

Contents of Part B

Contents of Part A	xiii
Introduction by <i>W. Hanle and H. Kleinpoppen</i>	xxi

Chapter 16

The Spectroscopy of Highly Excited Atoms

Daniel Kleppner

1. Introduction	713
2. Experimental Methods	714
3. Field Ionization	717
4. Two-Electron Systems	721
<i>References</i>	724

Chapter 17

Optical Spectroscopy of Short-Lived Isotopes

H.-Jürgen Kluge

1. Introduction	727
2. Information on Nuclear Properties of Short-Lived Isotopes from hfs and IS	728
2.1. Hyperfine Structure	728
2.2. Isotope Shift	729
3. Nuclear-Radiation-Detected Optical Pumping of Short-Lived Isotopes (RADOP)	730
3.1. The Method	731
3.2. In-Beam Experiments on Alkali Isotopes	741
3.3. RADOP Experiments on Mass-Separated Alkali Isotopes	744
3.4. RADOP Experiments on Mass-Separated Hg Isotopes	747
4. Laser Spectroscopy on Short-Lived Isotopes	750
4.1. On-Line Laser Spectroscopy of Na Isotopes	751
4.2. On-Line Laser Spectroscopy of Hg Isotopes	753
5. Discussion	760
<i>References</i>	765

Chapter 18

Spin and Coherence Transfer in Penning Ionization

L. D. Schearer and W. F. Parks

1. Introduction	769
2. Spin Transfer	769

3. Experimental Conditions for Observing Spin Transfer	770
4. Coherence Transfer in Penning Collisions: Hanle Signals in a Rotating Reference Frame	773
5. Experimental Observations of Coherence Transfer	774
<i>References</i>	775

Chapter 19

Multiphoton Spectroscopy

Peter Bräunlich

1. Introduction	777
2. Transition Probabilities for Multiphoton Processes	779
2.1. Time-Dependent Perturbation Theory	779
2.2. Calculation of Multiphoton Cross Sections	787
3. Experimental Investigation of Multiphoton Transition Probabilities	790
3.1. Photon Statistics	790
3.2. Measurements of Multiphoton Cross Sections	792
4. Survey of Multiphoton Emission Phenomena	796
4.1. Stimulated Two-Photon Emission and Raman Scattering	797
4.2. Optical Mixing	799
5. Resonance Effects	802
6. Polarization Effects	804
7. High-Resolution Multiphoton Spectroscopy	808
7.1. Multiphoton Ionization Spectroscopy	808
7.2. Doppler-Free Spectroscopy	810
7.3. Applications of Two-Photon Doppler-Free Spectroscopy	816
8. Concluding Remarks	821
<i>References</i>	822

Chapter 20

Fast-Beam (Beam-Foil) Spectroscopy

H. J. Andrä

1. Introduction	829
2. The Fast-Beam Spectroscopic Source	833
2.1. Basic Principle	833
2.2. Ion-Beam-Target Interaction	836
2.3. Experimental Equipment and Procedures	841
2.4. Specific Features of Fast-Beam Spectroscopy	858
3. Levels and Lifetimes	859
3.1. Rydberg Levels	861
3.2. Multiply Excited Terms by Photon Detection	863
3.3. Multiply Excited Terms by Electron Detection	869
3.4. Metastable Levels in H- and He-like Ions	875
3.5. Lamb Shift in High-Z Ions	883
3.6. Regularities of Oscillator Strengths	885
4. Coherence, Alignment, Orientation: “Doppler-Free” Methods	889
4.1. Quantum Interference—An Introduction	889

4.2. Stark Beats	893
4.3. Excitation Symmetry: Foils, Tilted Foils, Inclined Surfaces	896
4.4. Zeeman Beats and Hanle Effect	907
4.5. Zero-Field Quantum Beats	912
4.6. High-Field Level Crossing	921
4.7. Fast-Beam rf Experiments	923
5. Selective Laser Excitation	923
5.1. Precision Lifetimes	923
5.2. Quantum Beats	933
5.3. High-Resolution Fluorescence Spectroscopy	936
<i>References and Notes</i>	942

Chapter 21

Stark Effect

K. J. Kollath and M. C. Standage

1. Introduction	955
2. Theory	957
2.1. Stark Effect of Hydrogen	959
2.2. Stark Effect for Nonhydrogenic Atoms	967
3. Experimental Methods	972
3.1. Level Crossings	973
3.2. Level Anticrossings	980
3.3. The Pulsed-Field Method	982
3.4. Atomic-Beam Experiments	985
3.5. Maser and Laser Stark-Effect Experiments	989
3.6. Summary	993
<i>References</i>	995

Chapter 22

Stored Ion Spectroscopy

Hans A. Schuessler

1. Introduction	999
2. The Containment of Isolated Ions	1000
2.1. The Trap Geometry	1000
2.2. Description of the Ion Motion	1003
2.3. Measurement of the Ion Number Signal	1006
3. Reorientation Spectroscopy of Stored Ions	1007
3.1. The Ion Storage Exchange Collision Method	1007
3.2. State Selection by Selective Quenching of Stored Ions	1015
3.3. Optical Pumping and Laser Spectroscopy of Stored Ions	1015
3.4. Alignment of Ions by Selective Photodissociation	1016
4. Limitations of Stored Ion Spectroscopy	1017
4.1. Line Shifts and Widths of Resonances of Stored Ions	1017
4.2. Pulsed Spin Precession Reorientation Method	1020
4.3. Motional Sideband Spectra	1021

5. Some Results of Precision Measurements of Stored Ions	1024
6. Conclusion	1027
<i>References</i>	1028

*Chapter 23***The Spectroscopy of Atomic Compound States***J. F. Williams*

1. Introduction	1031
2. Experimental Considerations	1035
3. Interpretation of Spectra	1038
3.1. Threshold Spectra	1038
3.2. Line Profiles	1038
3.3. Line Series	1043
4. Atomic Data	1044
4.1. Atomic Hydrogen	1044
4.2. Inert Gas Atoms	1047
4.3. Alkali Atoms	1062
4.4. Atomic Oxygen	1066
4.5. Mercury	1069
<i>References</i>	1069

*Chapter 24***Optical Oscillator Strengths by Electron Impact Spectroscopy***W. R. Newell*

1. Introduction	1075
2. Apparatus	1076
3. Theory	1078
4. Normalization Procedures	1083
5. Validity of the Born Approximation	1085
6. Extrapolation Procedure	1085
7. Summary of Results for Discrete Transitions	1086
8. The Bethe Surface	1091
9. Continuum Distribution of Oscillator Strength	1094
10. Conclusion	1097
<i>References</i>	1097

*Chapter 25***Atomic Transition Probabilities and Lifetimes***W. L. Wiese*

1. Introduction	1101
2. Basic Concepts	1104
3. Transition Probability Measurements	1106
3.1. The Emission Technique	1106

3.2. The Absorption Technique	1115
3.3. The Anomalous Dispersion or “Hook” Technique	1120
4. Transition Probability Calculations	1122
4.1. Advanced Calculations	1122
4.2. Error Bounds	1124
4.3. Relativistic Effects	1126
4.4. High-Volume Calculations	1127
5. Regularities in Atomic Oscillator Strengths	1129
5.1. Systematic Trend of a Given Transition Along an Isoelectronic Sequence	1129
5.2. Homologous Atoms	1131
5.3. Regularities in Spectral Series	1132
5.4. Oscillator Strength Distributions in Spectral Series Along Isoelectronic Sequences	1133
6. Lifetimes of Excited Atomic States	1135
6.1. General Remarks	1135
6.2. The Cascading Problem	1136
6.3. Advances in Lifetime Techniques	1143
7. Forbidden Transitions	1147
References	1149

Chapter 26

Lifetime Measurement by Temporal Transients

Richard G. Fowler

1. Introduction	1157
2. Excitation Methods	1157
3. Observation Methods	1160
4. Data Interpretation	1166
5. Data Processing	1174
6. Results	1177
References	1185

Chapter 27

Line Shapes

W. Behmenburg

1. Introduction	1187
2. Experimental Methods	1188
2.1. Influence of Instrumental Effects	1188
2.2. Doppler-Limited Spectroscopy	1189
2.3. Doppler-Free Spectroscopy	1192
3. Atomic Interactions	1194
3.1. Line Center	1196
3.2. Line Wings	1205
3.3. Satellites	1210
3.4. High-Pressure Effects	1215
3.5. Collisional Line Broadening and Depolarization	1217

4. Interaction with Strong Radiation Fields	1218
4.1. Power Broadening	1219
4.2. Line Splitting: Linear Stark Effect	1219
4.3. Line Shift: Quadratic Stark Effect	1222
References	1224

Chapter 28

Collisional Depolarization in the Excited State

W. E. Baylis

1. Introduction: Purpose and Scope	1227
2. Characterizing the Excited State	1228
2.1. Polarization and Multipoles	1228
2.2. Liouville Space and the Density Matrix ρ	1231
2.3. Time Evolution of ρ Due to Radiation and Collisions	1233
2.4. Effect of External Fields	1237
2.5. Excited-State Coherence	1239
2.6. When Can Coherence Be Neglected?	1240
2.7. Making and Monitoring the Multipoles	1241
3. Relaxation Matrix γ	1244
3.1. Multipole Relaxation Rates γ_L	1244
3.2. m_j Mixing Rates	1245
3.3. Symmetries and Selection Rules	1248
3.4. Calculations of γ	1252
3.5. Magnetic Field Dependence	1261
3.6. Complications of Nuclear Spin	1263
4. Experimental Methods	1265
4.1. Traditional Measurements in Fluorescence Cells and Flames	1265
4.2. Radiation Trapping and Other Problems	1267
4.3. Broadening of Hanle, Level-Crossing, and Double-Resonance Signals	1271
4.4. Time-Resolved Measurements; Delayed Coincidence	1273
4.5. D_2 Optical Pumping	1274
4.6. Isolating the Zeeman Sublevels; High-Field Measurements	1276
4.7. Atomic-Beam Measurements	1277
4.8. Laser Methods of Investigating Depolarization	1278
5. Comparison of Results	1279
5.1. Alkali Depolarization in Collisions with Noble Gases	1279
5.2. Other Depolarization in Foreign-Gas Collisions	1289
5.3. Depolarization in Resonant Collisions	1291
References	1291

Chapter 29

Energy and Polarization Transfer

M. Elbel

1. Introduction: Transfer of Energy and Polarization	1299
2. Transfer of Energy	1299
2.1. Experimental	1299
2.2. Energy Transfer in Collisions of Alkali Atoms with Inert Gas Atoms	1301

2.3. Energy Transfer in Collisions between Similar and Dissimilar Alkali Atoms	1308
2.4. Energy Transfer in Collisions of Other Dissimilar Atoms	1314
3. Transfer of Alignment and Orientation	1317
3.1. Gough's Prediction	1320
3.2. Alignment and Orientation Transfer in Collisions of the Second Kind	1324
3.3. Chéron's Analysis of Collisional Transfer	1327
3.4. Transfer between Isotopes of the Same Element	1333
3.5. Hanle Signals in Sensitized Fluorescence	1340
3.6. Transfer between Hyperfine Sublevels	1341
3.7. Transfer between Fine-Structure Sublevels of the Same Element	1347
<i>References</i>	1352

Chapter 30

X-Ray Spectroscopy

K.-H. Scharfner

1. Introduction	1357
2. Experimental Techniques	1358
2.1. Sources for Ions with Inner-Shell Vacancies	1358
2.2. X-Ray Detectors	1359
3. X-Ray Spectra	1362
3.1. Satellite Spectra Emitted in Heavy-Atom Collisions	1362
3.2. Lifetime Measurements	1368
3.3. Satellite Spectra from Plasmas	1370
3.4. Two-Electron–One-Photon Transitions, Radiative Electron Rearrangement, Radiative Auger Effect	1372
3.5. Continuous X-Ray Spectra	1377
4. Concluding Remarks	1382
<i>References</i>	1383

Chapter 31

Exotic Atoms

G. Backenstoss

1. Introduction	1385
2. Theoretical Background	1389
2.1. Atomic Cascades	1389
2.2. Level Scheme for a Pointlike Nucleus	1390
2.3. Electromagnetic Corrections	1392
2.4. Strong Interaction Effects	1395
3. Experimental Methods	1396
3.1. Generation of the Atoms	1396
3.2. X-Ray Detection	1398
4. Results Obtained from Exotic Atom Data	1401
4.1. Atomic Cascades	1401
4.2. Particle Properties	1406
4.3. Electromagnetic Interactions (Muonic Atoms)	1408
4.4. Strong Interactions—Nuclear Properties	1416
4.5. Outlook	1424
<i>References</i>	1425

*Chapter 32***Positronium Experiments***Stephan Berko, Karl F. Canter, and Allen P. Mills, Jr.*

1. Introduction	1427
2. Annihilation Selection Rules and Positronium Detection Techniques	1428
3. Tests of Charge Conjugation Invariance	1430
4. Methods of Positronium Formation	1430
4.1. Positronium Formation in Gases	1431
4.2. Positronium Formation in Oxide Powders	1432
4.3. Slow Positron Beams	1433
4.4. Positronium Production with Slow Positrons	1434
5. Energy-Level Measurements	1436
5.1. The Fine-Structure Interval of the Positronium Ground State	1436
5.2. The Positronium $n = 2$ State	1441
5.3. Fine-Structure Measurement in the $n = 2$ State	1442
6. Positronium Annihilation Rates	1447
7. Future Developments	1450
<i>References</i>	1450

*Chapter 33***Applications of Atomic Physics to Astrophysical Plasmas***Carole Jordan*

1. Introduction	1453
2. Energy Levels and Line Identifications	1454
2.1. Introduction	1454
2.2. Spectra of Solar Active Regions and Flares	1456
2.3. Other Forbidden Lines	1461
3. Atomic Data for Plasma Diagnostics	1467
3.1. Oscillator Strengths	1467
3.2. Collision Cross Sections	1470
<i>References</i>	1481

*Chapter 34***Wavelength Standards***Kenneth M. Baird*

1. Introduction	1485
2. Sources	1487
3. Measurement Methods	1488
4. The Primary Standard	1491
5. Laser Standards	1493
6. Secondary Standards	1496
<i>References</i>	1499
