

CONTENTS

<i>Preface</i>	vii
1. Introduction	1
1-1. The Present Significance of Infrared Technology 1; 1-2. Historical Development of Infrared Applications 3; 1-3. Infrared Physics and Engineering 6; 1-4. Procedure in Development of an Infrared System 7; 1-5. The Detector System Design 9; REFERENCES 11	
2. Origin and Characteristics of Infrared Radiation	12
THE INFRARED REGION OF THE ELECTROMAGNETIC SPECTRUM 12; THERMAL EMISSION OF SOLIDS 13; 2-1. Radiant Emissivity 14; 2-2. Planck's Blackbody Law 16; LINE EMISSION FROM GASES 28; 2-3. Diatomic Molecules 28; 2-4. Polyatomic Molecules 31; 2-5. Spectral-line Shape 32; INFRARED AND OPTICAL MASERS 37; SYMBOLS 40; REFERENCES 42	
3. Transmission of Infrared Radiation through the Atmosphere	43
METEOROLOGICAL FACTORS 44; ABSORPTION BY ATMOSPHERIC GASES 47; 3-1. Absorption by a Single Spectral Line 49; 3-2. Absorption by a Band 56; 3-3. Absorption by Water Vapor and Carbon Dioxide 63; ABSORPTION ALONG SLANT PATHS 88; SCATTERING OF INFRARED RADIATION 97; SYMBOLS 99; REFERENCES 100	
4. Backgrounds and Targets	102
BACKGROUNDS 102; 4-1. Clear-sky Radiance above 3μ 104; 4-2. Cloud Radiance above 3μ 108; 4-3. Scattered Radiation 109; 4-4. Overcast Sky 110; 4-5. Radiance as Observed from a Satellite 111; 4-6. Celestial Background 114; 4-7. Ground Radiances 116; 4-8. Ocean Radiances 119; TARGETS 119; 4-9. Ground Targets 120; 4-10. Airborne Targets 120; REFERENCES 122	
5. Infrared Radiation Detectors	123
PHYSICAL MECHANISMS OF INFRARED DETECTORS 123; 5-1. Thermal Types 124; 5-2. Photon Detectors 131; PERFORMANCE DESCRIPTION OF INFRARED DETECTORS 140; 5-3. Operating Conditions 141; 5-4. Particular Description 143; 5-5. Reference Description 149; 5-6. Ultimate Detection Limit 152; CHARACTERISTICS OF OPERATIONAL DETECTORS 157; 5-7. Production Detectors 157; 5-8. Developmental Detectors 175; DETECTOR COOLING DEVICES 181; 5-9. Thermoelectric Cooler 182; 5-10. Liquid-transfer Cooler 182; 5-11. Joule-Thomson Cooler 184; 5-12. Heat-engine Cooler 185; SYMBOLS 187; REFERENCES 189	

6. Infrared Optical Systems	192
OPTICAL PRINCIPLES 192; 6-1. The Lens Laws 193; 6-2. Limiting Apertures, or Stops 197; 6-3. Image Irradiation 198; 6-4. Optical Gain 201; OPTICAL IMAGERY 203; 6-5. Aberrations 204; 6-6. General Approximations 210; 6-7. Diffraction Limit 212; OPTICAL ARRANGEMENTS 216; 6-8. Refracting Optics 216; 6-9. Reflecting Optics 219; 6-10. Catadioptric Optics 222; 6-11. Field Optics 226; 6-12. Auxiliary Optics 229; SYMBOLS 231; REFERENCES 233	
7. Infrared Optical Materials	234
INFRARED RADIATION IN OPTICAL MEDIA 234; 7-1. Transmission of Radiation in Solids 234; 7-2. Absorption, Polarization, and Dispersion 237; 7-3. Reflection and Refraction at Interfaces 240; 7-4. Antireflection Coating 244; OPTICAL MATERIALS AND PROPERTIES 247; 7-5. Infrared Glasses 250; 7-6. Oxides and Titanates 256; 7-7. Semiconducting Elements 261; 7-8. Chalconides 265; 7-9. Intermetallic Compounds 267; 7-10. Halides 267; 7-11. Other Materials 271; 7-12. Reflective Metal Coatings 272; INFRARED FILTERS 274; 7-13. Interference Filters 275; 7-14. All-dielectric Interference Filters 277; 7-15. Materials and Deposition of Interference Filters 281; SYMBOLS 284; REFERENCES 286	
8. Applied Probability Theory	290
PROBABILITY THEORY OF EVENTS 290; 8-1. Definitions and Axioms 290; 8-2. Probability Distributions 293; 8-3. Characteristic Functions 299; 8-4. The Binomial Distribution and Approximations 301; RANDOM PROCESSES 306; 8-5. Classification of Random Processes 307; STATISTICAL DECISION THEORY 309; 8-6. Decision Problems 309; 8-7. Utility Functions 313; 8-8. Decision Criteria 315; SYMBOLS 322; REFERENCES 323	
9. Operations Analysis	324
DEFINITIONS 324; 9-1. Operations Analysis, Operations Research, and Systems Analysis 324; 9-2. Nature of Operations-analysis Studies 326; TECHNIQUES OF OPERATIONS ANALYSIS 331; 9-3. Statistical Inference 331; 9-4. Reliability 336; 9-5. Competitive Analysis 343; 9-6. Graphical Analysis 347; PLANNING OPERATIONS-ANALYSIS STUDIES 351; 9-7. Problem Formulation 351; 9-8. Measures of Effectiveness 353; 9-9. Model Construction and Solution 354; 9-10. Sensitivity Analysis 355; SYMBOLS 355; REFERENCES 356	
10. Random Fluctuations	357
NOISE STATISTICS 357; 10-1. The Nature and Significance of Noise 357; 10-2. Characteristics of Random Noise 358; 10-3. Bandwidth and Noise Spectral Density 360; 10-4. Correlation 362; 10-5. Spectral Density and Correlation 366; PHYSICAL ORIGINS OF NOISE 370; 10-6. Brownian Motion 370; 10-7. Nyquist Noise 372; 10-8. Temperature Noise 374; 10-9. Shot Noise 376; 10-10. Fluctuations in a Stream of Photons 381; 10-11. Photon Generation-Recombination Noise 384; 10-12. Generation-Recombination Noise 391; 10-13. Other	

Sources of Noise 394; NOISE MEASUREMENTS 397; 10-14. Noise-measuring Technique 397; 10-15. Noise in a Photovoltaic Indium Antimonide Detector 400; 10-16. Noise in an Uncooled Lead Sulfide Detector 402; SYMBOLS 407; REFERENCES 409	
11. The Electronics of Small Signals	412
LINEAR PROCESSING 413; 11-1. Noise Figure 413; 11-2. Detector Bias Networks 415; 11-3. Transistor Preamplifiers 420; 11-4. Tube Preamplifiers 428; 11-5. Summary of Tube and Transistor Noise Figures 438; 11-6. Choice of a Preamplifier 438; 11-7. Construction of Preamplifiers 443; 11-8. Electronic Filtering 445; 11-9. Filtering for Detection 446; 11-10. A Simple Filter 451; 11-11. Filtering for Reproduction 457; 11-12. Filter for a Scanning Camera 461; NON-LINEAR PROCESSING 464; 11-13. Square-law Diode 466; 11-14. Signal-to-Noise Ratios 472; SYMBOLS 478; REFERENCES 482	
12. Space Filtering	485
12-1. The Use of Reticles 487; 12-2. Space-filtering Coordinates 489; 12-3. Aberrations, Linearity, and Superposition 491; 12-4. Aperture Functions 493; 12-5. Motion of the Reticle 497; 12-6. Reticle Transforms by Superposition 499; STATISTICAL DESCRIPTION OF RANDOM FUNCTIONS 502; 12-7. Optical Autocorrelation 506; 12-8. The Wiener Spectrum of a Random Image Process 510; 12-9. Analog Wiener Transformation 514; 12-10. Foreshortening and Altitude 515; 12-11. Space-filtering Analysis 516; 12-12. Optimum Space Filtering 524; 12-13. Measurement of Wiener Spectra 526; LIMITATIONS OF WIENER SPECTRA 528; 12-14. Truncation of Higher Moments of the Probability Distribution 530; 12-15. Non-Markov Nature of Random Processes in Two Dimensions 531; SYMBOLS 533; REFERENCES 536	
13. Hypothesis Testing and Information Theory	538
SYSTEMS ANALYSIS 538; HYPOTHESIS TESTING AND SYSTEMS DESIGN 539; 13-1. Correlation, Synchronous Detection, Matched Filters 540; 13-2. Receiver Operating Characteristics 543; 13-3. Decision at High Thresholds 548; 13-4. Experiments with Thresholds 552; 13-5. Unknown Signal Parameters 553; 13-6. Signal Shape 554; SUMMARY OF INFORMATION THEORY 557; 13-7. Information Sources and Entropy 558; 13-8. Information Channels, Rate, and Capacity 559; 13-9. Coding 561; 13-10. Continuous Sources and Channels 564; 13-11. The Entropy of Optical Message Sources 568; 13-12. Capacity of a Continuous Channel 570; APPLICATIONS OF INFORMATION THEORY 575; 13-13. The Channel Capacity of an Infrared Detector 575; 13-14. Information Theory and Tracker Accuracy 579; 13-15. Spectral Information 588; SYMBOLS 590; REFERENCES 594	
14. Infrared Systems	596
CLASSIFICATION 596; 14-1. Functional Classification 596; 14-2. Scanning Classification 598; 14-3. Processing Classification 599; GENERAL PERFORMANCE EQUATIONS 600; 14-4. Detector Noise-limited Systems 601; 14-5. Background Noise-limited Systems 608; 14-6. Electronic	

Noise-limited Systems 611; SPECIFIC PERFORMANCE EQUATIONS 612; 14-7. Radiometer 612; 14-8. Search System 615; 14-9. Tracking System 617; 14-10. Image-forming System 620; 14-11. Communication System 622; 14-12. Range-measurement System 626; SUMMARY OF DETECTION-SYSTEM EQUATIONS 631; SYMBOLS 633; REFERENCES 637	
Appendix A. Wiener Transforms	639
A-1. Convolution 639; A-2. Wiener Transforms 641; A-3. Properties of Wiener Transforms 644; SYMBOLS 650; REFERENCES 651	
Appendix B. Equivalent Bandpass	652
SYMBOLS 653; REFERENCE 654
