

Contents

1. Thermal Equilibrium and Detailed Balance	1
1.1 Introductory Remarks	1
1.2 The Principle of Detailed Balance	2
1.3 Proof of the Principle of Detailed Balance for a Special Case ...	4
1.4 Derivation of Thermal Distribution Functions from Detailed Balance	9
1.4.1 Maxwell Distribution	10
1.4.2 Boltzmann Distribution	12
1.4.3 Saha Distribution	13
1.4.4 Planck Distribution	15
1.5 Validity of the Reciprocity Relation $w(i \rightarrow f) = w(f \rightarrow i)$	18
1.6 Explicit Forms of the Reciprocity Relation $w(i \rightarrow f) = w(f \rightarrow i)$..	22
1.6.1 Collisional Excitation and De-Excitation	23
1.6.2 Collisional Ionization and Three-Body Recombination ..	25
1.6.3 Autoionization and Radiationless Capture	27
1.6.4 Line Emission and Absorption	28
1.6.5 Photoionization and Radiative Recombination	30
1.6.6 Free-Free Emission and Absorption	31
1.6.7 Two-Photon Emission and Absorption	32
2. Kinetic Equations of Particles	35
2.1 Kinetic Equations	35
2.2 Elastic Collision Terms	38
2.2.1 Boltzmann Collision Terms	39
2.2.2 Fokker-Planck Collision Terms	40
2.2.3 General Properties of Elastic Collision Terms	42
2.3 Inelastic Collision Terms	43
2.3.1 Collisional Excitation and De-Excitation (Atoms)	44
2.3.2 Collisional Ionization and Three-Body Recombination (Atoms)	46
2.3.3 Collisional Excitation and De-Excitation (Electrons)	47
2.3.4 Collisional Ionization and Three-Body Recombination (Electrons)	49
2.3.5 Dielectronic Recombination	51
2.4 Collision Terms Due to Radiative Processes	53
2.4.1 Line Emission and Absorption	55

2.4.2 Photoionization and Radiative Recombination (Atoms) .	57
2.4.3 Photoionization and Radiative Recombination (Electrons)	59
2.4.4 Bremsstrahlung and Inverse Bremsstrahlung (Electrons) .	61
3. The Kinetic Equation of Photons	66
3.1 The Equation of Radiative Transfer	66
3.2 Emission and Absorption	71
3.2.1 Bound-Bound Transitions	72
3.2.2 Free-Bound Transitions	74
3.2.3 Free-Free Transitions	77
3.3 Scattering	78
3.3.1 Scattering by Stationary Particles	80
3.3.2 Scattering by Moving Particles	82
4. Moment Equations and Fluid Description	87
4.1. Moment Equations for Particles	87
4.1.1 One Particle Type a	88
4.1.2 One Particle Species A	93
4.1.3 Several Particle Species	95
4.2 Moment Equations for Photons	100
4.3 Fluid Description of a Gas	102
4.4 Fluid Description of a Gas with Radiative Interactions	107
4.4.1 Preliminary Discussion	108
4.4.2 Covariant Form of the Transfer Equation and the Energy-Momentum Tensor of the Radiation Field	112
4.4.3 Radiation Pressure, Radiative Heat Conductivity, Radiative Viscosity	117
4.4.4 Hydrodynamic Equations with Radiative Terms	122
5. H Theorem for Gases and Radiation	127
5.1 Entropy and Entropy Production	127
5.1.1 General Definitions	127
5.1.2 Entropy of a Classical Gas	131
5.1.3 Entropy of Radiation	133
5.2 Proof of the H Theorem	136
5.2.1 Elastic Collisions (Identical Particles)	139
5.2.2 Elastic Collisions (Unlike Particles)	144
5.2.3 Emission and Absorption	146
6. Energy Exchange Between Matter and Radiation	149
6.1 General Remarks	149
6.2 Optically Thin Plasmas	151
6.2.1 Physical Reactions	151
6.2.2 Some Illustrative Results	157
6.3 Non-LTE Line Transfer by Two-Level Atoms (I): Basic Relations	164

6.3.1 Kinetic Equation of Photons	165
6.3.2 Kinetic Equations of Two-Level Atoms	166
6.3.3 Approximations	168
6.3.4 Line Profile Coefficients	173
6.3.5 Redistribution Functions	181
6.3.6 Stimulated Emission	186
6.4 Non-LTE Line Transfer by Two-Level Atoms (II): Results	192
6.4.1 The Standard Problem	192
6.4.2 Dimensionless Quantities	194
6.4.3 Boundary Conditions	199
6.4.4 Complete Redistribution: Static Approximation	200
6.4.5 Complete Redistribution: Diffusion Approximation	205
6.4.6 Exact Solutions	207
6.5 Multilevel Atoms	216
6.5.1 Atomic Line Profile Coefficients of a Three-Level Atom ..	218
6.5.2 Laboratory Line Profile Coefficients of a Three-Level Atom	224
6.6 Non-Maxwellian Electron Distribution Functions	231
7. Momentum Exchange Between Matter and Radiation	240
7.1 General Remarks	240
7.2 Approach to Thermal Equilibrium Through Interaction with Blackbody Radiation	241
7.2.1 Line Radiation of Two-Level Atoms	244
7.2.2 Thomson Scattering of Electrons	247
7.3 Radiative Forces	250
7.3.1 Scattering	252
7.3.2 Bound-Bound Transitions	254
7.3.3 Free-Bound Transitions	256
7.4 Compton Scattering	261
7.4.1 Kinematics of Compton Scattering	261
7.4.2 Reciprocity Relation	264
7.4.3 Compton Collision Term (Electrons)	265
7.4.4 Compton Collision Term (Photons)	266
7.4.5 Transformation of Cross Sections	268
Appendices	274
A. Transformation Formulas for Radiative Quantities	274
A.1 Transformation Formulas	274
A.2 Is the Distribution Function a Relativistic Invariant?	280
B. Atomic Absorption and Emission Profiles	284
B.1 Definitions and General Remarks	284
B.2 Two-Level Atom (I): One Level Broadened	289
B.3 Two-Level Atom (II): Two Levels Broadened	297
B.4 Three-Level Atom	302

B.5 Atomic Redistribution Functions	305
B.6 Absorption and Emission Profiles in Terms of Generalized Redistribution Functions	310
C. The Boltzmann Equation	322
D. Brownian Motion and Fokker-Planck Equation	327
D.1 Brownian Motion	327
D.2 Fokker-Planck Equation	331
E. Reciprocity Relations for Inelastic Collisions with Heavy Particles ..	333
E.1 Excitation and De-Excitation	333
E.2 Ionization and Three-Body Recombination, Dissociation and Recombination	335
F. Elastic Collision Term of the Standard Problem	338
General Bibliography	345
References	346
Subject Index	351
