

## CONTENTS

	PAGE
INTRODUCTION.....	1
General remarks, 1—Symmetry of polyatomic molecules, 2	
CHAPTER I: ELECTRONIC STATES.....	7
1. ELECTRONIC ENERGY, ELECTRONIC EIGENFUNCTIONS, POTENTIAL SURFACES.....	7
Total energy and electronic energy; potential surfaces, 7—Total and electronic eigenfunction, 8—Classification of electronic states, 9—Electronic angular momentum, 12—Multiplicity, 13—Spin functions, 14—Species of multiplet components, 17—Magnitude of multiplet splitting, 19—Mutual perturbation of electronic states, 19	
2. VIBRATIONAL STRUCTURE OF ELECTRONIC STATES, INTERACTION OF VIBRATION AND ELECTRONIC MOTION.....	20
(a) Non-degenerate electronic states.....	20
Vibronic energies, 20—Vibronic eigenfunction and vibronic species, 21—Correlation of vibronic levels for planar and non-planar equilibrium conformation, 22	
(b) Degenerate electronic states: linear molecules.....	23
Vibronic species, 23—Vibronic angular momentum, 24—Vibronic interaction (Renner–Teller effect) in singlet electronic states, 26—Vibronic interaction in doublet states, 34—Vibronic interaction in triplet states, 37	
(c) Degenerate electronic states: non-linear molecules.....	37
Vibronic species, 37—The Jahn–Teller theorem, 40—Effect of electron spin on Jahn–Teller instability, 51—Vibronic energy levels, 54—Correlation of vibronic levels, 59—Vibronic eigenfunctions, 62—Vibronic angular momentum, 63	
(d) Vibronic interactions of different electronic states.....	65
General remarks, 65—Interaction of electronic states of the same species, 65—Interaction of electronic states of different species, 66—Selection rules for vibronic perturbations, 66	
3. ROTATIONAL STRUCTURE OF ELECTRONIC STATES; COUPLING OF ROTATION WITH VIBRATION AND ELECTRONIC MOTION.....	68

	PAGE
(a) Linear molecules . . . . .	69
Rotational levels in $^1\Sigma$ electronic states, 69—Rotational levels in $^1\Pi$ , $^1\Delta$ , . . . electronic states, 72—Rotational levels in $^2\Sigma$ and $^3\Sigma$ electronic states, 73—Rotational levels in $^2\Pi$ electronic states, 75—Rotational levels in other multiplet states, 81	
(b) Symmetric top molecules . . . . .	82
Rotational levels in non-degenerate vibrational levels of non-degenerate singlet electronic states, 82—Rotational levels in degenerate vibrational levels of non-degenerate singlet electronic states, 84—Rotational levels in degenerate singlet electronic states, 86—Rotational levels in multiplet electronic states, 87—Symmetry properties of rotational levels, 90— $l$ -type doubling, 94— $j$ -type doubling, 96—Other effects of higher order rovibronic interactions, 97	
(c) Spherical top molecules . . . . .	99
Symmetry properties of rotational levels, 99—Fine structure in non-degenerate vibronic states, 101—Fine structure in degenerate vibronic states, 103	
(d) Asymmetric top molecules . . . . .	104
General rotational energy formulae, 104—Approximations for nearly symmetric tops, 106—Centrifugal distortion, 108—Symmetry properties of rotational levels, 109—Sum rules, 114—Spin splitting 116—Perturbations, 118	
(e) Other types of molecules . . . . .	118
Molecules with free internal rotation, 118—Molecules with hindered rotation, 119—Molecules with inversion doubling, 119—Quasi-linear molecules, 119	
4. EFFECTS OF MAGNETIC AND ELECTRIC FIELDS ON THE ENERGY LEVELS . . . . .	122
Zeeman effect in non-degenerate electronic states, 122—Zeeman effect in orbitally degenerate electronic states, 125—Stark effect, 126	
CHAPTER II: ELECTRONIC TRANSITIONS . . . . .	128
1. TYPES OF ELECTRONIC TRANSITIONS . . . . .	128
(a) Allowed electronic transitions . . . . .	128
General selection rule, 128—Spin selection rule, 131—Application to the more important point groups, 132	
(b) Forbidden electronic transitions . . . . .	133
( $\alpha$ ) Magnetic dipole and electric quadrupole transitions . . .	134
( $\beta$ ) Intercombinations . . . . .	136
( $\gamma$ ) Transitions due to vibronic interactions . . . . .	137
( $\delta$ ) Transitions due to rotational-electronic interactions . .	141
(e) Enforced dipole transitions . . . . .	142

	PAGE
2. VIBRATIONAL STRUCTURE OF ELECTRONIC TRANSITIONS.....	142
(a) Structure of a band system: unsymmetrical molecules....	142
General formulae, 142—Progressions, 143—Sequences, 146—Intensity distribution, Franck-Condon principle, 148	
(b) Structure of a band system: symmetrical molecules.....	150
( $\alpha$ ) Allowed electronic transitions.....	150
General selection rule, 150—Transitions between non- degenerate electronic states, 151—Transitions be- tween electronic states at least one of which is degenerate, 157—Transitions between states with different symmetry of the equilibrium conformation, 167	
( $\beta$ ) Forbidden electronic transitions.....	173
Selection rules, 174—Forbidden transitions between non-degenerate electronic states, 175—Forbidden transitions between electronic states at least one of which is degenerate, 179	
(c) Isotope effects.....	181
General formulae, 181—Examples, 182	
3. ROTATIONAL STRUCTURE OF ELECTRONIC TRANSITIONS.....	183
(a) Linear molecules.....	184
( $\alpha$ ) Linear-linear transitions.....	184
Singlet bands, 184—Doublet bands, 186—Triplet bands, 192—Intercombinations, 193	
( $\beta$ ) Bent-linear and linear-bent transitions.....	193
Main bands of bent-linear transitions, 193—Hot bands of bent-linear transitions, 202—Linear-bent transitions, 209—Linear-bent transitions between Renner-Teller states, 213—Emission spectra, 218— Multiplet splitting, 219—Forbidden transitions, 221	
(b) Symmetric top molecules.....	222
Selection rules, 223—Transitions between non-degenerate states ( $\parallel$ bands), 225—Transitions between a degenerate and a non-degenerate state ( $\perp$ bands), 230—Transitions between two degenerate states, 238—Multiplet tran- sitions, 241—Forbidden transitions, 241	
(c) Spherical top molecules.....	243
(d) Asymmetric top molecules.....	244
( $\alpha$ ) General selection rules.....	244
( $\beta$ ) Slightly asymmetric tops.....	247
Parallel bands, 248—Perpendicular bands, 251— Hybrid bands, 260—Unresolved bands, 260	
( $\gamma$ ) Strongly asymmetric tops.....	261

	PAGE
( $\delta$ ) Forbidden transitions . . . . .	265
Transitions induced by Coriolis interaction, 265— Triplet—singlet transitions, 268—Magnetic dipole transitions, 270	
4. ZEEMAN AND STARK EFFECTS . . . . .	271
Selection rules, 271—Zeeman patterns, 271—Magnetic rotation spectra, 273—Stark patterns, 274	
CHAPTER III: BUILDING-UP PRINCIPLES, ELECTRON CON- FIGURATIONS AND STABILITY OF ELECTRONIC STATES	276
1. CORRELATION OF ELECTRONIC STATES . . . . .	276
(a) Derivation of molecular electronic states from those of the united atom or molecule . . . . .	277
(b) Correlation of electronic states for different conformations of a given molecule . . . . .	279
(c) Derivation of molecular electronic states from those of the separated atoms or groups of atoms . . . . .	281
( $\alpha$ ) Linear molecules . . . . .	281
Unsymmetrical molecules (point group $C_{\infty v}$ ), 281— Symmetrical molecules (point group $D_{\infty h}$ ), 284	
( $\beta$ ) Non-linear molecules . . . . .	287
Building-up from individual atoms, 287—Building-up from unlike groups, 291—Building-up from like groups, 294	
2. ELECTRON CONFIGURATIONS . . . . .	296
(a) Classification of orbitals . . . . .	296
Mathematical formulation: molecular (symmetry) or- bitals, 298—Species of orbitals formed from equivalent atoms (group orbitals), 303—Localized and equivalent orbitals, 305—Spin-orbitals, 312	
(b) Order and correlation of orbitals . . . . .	312
Linear $XY_2$ molecules, 312—Bent $XY_2$ molecules, 316— Planar and non-planar $XH_3$ molecules, 318—Tetrahedral $XH_4$ and $XY_4$ molecules, 321—Octahedral $XY_6$ mole- cules, 322—Planar $H_2XY$ molecules, 323—Planar $X_2H_4$ molecules, 324— $X_2H_6$ molecules of $D_{3d}$ symmetry, 326— $\pi$ orbitals in benzene and other unsaturated molecules, 327	
(c) Molecular wave functions and the Pauli principle . . . . .	330
Electronic states resulting from non-equivalent electrons, 330—Electronic states resulting from equivalent elec- trons, 331—Configurations with equivalent and non- equivalent electrons, 333—Antisymmetrized wave func- tions, 334—Hartree-Fock self-consistent field molecular orbitals, 336—Large spin-orbit coupling, 337	

	PAGE
(d) Term manifold of the molecule, examples . . . . .	339
Rydberg series of states, 340—Term manifold of non-linear $XH_2$ molecules, 341—Term manifold of linear $XH_2$ molecules, 343—Term manifold of linear and non-linear $XY_2$ molecules, 344—Term manifold of $XH_3$ molecules, 346—Term manifold of tetrahedral $XH_4$ molecules, 348—Term manifold of $H_2CO$ , 348—Term manifold of $C_2H_4$ , 348—Term manifold of $C_6H_6$ , 349—Term manifold of the $Cr^{+++}$ ion in an octahedral complex, 350	
3. STABILITY OF MOLECULAR ELECTRONIC STATES: VALENCE . . . . .	351
(a) The valence-bond (or electron-pair bond) method . . . . .	352
The elementary Heitler–London theory, 352—Heitler and Rumer’s extension of the Heitler–London theory, 354—Slater and Pauling’s extension of the Heitler–London theory: $p$ -valence, 358— $s$ - $p$ hybridization, 361— $\pi$ bonds, 364—Resonance in the valence-bond method, 366— $d$ -valence, 373—Excited states, 375	
(b) The molecular orbital method . . . . .	376
( $\alpha$ ) Basic idea . . . . .	376
Bonding, anti-bonding and non-bonding electrons, 376—Resonance and the one-electron bond, 377—Contribution of ionic states, 378—Delocalization, 378—Charge distribution, population analysis, 379	
( $\beta$ ) Ground states . . . . .	385
The ground state of $H_2O$ , 385—The ground state of $NH_3$ , 390—The ground state of $CH_4$ , 392—The ground state of $CO_2$ , 393—The ground state of $C_2H_4$ , 394—Saturation of valencies, 396—The ground state of $C_6H_6$ , 397—Conjugation and hyperconjugation, 400—Configuration interaction, 402—Free electron model, 403—Molecules containing atoms of transition elements (so-called ligand-field theory), 405	
( $\gamma$ ) Excited states . . . . .	411
Rydberg states, 411—Sub-Rydberg states, 415—Intensities of electronic transitions, 417	
(c) Intermolecular forces . . . . .	419
Van der Waals forces, 419—Hydrogen bonding, 421—Charge-transfer forces, 426	
CHAPTER IV. DISSOCIATION, PREDISSOCIATION AND RECOMBINATION: CONTINUOUS AND DIFFUSE SPECTRA	429
1. POTENTIAL SURFACES . . . . .	429
Symmetric linear triatomic molecules, 429—Asymmetric linear triatomic molecules, 437—Non-linear symmetric triatomic molecules, 437—More complicated cases, 442—Non-crossing rule and conical intersections, 442	

	PAGE
2. CONTINUOUS SPECTRA: DISSOCIATION OF POLYATOMIC MOLECULES.....	445
(a) Absorption continua.....	445
Upper state with stable equilibrium position, 445—Upper state without stable equilibrium position, 448—Intensity distribution, 451—Isotope shifts, 453—Both upper and lower state without stable equilibrium position, 453	
(b) Emission continua.....	454
Upper state continuous, 454—Lower state continuous, 455	
3. DIFFUSE SPECTRA: PREDISSOCIATION OF POLYATOMIC MOLECULES.....	455
Criteria for predissociation, 456—Types of predissociation, 458—Selection rules for predissociation, 458—Case I of predissociation, 463—Dependence on $J$ and $K$ , 468—Case II of predissociation, 469—Unimolecular decompositions, 471—Case III of predissociation, 473—Inverse predissociation, recombination in a two-body collision, 473—Three-body recombinations, 479	
4. DETERMINATION OF DISSOCIATION ENERGIES.....	482
Determination of dissociation limits, 482—Determination of the dissociation products, 486	
 CHAPTER V: ELECTRONIC SPECTRA OF INDIVIDUAL MOLECULES AND THEIR INTERPRETATION.....	 488
1. Triatomic Molecules.....	488
(a) Di-hydrides.....	488
H <sub>2</sub> O and H <sub>2</sub> S, 489—BH <sub>2</sub> and AlH <sub>2</sub> , 490—CH <sub>2</sub> , 491—NH <sub>2</sub> , 493—SiH <sub>2</sub> and PH <sub>2</sub> , 493	
(b) Mono-hydrides.....	493
HCN, 493—HCP, 495—HCO, 495—HNO, 496—HPO, 497—HSiCl and HSiBr, 497—HCF and HCl, 498	
(c) Non-hydrides.....	498
C <sub>3</sub> , 498—CCN and CNC, 498—NCN, 499—BO <sub>2</sub> , CO <sub>2</sub> <sup>+</sup> , CS <sub>2</sub> <sup>+</sup> , N <sub>3</sub> , NCO, N <sub>2</sub> O <sup>+</sup> , 499—CO <sub>2</sub> , 500—CS <sub>2</sub> , 504—N <sub>2</sub> O, 505—NO <sub>2</sub> , 507—CF <sub>2</sub> , 510—O <sub>3</sub> , 510—SO <sub>2</sub> , 511	
2. FOUR-ATOMIC MOLECULES.....	513
(a) Tri-hydrides.....	513
CH <sub>3</sub> , 513—NH <sub>3</sub> , 515	
(b) Di-hydrides.....	517
C <sub>2</sub> H <sub>2</sub> , 517—H <sub>2</sub> CO, 518	

	PAGE
(c) Mono-hydrides.....	522
HNCN, 522—HONO, 523—HFCO, 524	
(d) Non-hydrides.....	524
C <sub>2</sub> N <sub>2</sub> , 524—NO <sub>3</sub> , 525—Cl <sub>2</sub> CO, 525—Cl <sub>2</sub> CS, 526	
3. FIVE-ATOMIC MOLECULES.....	526
(a) Tetra-hydrides.....	526
CH <sub>4</sub> (methane), 526	
(b) Tri-hydrides.....	528
CH <sub>3</sub> I, 528	
(c) Di-hydrides.....	530
H <sub>2</sub> CCO (ketene), 530—H <sub>2</sub> CN <sub>2</sub> (diazomethane), 530	
(d) Mono-hydrides.....	531
NC-C <sub>2</sub> H (cyano-acetylene), 531	
(e) Non-hydrides.....	532
CF <sub>3</sub> I, 532—OsO <sub>4</sub> , 533	
4. SIX-ATOMIC MOLECULES.....	533
(a) Tetra-hydrides.....	533
C <sub>2</sub> H <sub>4</sub> and C <sub>2</sub> D <sub>4</sub> , 533—CH <sub>3</sub> SH, 535	
(b) Tri-hydrides.....	535
CH <sub>3</sub> CN (acetonitrile), 535—C <sub>2</sub> H <sub>3</sub> Cl (vinyl chloride), 536	
(c) Di-hydrides.....	536
C <sub>4</sub> H <sub>2</sub> and C <sub>4</sub> H <sub>2</sub> <sup>+</sup> (diacetylene), 536—HC <sub>2</sub> CHO (propy- nal), 537—C <sub>2</sub> H <sub>2</sub> O <sub>2</sub> (glyoxal), 538—C <sub>2</sub> H <sub>2</sub> Cl <sub>2</sub> ( <i>cis</i> -, <i>trans</i> - and 1,1-dichloroethylene), 539	
(d) Mono-hydrides.....	540
C <sub>2</sub> HCl <sub>3</sub> (trichloroethylene), 540	
(e) Non-hydrides.....	540
C <sub>2</sub> O <sub>2</sub> Cl <sub>2</sub> (oxalyl chloride), 540—C <sub>2</sub> Cl <sub>4</sub> , 541	
5. SEVEN-ATOMIC MOLECULES.....	541
CH <sub>3</sub> NH <sub>2</sub> , 541—C <sub>3</sub> H <sub>4</sub> (allene), 541—CH <sub>3</sub> C <sub>2</sub> H (methyl acetylene), 542—CH <sub>3</sub> CHO (acetaldehyde), 542—C <sub>2</sub> H <sub>4</sub> O (ethylene oxide), 544—SF <sub>6</sub> , MoF <sub>6</sub> , WF <sub>6</sub> , UF <sub>6</sub> , 544	
6. EIGHT-ATOMIC MOLECULES.....	545
C <sub>2</sub> H <sub>6</sub> (ethane) and B <sub>2</sub> H <sub>6</sub> (diborane), 545—C <sub>2</sub> H <sub>5</sub> I (ethyl iodide), 546—C <sub>2</sub> H <sub>3</sub> CHO, 547	
7. NINE-ATOMIC MOLECULES.....	548
(CH <sub>3</sub> ) <sub>2</sub> O and (CH <sub>3</sub> ) <sub>2</sub> S, 548—C <sub>4</sub> H <sub>4</sub> O (furan), 548— C <sub>4</sub> H <sub>4</sub> S (thiophene), 549	

	PAGE
8. TEN-ATOMIC MOLECULES.....	549
$(C_2H_3)_2$ (1,3 butadiene), 549— $(CH_3)_2CO$ (acetone), 550	
— $C_4H_4NH$ (pyrrole), 551— <i>p</i> - $C_4H_4N_2$ (pyrazine), 551	
9. ELEVEN-ATOMIC MOLECULES. ....	553
$C_5H_6$ (1,3 cyclo-pentadiene), 553— $C_5H_5N$ (pyridine),	
554— $C_5H_4O_2$ (2-furfuraldehyde), 554	
10. TWELVE-ATOMIC MOLECULES.....	555
$CH_3C\equiv C-C\equiv CCH_3$ (dimethyldiacetylene), 555— $C_6H_6$	
(benzene), 555— $(CH_3CO)_2$ (biacetyl), 561—Other twelve-	
atomic molecules, 562	
APPENDIX I: Species and Characters of the Extended Point	
Groups.....	563
APPENDIX II: Species of Spin Functions for the More Important	
Point Groups.....	569
APPENDIX III: Direct Products of Representations (Species) for	
All Important Point Groups.....	570
APPENDIX IV: Resolution of Species of Symmetric Point Groups	
into Those of Point Groups of Lower Symmetry..	574
APPENDIX V: Molecular Orbitals (Group Orbitals) Formed from	
Atomic Orbitals of Equivalent Atoms.....	578
APPENDIX VI: Molecular Constants of the Electronic States of	
Molecules with Three to Twelve Atoms.....	580
APPENDIX VII: Physical Constants and Conversion Factors.....	669
BIBLIOGRAPHY.....	671
SUBJECT INDEX.....	699
AUTHOR INDEX.....	733
