

# Contents

<b>Contributors</b>	ix
<b>Preface</b>	xi
<b>1. Introduction</b>	
<i>C. J. Bartleson</i>	
A. The Purpose of This Volume	1
B. The Eye as an Optical System	3
C. The Eye as a Detector	4
D. Visual Pigments and Sensitivity	4
E. Mechanisms of Vision	4
F. Psychophysics	5
G. Thresholds and Matching	5
H. Measuring Differences	6
I. Direct Ratio Scaling	6
J. Multidimensional Scaling	7
K. Photometric Measurement	7
L. Colorimetric Measurement	7
<b>Part I Characteristics of the Visual Mechanism</b>	
<b>2. The Eye as an Optical System</b>	
<i>G. A. Fry</i>	
A. Introduction	12
B. Anatomy and Physiology of the Eye	13
C. The Eye as an Optical Device	24
D. Field of Vision for Normal Seeing	39
E. Retinal Images	42
F. Methods of Viewing	74
G. Chromatic Aberrations	78

H. Peripheral Vision	87
I. Magnification and Distortion	89
J. Transmittance and Stray Light	91
K. Fluorescence, Bioluminescence, and Electroluminescence	123
L. Polarization Effects	125
References	125
<b>3. The Eye as a Detector</b>	
<i>G. A. Fry</i>	
A. Introduction	131
B. Optics of the Retina	132
C. Thresholds	141
D. Visibility	176
References	179
<b>4. Visual Pigments and Sensitivity</b>	
<i>Robert M. Boynton</i>	
A. Introduction	183
B. Scotopic Spectral Sensitivity	192
C. Photopic Spectral Sensitivity	199
D. Cone Photopigments	205
E. Retinal Location and Visual Sensitivity	213
References	221
<b>5. Mechanisms of Vision</b>	
<i>C. J. Bartleson</i>	
A. Introduction	225
B. The Basic Neurophysiology of Vision	226
C. Visual Response Range	248
D. Color Vision	263
E. Brightness	282
F. Spatial Vision	298
G. Conclusions	321
References	323
<b>Part II Psychophysical Methods</b>	
<b>6. Psychophysics</b>	
<i>Robert M. Boynton</i>	
A. The Problem of Subjective Measurement	335
B. Classical (“Null-Instrument”) Psychophysics	343

<b>Contents</b>	<b>vii</b>
C. The Theory of Signal Detection (TSD)	355
D. Methods for Estimating Sensory Magnitudes	357
E. Miscellaneous Concerns about Psychophysical Experiments	361
References	364
<b>7. Thresholds and Matching</b>	
<i>C. J. Bartleson</i>	
A. Introduction	368
B. Probability Distributions	382
C. Representing Experimental Data with Probability Distributions	397
D. Psychophysical Methods	407
References	439
<b>8. Measuring Differences</b>	
<i>C. J. Bartleson</i>	
A. Introduction	442
B. The Rank-Order Method	448
C. The Paired-Comparison Method	455
D. The Rating-Scale Method	467
E. The Category Method	472
F. Some Reflections on Interval Scaling	483
G. Conclusions	487
References	487
<b>9. Direct Ratio Scaling</b>	
<i>C. J. Bartleson</i>	
A. Introduction	491
B. An Example of Magnitude Estimation of Colorfulness	501
References	505
<b>10. Multidimensional Scaling</b>	
<i>C. J. Bartleson</i>	
A. Introduction	510
B. Multiple Regression	511
C. Multivariate Analysis	523
D. Multidimensional Scaling	526
E. Examples of MDS	544
F. Conclusions	555
References	556

**Part III Advanced Methods of Photometry and Colorimetry****11. Photometric Measurements***Peter K. Kaiser*

A. Introduction	563
B. Physical Photometry	564
C. Visual Photometry	568
D. Visual Photometers	569
E. Research Photometry	570
F. Methods for Equating Colored Lights for Brightness and for Determining Spectral Sensitivity Functions	573
G. Brightness and Lightness	598
H. Theoretical Considerations	602
I. Choosing the Best Method	608
References	611

**12. Colorimetric Measurements***C. J. Bartleson*

A. Introduction	615
B. Summary of Conventional Colorimetry	616
C. Threshold Color Differences	620
D. Suprathreshold Color Relations	631
E. Chromatic Adaptation	639
F. The Future of Color Measurement	646
Reference	651

<b>Index</b>	<b>655</b>
