

# *Contents of Part D*

Contents of Part A . . . . .	xiii
Contents of Part B . . . . .	xv
Contents of Part C . . . . .	xvii
Introduction by H. J. Beyer and H. Kleinpoppen . . . . .	xix

## *Chapter 1*

### Laser-Microwave Spectroscopy

*R. Neumann, F. Träger, and G. zu Putlitz*

1. Introduction . . . . .	1
1.1. Classical Experiments with Radiofrequency Transitions . . . . .	2
1.2. Lasers versus Classical Light Sources in rf Spectroscopy Experiments . . . . .	6
2. Classification of Laser-Microwave Spectroscopy . . . . .	7
2.1. General Considerations . . . . .	7
2.2. Classification . . . . .	8
2.3. Resume . . . . .	11
3. Measurements Based on Optical Pumping . . . . .	12
3.1. Experiments with Resonance Cells . . . . .	12
3.2. Particle-Beam Techniques . . . . .	17
3.3. Spectroscopy of Trapped Ions . . . . .	26
3.4. Experiments in Solids . . . . .	31
4. Measurements Based on Double Resonance . . . . .	38
4.1. Low-Lying (Short-Lived) Excited States . . . . .	38
4.2. Rydberg States . . . . .	42
5. Measurements Based on Nonlinear Phenomena . . . . .	49
5.1. General Considerations . . . . .	49
5.2. Experiments with Resonance Vessels . . . . .	50
5.3. Particle-Beam Experiments . . . . .	56
6. Other Schemes . . . . .	59
7. Laser-Microwave Heterodyne Techniques for Spectroscopic Purposes . . . . .	61
7.1. Frequency-Offset Locking . . . . .	62
7.2. Laser Light Modulation and Side Band Tuning . . . . .	65
7.3. Various Other Schemes . . . . .	66
8. Concluding Remarks . . . . .	66
References . . . . .	67

*Chapter 2*

## Collinear Fast-Beam Laser Spectroscopy

*R. Neugart*

1. Introduction . . . . .	75
2. Basic Concept and Experimental Realization . . . . .	77
3. Experiments Based on the Doppler Effect . . . . .	81
3.1. Beam Velocity Analysis . . . . .	81
3.2. High-Voltage Measurement and Calibration . . . . .	83
3.3. Relativistic Doppler Shift . . . . .	86
4. Spectroscopic Studies . . . . .	89
4.1. Experimental Details . . . . .	90
4.2. Laser-rf and Related Techniques . . . . .	92
4.3. Nonlinear Spectroscopy . . . . .	94
4.4. Transient Phenomena . . . . .	95
4.5. Spectroscopic Results . . . . .	97
5. Spectroscopy on Unstable Isotopes . . . . .	101
5.1. Hyperfine Structure and Isotope Shifts . . . . .	102
5.2. Review of Experiments . . . . .	106
5.3. Experimental Setup and Procedure . . . . .	106
5.4. Results in Nuclear Physics . . . . .	109
5.5. Higher Sensitivity by Ionization . . . . .	118
5.6. Implantation of Polarized Atoms . . . . .	119
6. Conclusion . . . . .	120
References . . . . .	121

*Chapter 3*

## Radiofrequency Spectroscopy of Rydberg Atoms

*T. F. Gallagher*

1. Introduction . . . . .	127
2. Rydberg Atoms . . . . .	128
3. Core Polarization and Penetration . . . . .	130
3.1. Fine Structure . . . . .	138
3.2. The Stark Effect in Alkali Atoms . . . . .	138
4. Experimental Techniques . . . . .	139
4.1. Quantum Beats . . . . .	139
4.2. Optical Spectroscopy . . . . .	142
4.3. Radiofrequency Resonance . . . . .	142
4.4. Optical Detection . . . . .	143
4.5. Selective Field Ionization . . . . .	144
4.6. Delayed Field Ionization . . . . .	145
4.7. Selective Resonance Ionization . . . . .	148
4.8. Applicability . . . . .	149
5. Overview of the Results Obtained . . . . .	149
5.1. Quantum Defects-Core Polarization . . . . .	149
5.2. The Nonadiabatic Effects in Alkaline Earth Atoms . . . . .	151
5.3. Fine Structure Intervals of Alkali Atoms . . . . .	152
5.4. Applications . . . . .	154
References . . . . .	154

*Chapter 4*  
**Rydberg Series of Two-Electron Systems Studied by  
 Hyperfine Interactions**  
*H. Rinneberg*

1. Introduction . . . . .	157
2. Experimental Techniques . . . . .	160
2.1. Atomic Beam Experiments . . . . .	160
2.2. Experiments Using Vapor Cells . . . . .	167
3. Even-Parity Rydberg Series of Alkaline-Earth Elements . . . . .	179
3.1. $m_{ns} \ ^{1,3}S$ Rydberg Series of Ca ( $m = 4$ ), Sr ( $m = 5$ ), and Ba ( $m = 6$ ) . . . . .	179
3.2. $m_{nd} \ ^{1,3}D$ Rydberg Series of Ca, Sr, and Ba . . . . .	201
4. Odd-Parity Rydberg Series of Alkaline-Earth Elements . . . . .	225
4.1. Hyperfine Structure and Singlet-Triplet Mixing of $6snp \ ^1P_1$ Ba Rydberg States . . . . .	226
4.2. Hyperfine Structure of $6snf \ ^3F$ Rydberg Series of $^{137}\text{Ba}$ . . . . .	228
4.3. Hyperfine-Induced Singlet-Triplet Mixing of $3snf \ ^{1,3}F$ Rydberg States of $^{25}\text{Mg}$ . . . . .	229
5. Hyperfine Structure and Isotope Shifts of Rydberg States of Other Two-Electron Systems . . . . .	230
5.1. $6snl$ Rydberg Series of Yb . . . . .	230
5.2. $1sns$ and $1snd$ Rydberg States of $^3\text{He}$ . . . . .	232
6. Conclusion . . . . .	232
References . . . . .	233

*Chapter 5*  
**Parity Nonconservation in Atoms**  
*T. Peter Emmons and E. Norval Fortson*

1. Introduction . . . . .	237
1.1. The Weak Interaction—Charged Currents and Neutral Currents . . . . .	238
1.2. Atomic Structure and Parity Nonconservation . . . . .	238
1.3. Optical Rotation and Circular Dichroism . . . . .	239
2. Theory . . . . .	240
2.1. A Simple Calculation . . . . .	243
2.2. Effect in Heavy Atoms . . . . .	244
2.3. Transitions of Interest . . . . .	246
3. Circular Dichroism and Optical Rotation—Rigorous Discussion . . . . .	247
3.1. PNC-Stark Interference . . . . .	249
4. Optical Rotation Experiments . . . . .	249
4.1. Angle Resolution . . . . .	251
4.2. Faraday Rotation . . . . .	251
4.3. The Seattle Optical Rotation Experiments . . . . .	252
4.4. Results of the Seattle Bismuth Experiment . . . . .	257
4.5. Measurements on the $1.28\text{-}\mu\text{m}$ Line of Atomic Lead . . . . .	258
5. Stark-PNC Experiments; Cesium and Thallium . . . . .	260
6. Discussion of Results; Conclusions . . . . .	264
6.1. Future Prospects . . . . .	267
References . . . . .	268

*Chapter 6*
**Energy Structure of Highly Ionized Atoms**  
**Bengt Edlén**

1. Introduction . . . . .	271
2. General Energy Relations in Isoelectronic Ions . . . . .	273
3. Survey of the Low Configurations in Isoelectronic Sequences . . . . .	274
4. The $n = 2$ Configurations . . . . .	275
5. The Neon Sequence ( $N = 10$ ) . . . . .	276
6. Ions with Ground Configurations of $3s$ and $3p$ Electrons . . . . .	279
7. The Configurations $3d^k$ . . . . .	281
7.1. The Potassium Sequence ( $N = 19$ ) . . . . .	281
7.2. The Iron Sequence ( $N = 26$ ) . . . . .	283
7.3. The Cobalt Sequence ( $N = 27$ ) . . . . .	285
7.4. The Nickel Sequence ( $N = 28$ ) . . . . .	287
8. The Copper Sequence ( $N = 29$ ) . . . . .	288
9. The Silver Sequence ( $N = 47$ ) . . . . .	289
References . . . . .	291

*Chapter 7*
**Inner-Shell Spectroscopy with Hard Synchrotron Radiation**  
**Wolfgang Jitschin**

1. Introduction . . . . .	295
2. Instrumental Details . . . . .	297
2.1. Characteristics of Synchrotron Radiation . . . . .	297
2.2. X-Ray Monochromators . . . . .	301
2.3. X-Ray Detectors . . . . .	305
3. X-Ray Absorption by Free Atoms . . . . .	307
3.1. X-Ray Attenuation . . . . .	307
3.2. Energies and Widths of Inner-Shell Levels . . . . .	310
3.3. Correlation Effects in X-Ray Absorption . . . . .	314
4. X-Ray Absorption by Bound Atoms . . . . .	318
4.1. X-Ray Absorption near Edge Structure (XANES) . . . . .	319
4.2. Extended X-Ray Absorption Fine Structure (EXAFS) . . . . .	320
5. Induced X-Ray Fluorescence and Auger-Electron Emission . . . . .	326
5.1. Application for Chemical Analysis . . . . .	326
5.2. Decay Channels of Inner-Shell Vacancies . . . . .	327
5.3. Resonant Raman Auger (RRA) Process . . . . .	332
6. Scattering of X-Rays . . . . .	334
6.1. Rayleigh and Compton Scattering . . . . .	334
6.2. Resonant Raman Scattering (RRS) . . . . .	336
References . . . . .	342

*Chapter 8***Analysis and Spectroscopy of Collisionally Induced  
Autoionization Processes***R. Morgenstern*

1. Introduction . . . . .	347
2. Description of Autoionizing States . . . . .	349
2.1. The Independent Particle Model . . . . .	349
2.2. Correlated Electron Motion . . . . .	350
3. Experimental Methods . . . . .	352
3.1. Kinematical Effects . . . . .	353
3.2. Coincidence Experiments . . . . .	355
4. Line Shapes and Interference Effects in Autoionization Spectroscopy . . . . .	356
4.1. Direct Ionization and Autoionization . . . . .	358
4.2. Postcollision Interaction (PCI) in Ion-Atom Collisions . . . . .	359
4.3. PCI in Electron-Atom Collisions . . . . .	363
4.4. PCI-Influenced Auger Electron Spectra . . . . .	366
4.5. PCI-Induced Exchange of Angular Momentum . . . . .	369
5. Spectroscopic Data for Various Atoms . . . . .	370
5.1. H <sup>-</sup> and He . . . . .	370
5.2. Rare Gases Ne...Xe . . . . .	371
5.3. Alkali Atoms . . . . .	376
5.4. Alkaline Earth Atoms . . . . .	377
6. Correlated and Uncorrelated Angular Distributions of Autoionization Electrons . . . . .	378
6.1. Excitation Amplitudes and Density Matrix of Excited Atoms . . . . .	378
6.2. Theoretical Shapes of Angular Electron Distributions . . . . .	381
6.3. Coincidence Measurements to Determine Angular Correlations between Ejected Electrons and Scattered Projectiles . . . . .	385
6.4. Noncoincident Measurements of Angular Electron Distributions . . . . .	396
6.5. Electron Beats . . . . .	400
7. Electron Emission from Quasimolecules . . . . .	400
7.1. Coherent Electron Emission from Two Separated Collision Partners . . . . .	401
7.2. Quasimolecular Autoionization at Small Internuclear Distances . . . . .	404
References . . . . .	409

*Chapter 9***Near Resonant Vacancy Exchange between Inner Shells of  
Colliding Heavy Particles***N. Stolterfoht*

1. Introduction . . . . .	415
2. Theoretical Methods . . . . .	418
2.1. Vacancy Exchange Mechanisms . . . . .	418
2.2. Basic Formalism . . . . .	420
2.3. Model Matrix Elements . . . . .	425
3. Two-State Systems . . . . .	429
3.1. Two-State Formalism . . . . .	429
3.2. MO Energies and Radial Coupling Matrix Elements . . . . .	433
3.3. Highly Ionized Collision Systems . . . . .	437
3.4. Vacancy Sharing . . . . .	440

3.5. Impact Parameter Dependence . . . . .	446
3.6. Double Passage Process . . . . .	448
3.7. Total Cross Sections . . . . .	451
4. Multistate Systems . . . . .	453
4.1. General Considerations . . . . .	453
4.2. $KL$ - and $LK$ -Vacancy Sharing . . . . .	453
4.3. $L$ -Vacancy Sharing . . . . .	467
5. Conclusions . . . . .	471
<i>References</i> . . . . .	473
 <i>Chapter 10</i>	
Polarization Correlation in the Two-Photon Decay of Atoms	
A. J. Duncan	
1. Introduction . . . . .	477
2. Theoretical Considerations . . . . .	478
2.1. Polarization Correlation . . . . .	478
2.2. The Two-Photon State Vector . . . . .	480
2.3. Bell's Inequalities for the Ideal Case . . . . .	482
2.4. The BCHSH Inequality in Experimental Situations . . . . .	485
2.5. Quantum Mechanical Predictions . . . . .	486
2.6. The No-Enhancement Hypothesis . . . . .	488
2.7. The Schrödinger-Furry Hypothesis . . . . .	488
3. Experimental Work . . . . .	489
3.1. Experiment of Kocher and Commins (1967) . . . . .	489
3.2. Experiment of Freedman and Clauser (1972) . . . . .	490
3.3. Experiment of Holt and Pipkin (1973) . . . . .	491
3.4. Experiments of Clauser (1976) . . . . .	492
3.5. Experiment of Fry and Thompson (1976) . . . . .	493
3.6. Experiment of Aspect, Grangier, and Roger (1981) . . . . .	495
3.7. Experiment of Aspect, Grangier, and Roger (1982) . . . . .	496
3.8. Experiment of Aspect, Dalibard, Grangier, and Roger (1984) . . . . .	497
3.9. Experiment of Aspect, Dalibard, and Roger (1982) . . . . .	499
3.10. Experiments of Perrie, Duncan, Beyer, and Kleinpoppen (1985) . . . . .	500
4. Discussion . . . . .	503
<i>References</i> . . . . .	504
 INDEX . . . . .	507
