

CONTENTS

<i>Preface</i>	5
<i>Introduction</i>	9
General remarks on observed spectra	9
Chapter 1	
<i>Foundations of a theory of diatomic molecules</i>	13
1.1. Wave equation and its approximate solution	14
1.2. Interactions of the electron spin	25
1.3. Matrix elements arising from the terms neglected on the separation of the wave equation	39
1.4. Perturbation matrix of the centrifugal term	45
1.5. Perturbation calculation	48
Chapter 2	
<i>Multiplet term formulas</i>	53
2.1. Spin multiplets and Λ -type doubling	54
2.1.1. Energies and perturbation-matrix elements in the limiting cases	54
2.1.2. Singlet terms	57
2.1.3. Doublet terms	60
2.1.4. Triplet terms	68
2.1.5. Quartet terms	80
2.1.6. Quintet terms	92
2.1.7. Sextet terms	95
2.1.8. Septet terms	98
2.2. L -multiplets	102
2.2.1. Energies and perturbation-matrix elements in the limiting cases	103
2.2.2. p -term complex	105
2.2.3. d -term complex	108
Chapter 3	
<i>Intensity distribution in rotational bands</i>	115
3.1. General remarks	115
3.2. Intensity distribution among spin multiplets of the same multiplicity	121
3.2.1. Singlet transitions	122
3.2.2. Doublet transitions	125
3.2.3. Triplet transitions	131
3.2.4. Quartet transitions	143
3.2.5. Quintet transitions	150
3.2.6. Sextet transitions	154
3.2.7. Septet transitions	162

3.3. Intensity distribution among spin multiplets of different multiplicity	175
3.3.1. Singlet-triplet transitions	176
3.3.2. Doublet-quartet transitions	182
3.4. Intensity distribution for L -multiplets	191
3.4.1. p -term complex transitions	192
3.4.2. d -term complex transitions	193
Chapter 4	
<i>Perturbations in the spectra</i>	199
4.1. General theory of perturbations	200
4.1.1. Perturbation of two discrete states	205
4.1.2. Perturbation of three discrete states	209
4.1.3. Perturbation of a discrete and a continuous state; predissociation	213
4.1.4. Perturbation of two discrete and a continuous state; accidental predissociation	218
4.2. Perturbations among states of the same multiplicity	224
4.2.1. Homogeneous perturbations	225
4.2.2. Heterogeneous perturbations	253
4.3. Perturbations among states of different multiplicity	266
4.3.1. Singlet-triplet perturbations	266
4.3.2. Doublet-quartet perturbations	274
4.4. Methods for the determination of the constants of perturbing molecular terms	287
4.4.1. The $B'-B''$ -method	287
4.4.2. The ν_0 -method	296
