

## **Contents**

### **CHAPTER 1**

#### **SPECTROMETRY BETWEEN 3 CM<sup>-1</sup> AND 200 CM<sup>-1</sup>**

*by D. H. MARTIN*

1. Introduction . . . . .	3
2. Optical considerations in assessing a spectrometric method . . . . .	10
3. Choice of spectrometric method . . . . .	20
4. Submillimetre lasers . . . . .	26
5. Availability of instruments and components . . . . .	28
References . . . . .	31

### **CHAPTER 2**

#### **FOURIER TRANSFORM SPECTROSCOPY**

*by P. L. RICHARDS*

1. Introduction . . . . .	33
2. Theory . . . . .	34
3. Advantages of Fourier transform spectroscopy . . . . .	40
4. Methods of Fourier transformation . . . . .	41
5. Types of interferometer . . . . .	57
6. Performances of interferometers and conclusion . . . . .	63
References . . . . .	66

### **CHAPTER 3**

#### **GRATING SPECTROSCOPY**

*by G. R. WILKINSON and D. H. MARTIN*

1. Introduction . . . . .	69
2. Sources . . . . .	69
3. Monochromators . . . . .	71
4. Detection and recording . . . . .	87
5. Sampling techniques . . . . .	89
6. Spectrometers . . . . .	93
7. Assessment of performance including calibration . . . . .	100
References . . . . .	108

## CHAPTER 4

## DETECTORS

*by E. H. PUTLEY and D. H. MARTIN*

1. Introduction . . . . .	113
2. The performance of an ideal detector . . . . .	113
3. Point-contact detectors . . . . .	117
4. Photoconductive detectors . . . . .	119
5. Thermal detectors . . . . .	126
6. Amplifiers for use with detectors . . . . .	131
7. Comparison and summary of the performances of detectors . . . . .	142
8. Recently reported work . . . . .	149
Acknowledgements . . . . .	150
References . . . . .	150

## CHAPTER 5

## HARMONIC GENERATORS AND SEMICONDUCTOR DETECTORS

*by J. G. BAKER*

Introduction . . . . .	155
1. Properties of semiconductor junctions . . . . .	157
2. Rectifier diode harmonic generators . . . . .	168
3. Semiconductor detectors . . . . .	201
4. Charge storage diodes and ferrites . . . . .	229
5. Semiconductor diode oscillators . . . . .	245
6. The plasma arc harmonic generator . . . . .	249
Conclusion . . . . .	256
Acknowledgements . . . . .	258
References . . . . .	259

## CHAPTER 6

## COHERENT SOURCES USING ELECTRON BEAMS

*by P. N. ROBSON*

1. Introduction . . . . .	263
2. Progress in the coherent generation of millimetre and submillimetre waves . . . . .	264
3. Klystron oscillators . . . . .	266
4. Travelling wave interactions . . . . .	278
5. The backward wave oscillator . . . . .	283
6. The cavity magnetron as a source of short millimetre waves . . . . .	298
7. Harmonic generators using relativistic electron beams . . . . .	299
8. A coherent source of millimetre and submillimetre cyclotron radiation . . . . .	303
References . . . . .	305

## CHAPTER 7

TECHNIQUES OF PROPAGATION AT MILLIMETRE AND  
SUBMILLIMETRE WAVELENGTHS*by D. J. KROON and J. M. VAN NIEUWLAND*

1. Introduction . . . . .	311
2. Summary of relevant electromagnetic theory . . . . .	312
3. Standard waveguides . . . . .	321
4. Oversized waveguides . . . . .	325
5. H-Guides . . . . .	334
6. Dielectric rod guides . . . . .	343
7. Beam guides . . . . .	356
8. Components used in conjunction with guides . . . . .	363
9. Closing remarks . . . . .	377
References . . . . .	379
AUTHOR INDEX . . . . .	381
SUBJECT INDEX . . . . .	386
