Contents

Foreword ..... **xi**

Introduction **1**

Chapter 1 Atomic Inner-Shell X-Ray Spectra and X-Ray Spectrometers **11**
1.1 X-ray spectra 11
1.2 X-ray spectroscopy 16

Chapter 2 Characteristic and Continuous X-Ray Spectra Induced by MeV Ion Beams **22**
2.1 The projectile–target interaction 22
2.2 The calculation of ionization cross-sections 25
2.3 Numerical values of cross-sections for ionization and X-ray production by protons 28
2.4 Exotic ionization processes 32
2.5 Comparison of experimental and theoretical backgrounds 33
2.6 Nuclear reaction background 36
2.7 Detection limits 39

Chapter 3 Beam-Handling and Specimen Chamber Design for PIXE in Vacuum **41**
3.1 Introduction 41
3.2 Preparation of a uniform beam 41
3.3 Instrumentation of the specimen chamber 47
3.4 Measurement of beam charge 52
3.5 Sensitivity and background 58
3.6 Efficiency of the Si(Li) detector 58

Chapter 4 Thin Specimens: Preparation, Basic Formalism and Detection Limits **62**
4.1 Introduction 62
4.2 External and internal standards and the thin specimen yield curve 64
4.3 Backings for thin specimens 67

4.4 Detection limit estimates for thin specimens 72
4.5 Preparation of thin specimens 77
4.6 Other standardization methods for thin specimens 80

Chapter 5 Analysis of Specimens of Intermediate Thickness 85
5.1 Introduction 85
5.2 An expression for correction of measured X-ray yields 85
5.3 Determination of specimen thickness 87
5.4 A direct scheme for matrix correction 90
5.5 Accuracy and precision in thin specimen PIXE 92

Chapter 6 Analysis of Thick Specimens 96
6.1 Areas of application 96
6.2 Formalism and data base 97
6.3 Methods of calibration for trace or minor element analysis 103
6.4 Analysis for major element concentrations 106
6.5 Charge measurement 107
6.6 Accuracy and precision 107
6.7 Limits of detection 110

Chapter 7 Non-Vacuum PIXE 116
7.1 Motivation for non-vacuum analysis 116
7.2 Technology 116
7.3 Standardization 119
7.4 Limits of detection 120
7.5 Some applications 121

Chapter 8 Further Aspects of Si(Li) Spectroscopy in the Context of PIXE 123
8.1 Preliminaries 123
8.2 Calibration of energy and peak width 123
8.3 Peak shape 124
8.4 Representation of the spectrum for a single element 130
8.5 The silicon K escape peak 133
8.6 Pile-up 134
8.7 Dead time corrections 140
8.8 Detector efficiency 141

Chapter 9 Analytic Fitting of PIXE Spectra 144
9.1 General considerations 144
9.2 The model pulse-height spectrum 146
9.3 The background continuum 147
9.4 Least-squares fitting 148
9.5 Background removal by digital filtering 152
9.6 Practical applications 154

Chapter 10 Further Aspects of Thick Specimen Analysis **160**
10.1 Surface structure 160
10.2 Secondary fluorescence 161
10.3 Critical absorbers in thick target PIXE 168
10.4 Complementary aspects of TTPIXE, PIGE and EPMA..... 170
10.5 The effective sampling depth in thick specimens 172
10.6 Depth profiling in thick specimens..... 172
10.7 Measurement of layers on substrates..... 173

Chapter 11 Biological and Medical Applications **177**
11.1 Introduction 177
11.2 Sampling..... 178
11.3 The applicability of PIXE in the biomedical field..... 179
11.4 Sample preparation 180
11.5 Applications 182

Chapter 12 Atmospheric Applications..... **200**
12.1 Introduction 200
12.2 Sampling techniques 202
12.3 Sampling strategies..... 207
12.4 Analysis 211
12.5 Applications 215

Chapter 13 Applications in Geoscience **229**
13.1 Introduction 229
13.2 Comparison with other methods 231
13.3 Analytical techniques..... 233
13.4 Applications..... 236

Chapter 14 Applications in art and archaeology..... **243**
14.1 Introduction 243
14.2 The use of PIXE in art and archaeology 243
14.3 Analytical problems 244
14.4 Applications..... 247

Chapter 15 Miscellaneous applications..... **257**
15.1 Water analysis 257
15.2 Forensic science 261
15.3 Industrial applications 264

Chapter 16 Micro-PIXE **272**
16.1 Introduction 272
16.2 Beam focusing 274
16.3 Specimen chamber..... 281
16.4 Data acquisition and presentation 283

16.5 Spatial resolution 286
16.6 Sensitivity 287
16.7 Specimen preparation 288
16.8 Collimated beams 291
16.9 Applications 292

Chapter 17 Comparison With Other Methods **311**

Chapter 18 Future Prospects **318**

Appendix Numerical data **323**

Index **343**
