	Terminology and Units	
	2.1 Introduction	11
	2.2 Radiometric Quantities	12
	2.3 Photometric Quantities	12
	2.4 Photon Quantities	13
	2.5 Space Quantities	15
	2.6 Terms Connected with Detectors	15
	2.7 Reflection, Transmission, and Absorption	18
	2.8 Supplementary Terms	25
	References	28
3	Transfer of Radiant Energy	
	3.1 Introduction	30
	3.2 Spatial Distribution of Radiant Energy: Geometrical Optics	31

3.3	Spatial Distribution of Radiant Energy: Wave Optics	52
3.4	Transmission and Reflection at an Interface	79
3.5	Absorption and Scattering in a Medium	81
3.6	Emission	84
3.7	Polarization	86
3.8	Noise	90
	References	97
4	Blackbody Radiation	
4.1	Introduction	98
4.2	Angular Characteristics of Blackbody Radiation	99
4.3	Spectral Characteristics of Blackbody Radiation	102
4.4	Experimental Realization of a Blackbody Simulator	112
4.5	Kirchhoff's Law	113
	References	116
5	Radiation Sources	
5.1	Introduction	117
5.2	Natural Sources	118
5.3	Extraterrestrial Solar Radiation	126
5.4	Artificial Radiation Sources	129
5.5	D-Illuminants and Simulators	149
5.6	Plotting Radiant Energy Data	153
Appendix 5.1	Mainline Program for Correlated Color Temperature	156
Appendix 5.2	CIE Special Tristimulus Values and Chromaticity Coordinates	162
	References	172
6	Detectors	
6.1	Introduction	173
6.2	Review of Semiconductor Physics	174
6.3	Detection Parameters	177
6.4	Noise	181
6.5	Photon Detectors	186
6.6	Thermal Detectors	201
	References	212

7	Spectral Analyzers	
7.1	Introduction	214
7.2	Filters	214
7.3	Monochromators	222
7.4	Spectrometers	232
	References	236
8	Measurements of Radiant Power and Radiant Energy	
8.1	Introduction	238
8.2	Total Radiometric Measurements	240
8.3	Spectral Measurements	243
8.4	Radiance and Radiant Intensity of an Incoherent Source	253
8.5	Geometrically Total Radiant Power	255
8.6	Radiometric Temperature Measurement	257
8.7	Measurements of Emissivity	259
8.8	Laser Power and Energy Measurements	261
8.9	Blackbody Simulator Emissivity	265
8.10	Detector Measurements: Responsivity, Linearity, NEP, and D^*	265
	References	269
9	Measurements of Reflectance, Transmittance, and Absorptance	
9.1	Introduction	271
9.2	Origin of Spectra and Spectral Ranges	272
9.3	Processes Involved in Spectrophotometry	277
9.4	Methods of Measurement	280
9.5	Reflection	281
9.6	Transmission	289
9.7	Determination of the Spectral Transmittance of Transparent Materials	291
9.8	Measurement of Direct Absorptance	292
9.9	Sources of Measurement Errors	293
9.10	Special Spectrophotometric Techniques	294
	References	298
10	Standards and Calibration	
10.1	Introduction	301
10.2	Photometry and Radiometry	302

10.3	Spectral Irradiance and Radiance Standards	308
10.4	Absolute Radiometry	312
10.5	Spectrophotometric Standards	314
10.6	Concluding Remarks	325
	References	325
	Index	329
