

Contents

<i>Preface</i>	ix
<i>Acknowledgments</i>	xi
Chapter 1 Survey	
1.1 Introduction	1
1.2 Free Ions	3
1.3 Ions in Crystals	4
1.4 Electron–Phonon Interaction	8
1.5 Energy Transfer	9
1.6 Magnetic Interactions	10
1.7 Hyperfine Interactions	11
1.8 Jahn–Teller Effect	11
1.9 Divalent Ions	12
1.10 Rare Earths in Glasses	13
1.11 Rare Earth Lasers	13
Chapter 2 Free Ions	
2.1 Introduction	14
2.2 Matrix Elements of Tensor Operators	20
2.3 Coulomb and Spin–Orbit Energies; Intermediate Coupling	23

Chapter 3 Trivalent Ions in the Static Crystal Field

3.1	Introduction	38
3.2	Parametrization of the Crystal Field Splitting	41
3.3	The Spin Hamiltonian	54
3.4	Examples of Crystal Field Parametrization	55
3.5	Model Description of the Crystal Field	66
3.6	Classification of Crystal Field States and Selection Rules: Survey	72
3.7	Sketch of Group Theory	73
3.8	Kramer's Degeneracy	78
3.9	Group Theory and Crystal Field Energy Levels	79
3.10	Example of Crystal Field Splitting: D_{3h} Symmetry	81
3.11	Product of Two Representations: Selection Rules	86
3.12	Example of Selection Rules: D_{3h} Symmetry	87
3.13	Application of Theoretical Results to the Analysis of Experimental Data	90
3.14	The Zeeman Effect	94
3.15	Intensities	98
3.16	Phonon Sidebands	107
3.17	Satellites	111

Chapter 4 Trivalent Rare Earth Ions in a Phonon Field

4.1	Introduction	115
4.2	Optical Analog to the Mössbauer Effect	117
4.3	Effects of Acoustical Phonons	119
4.4	Effects of Optical Phonons	128

Chapter 5 Energy Transfer

5.1	Introduction and Theory	136
5.2	Energy Transfer in Rare Earth-Doped YF_3 and Y_2O_3	142

Chapter 6 Magnetic Interactions

6.1	Introduction	147
6.2	General Considerations	148
6.3	Experimental Results: Introduction	151
6.4	Molecular Field Approach: $ErCrO_3$, $YbIG$	151
6.5	Neighbor Interactions: $TbAlO_3$, $NdCl_3$, $DyVO_4$	158
6.6	Spin-Wave Sidebands: $GdCl_3$	171

Contents	<i>vii</i>
Chapter 7 Hyperfine Interactions	175
Chapter 8 Jahn–Teller Systems	
8.1 Introduction	180
8.2 Hamiltonian and Molecular Field Approximation	182
8.3 Typical System: TmVO_4	184
Chapter 9 Divalent Rare Earth Compounds: The Europium Chalcogenides	
9.1 Introduction	190
9.2 Crystal Field Interaction of One 5d Electron	191
9.3 Absorption Spectra of the Europium Chalcogenides	192
9.4 A Mixed Valence Compound: Eu_3O_4	198
Chapter 10 Rare Earths in Glasses	201
Chapter 11 Rare Earth Lasers	
11.1 Introduction	208
11.2 Principles of Laser Action	209
11.3 Typical Rare Earth Lasers: Nd:YAG and Nd:Glasses	212
References	217
<i>Index</i>	231
