## 1. Introduction

By S. Haykin (With 3 Figures) . . . . .	1
1.1 Time Series . . . . .	1
1.1.1 Autocorrelation and Autocovariance Functions . . . . .	1
1.1.2 Spectral Density . . . . .	2
1.1.3 Linear Filtering . . . . .	3
1.2 Modeling of Time Series . . . . .	4
1.3 Linear and Nonlinear Methods of Spectral Analysis . . . . .	4
1.4 Organization of the Volume . . . . .	7
References . . . . .	8

## 2. Prediction-Error Filtering and Maximum-Entropy Spectral Estimation

By S. Haykin and S. Kesler (With 16 Figures) . . . . .	9
2.1 Wiener Filters . . . . .	9
2.1.1 Wiener–Hopf Equation . . . . .	10
2.1.2 Minimum Error Power . . . . .	13
2.2 Prediction-Error Filter . . . . .	13
2.2.1 Prediction-Error Filter Equations . . . . .	15
2.3 Maximum-Entropy Spectral Estimator . . . . .	16
2.4 Recursive Formulas for Calculating the Prediction-Error Filter Coefficients and Minimum Error Power . . . . .	21
2.5 Optimum Procedure for Calculating the Reflection Coefficients . . . . .	23
2.6 Lattice Equivalent Model . . . . .	27
2.7 Properties of the Prediction-Error Filter . . . . .	30
2.7.1 Consequences of the Orthogonality and Decoupling Properties . . . . .	35
2.8 Maximum-Entropy Extension of the Autocorrelation Function . . . . .	36
2.9 Statistical Properties of the Maximum-Entropy Spectral Estimator . . . . .	40
2.10 Choice of Filter Order . . . . .	41
2.11 Experimental Classification of Radar Clutter . . . . .	49
2.11.1 Modeling of Radar Clutter as an Autoregressive Process . . . . .	49
2.11.2 Experimental Results . . . . .	50
2.12 Multichannel Maximum-Entropy Spectral Estimation . . . . .	53
2.13 Conclusions . . . . .	61

Appendix A: Properties of the Autocorrelation Matrix . . . . .	62
Appendix B: Entropy of a Gaussian Process . . . . .	67
Appendix C: Flow Graph for Calculating the Prediction-Error Filter Coefficients . . . . .	70
References . . . . .	70
<b>3. Autoregressive and Mixed Autoregressive-Moving Average Models and Spectra.</b> By T. J. Ulrych and M. Ooe (With 13 Figures) . . . . .	73
3.1 Overview . . . . .	74
3.2 The General Time Series Model . . . . .	74
3.2.1 The MA Approximation . . . . .	75
3.2.2 The AR Approximation . . . . .	77
3.2.3 The ARMA Approximation . . . . .	77
3.2.4 Remarks . . . . .	78
3.3 Autoregressive Processes . . . . .	79
3.3.1 AR Spectra and Maximum Entropy . . . . .	79
Determination of the AR Order . . . . .	81
Resolution of the AR/ME Spectral Estimate . . . . .	82
The Smoothness of the AR/ME Estimator . . . . .	84
3.3.2 Estimation of the AR Parameters . . . . .	84
The Minimum Delay Property of the Unit PEO . . . . .	85
The Toeplitz Method . . . . .	86
The Yule-Walker Solution . . . . .	88
The Burg Solution . . . . .	90
The Least-Squares Method . . . . .	91
Remarks Concerning AR Parameter Determination . . . . .	92
3.4 Adaptive AR Processes . . . . .	94
3.4.1 The Adaptive LMS Algorithm . . . . .	94
3.4.2 Applications of Adaptive AR Modeling . . . . .	100
3.5 Autoregressive-Moving Average Processes . . . . .	101
3.5.1 The ARMA Model for Sinusoids Plus White Noise . . . . .	102
3.5.2 Relationship Between the Pisarenko and the AR/ME Spectral Estimators . . . . .	104
3.5.3 Remarks Concerning the Pisarenko Estimate . . . . .	105
3.5.4 Determination of Parameters of the General ARMA Process . . . . .	107
The Method of <i>Treitel et al.</i> . . . . .	108
The Method of <i>Akaike</i> . . . . .	110
Remarks Concerning the Computation of ARMA Models .	113
3.6 AIC, FPE, and Autocovariance Estimators . . . . .	114
3.6.1 The AIC Criterion . . . . .	114
3.6.2 AIC and the Normal Distribution . . . . .	116
3.6.3 The FPE Criterion . . . . .	118
3.6.4 Autocovariance Estimators . . . . .	118

3.7	Numerical Example: Application of AR and ARMA Models to Polar Motion . . . . .	119
3.7.1	The ARMA Model of the Chandler Wobble . . . . .	120
3.7.2	Numerical Computations . . . . .	121
3.8	Conclusions . . . . .	122
	References . . . . .	123

#### **4. Iterative Least-Squares Procedure for ARMA Spectral Estimation**

By E. A. Robinson (With 12 Figures) . . . . .	127
4.1 Basic Time Series Models . . . . .	127
4.2 Parsimony and the Physical Model . . . . .	130
4.3 Seismic Deconvolution and the Resulting Spectral Estimate . . . . .	132
4.4 Design of Shaping and Spiking Filters . . . . .	143
4.5 Invertibility . . . . .	147
4.6 Spectral Estimates of the Components of a Noninvertible ARMA System . . . . .	148
4.6.1 Example . . . . .	150
4.7 Conclusions . . . . .	152
References . . . . .	153

#### **5. Maximum-Likelihood Spectral Estimation**

By J. Capon (With 1 Figure) . . . . .	155
5.1 Explanatory Remarks . . . . .	155
5.2 Seismic Signals and Noise . . . . .	156
5.2.1 Statistical Models for Seismic Noise and Signal . . . . .	157
5.3 Optimum Detector for Seismic Arrays . . . . .	157
5.3.1 Evaluation of the Likelihood Ratio . . . . .	158
5.4 Signal Estimation Procedures . . . . .	161
5.4.1 Maximum-Likelihood Estimation . . . . .	161
5.4.2 Minimum-Variance Unbiased Estimation . . . . .	164
5.4.3 Case When Slowness Vector of Signal is Unknown . . . . .	165
5.5 Frequency Wave Number Power Spectrum . . . . .	165
5.5.1 Definition . . . . .	166
5.5.2 Properties . . . . .	168
5.5.3 Relation to Coherence . . . . .	170
5.6 Estimation of Frequency Wave Number Power Spectrum . . . . .	173
5.6.1 Spectral Matrix Estimation Procedure . . . . .	174
5.6.2 Conventional Method . . . . .	176
5.6.3 High-Resolution Method . . . . .	177
5.6.4 Estimation of Coherence . . . . .	178
5.7 Conclusions . . . . .	179
References . . . . .	179

<b>6. Application of the Maximum-Likelihood Method and the Maximum-Entropy Method to Array Processing.</b> By R. N. McDonough . . . . .	181
6.1 Overview . . . . .	181
6.2 The Wave Number Spectrum and Its Estimation by Linear Processing . . . . .	184
6.2.1 Spectral Representation of a Stochastic Process . . . . .	184
6.2.2 Conventional Linear Spectrum Analysis . . . . .	188
6.2.3 Linear Estimation of the Frequency Wave-Number Spectrum . . . . .	193
6.2.4 A Word on Sampled Data . . . . .	196
6.3 The Maximum-Likelihood Processor in the Spatial Domain . . . . .	197
6.3.1 Linear Maximum-Likelihood Processing . . . . .	198
6.3.2 The (Nonlinear) Maximum-Likelihood Array Processor .	205
6.3.3 The Maximum-Likelihood Estimator as a Filter in Wave Number Space . . . . .	209
6.3.4 The Effect of Signal Mismatch on the Maximum-Likelihood Processor . . . . .	211
6.3.5 Adaptive Wave Number Filters . . . . .	215
6.4 The Maximum-Entropy Method in Array Processing . . . . .	220
6.4.1 The Information-Theoretic Basis of Maximum-Entropy Analysis . . . . .	221
6.4.2 The Principle of Maximum Entropy . . . . .	225
6.4.3 Maximum-Entropy Spatial Processing . . . . .	230
6.4.4 Maximum-Entropy Processing for a Uniformly Spaced Line Array . . . . .	233
6.4.5 Remarks on Nonuniform Sample Spacing . . . . .	239
6.4.6 Direction Finding with a Line Array . . . . .	241
6.5 Conclusions . . . . .	242
References . . . . .	243
