

Contents

xiii Preface

Section 1: Photophysics and spectroscopy

- 1–6 Resonant multiphoton ionization under broadband excitation:
application to the determination of isotopic composition
P Lambropoulos and A Lyras
- 7–12 Vacuum UV radiation arising from multiphoton ionization of rare gases
G Mainfray
- 13–16 The structure of the stable negative ion of calcium
D J Pegg, J S Thompson, R N Compton and G D Alton
- 17–20 Study of “rare” Rydberg states in a fast beam by resonant excitation
Stark ionization spectroscopy
S R Lundeen
- 21–24 Microwave multiphoton excitation and ionization
T F Gallagher, P Pillet, R C Stoneman, D S Thomson and C R Mahon
- 25–28 Three photon ionization of Na atoms
F Giammanco, L J Qin, A Vellante and E Arimondo
- 29–32 Mechanism study of the generation of frequency-doubled stimulated
emission in metal vapour by using RIS
Jing-yuan Zhang, Hai-tian Zhou and Pei Jin
- 33–36 Suppression of multiphoton excitation in resonance ionization
measurements
W R Garrett, M A Moore, R K Wunderlich and M G Payne
- 37–40 Autoionization spectroscopy of atomic oxygen from the $3p\ ^3P_J$ two-
photon excited state
J D Buck and W K Bischel
- 41–47 Measurement of atomic oscillator strengths using pulsed single-
frequency dye lasers
C Haynam, B Comaskey, M Johnson, J Paisner and E Worden
- 49–52 Influence of stimulated Raman scattering on the conversion efficiency in
four-wave mixing
R K Wunderlich, M A Moore, W R Garrett and M G Payne
- 53–56 Prospects for large dynamic range isotope analysis using photon burst
mass spectrometry
*W M Fairbank Jr, R D LaBelle, R A Keller, C M Miller, J Poths and
B L Fearey*

- 57–60 Two-photon spectroscopy of gases, liquids and solids
C H Chen, M P McCann and M G Payne
- 61–64 Anomalies in CO₂ laser photoionization of Rydberg sodium atoms near the ionization threshold
I M Beterov, I I Ryabtsev and N V Fateyev
- 65–68 Noise and excitation dynamics in RIS
R Salomaa, A Castren, J Ojanperä, X Zhan, I Auterinen and J Likonen
- 69–72 Population rate equation solution of a general resonant ionisation scheme
R P Singhal, A P Land, K W D Ledingham and M Towrie
- 73–79 Molecular and collisional processes during three photon ionisation transitions in caesium and rubidium vapours
M H C Smyth, S L T Drysdale, R Jennings, A P Land, K W D Ledingham, R P Singhal, D T Stewart, M Towrie and C M Houston
- 81–84 Multiphoton ionization of alkaline earth atoms in an intense laser field
D Kim and L F DiMauro
- 85–88 On the validity of Seaton's theorem when an intruder resonance occurs at the threshold
J P Connerade, Ma-Hui and Shen-Ning
- 89–92 Resonances in the electron impact ionization spectrum of Na
P Marmet and M Proulx

Section 2: Molecular resonance ionization spectroscopy

- 93–100 State selective ionization of molecular hydrogen
W Meier, H Rottke and H Zacharias
- 101–104 Multiphoton ionization of transient species in supersonic jets
J C Miller and C S Feigerle
- 105–108 Two-dimensional imaging of photofragments tagged by multiphoton ionization
J W Thoman Jr, D W Chandler, D H Parker and M H M Janseen
- 109–112 Two-photon (VUV+ visible) resonance ionization spectroscopy of molecular hydrogen
M P McCann, C H Chen and M G Payne
- 113–116 A new $1^1\Delta_u \leftarrow A^1\Pi_u$ band system of C₂ observed by multiphoton resonance ionization
T A Cool and P M Goodwin

- 117–120 Dynamical constraints on resonant ionization schemes for small molecules
J P Hessler, W L Glab and D G Ettinger
- 121–124 REMPI/MS studies of SiF₂ production from the thermal reaction of F₂ with doped and undoped Si(110)
J S Horwitz, C S Dulcey and M C Lin
- 125–128 Resonance enhanced multiphoton ionization detection of GeF and GeCl radicals
J W Hudgens, R D Johnson III and B Tsai
- 129–132 Resonance enhanced multiphoton ionization spectroscopy of 2-butene-1-yl (C₄H₇) between 455–485 nm
B P Tsai, R D Johnson III and J W Hudgens
- 133–136 A new electronic spectrum of the SiH₃ radical observed using multiphoton ionization spectroscopy
R D Johnson III, B P Tsai and J W Hudgens
- 137–140 Parameters of UV-laser desorbed neutral molecules as measured by multiphoton postionization
B Spengler, U Bahr and F Hillenkamp

Section 3: Atom reservoirs and sampling

- 141–146 Analytical characterization of resonance ionization and optogalvanic spectroscopy in atmospheric pressure atomizers
N Omenetto
- 147–150 Laser desorption/ablation studies by resonance ionization mass spectroscopy
N S Nogar, R C Estler, M W Rowe, B L Fearey and C M Miller
- 151–154 Laser-enhanced ionization spectrometry in a T-furnace
S Sjöström, M Lejon and H Rubinsztein-Dunlop
- 155–158 Resonance ionization mass spectroscopy of ¹⁸⁴Au(T_{1/2} = 53 s) and ¹⁸³Au(T_{1/2} = 42 s) in a pulsed atomic beam
U Krönert, St Becker, G Bollen, M Gerber, Th Hilberath, H-J Kluge and G Passler
- 159–162 Matrix effects in RIS-analysis using thermal atomization
R Zilliacus, E-L Lakomaa, I Auterinen and J Likonen
- 163–166 Laser ablation as an atomization source for ultratrace element analysis using resonance ionization time-of-flight mass spectrometry
D W Beekman and N Thonnard
- 167–170 Laser ablation of thin films as a free atom source for pulsed RIMS
L Bengtsson, J C Travis, T B Lucatorto, K Kreider and L Brown

- 171–174 High-resolution laser spectroscopy of laser-desorbed atoms
*G Savard, J K P Lee, J E Crawford, G Thekkadath, H T Duong,
 J Pinard, S Liberman, F Le Blanc, P Kilcher, J Obert, J Oms,
 J C Putaux, B Roussière and J Sauvage*
- 175–178 Analytical applications of RIS in flames
N V Chekalin, A G Marunkov and I Vlasov
- 179–182 The role of resonance photoionization of atoms in seeded flames
Y Y Kuznyakov, N B Zorov, V I Chaplygin and A A Gorbatenko

Section 4: Materials and surface analysis

- 183–187 Surface studies using ion beams and MPRI
N Winograd
- 189–192 Probing surface electronic structure of ionic crystals by resonant multiphoton ionization
J Reif, H B Nielsen, S Petzoldt, E Matthias, E Westin and A Rosén
- 193–196 Application of resonant ionisation mass spectroscopy to depth profiling in III–V semiconductor devices
C J McLean, J H Marsh, J W Cahill, S L T Drysdale, R Jennings, P T McCombes, A P Land, K W D Ledingham, R P Singhal, M H C Smyth, D T Stewart and M Towrie
- 197–200 Applications of sputter-initiated resonance ionization spectroscopy: recent results
J E Parks, M T Spaar, D W Beekman, L J Moore and P J Cressman
- 201–204 Studies on the analysis of trace metallic elements in semiconductors using RIMS
P Gelin, O Gobert, B Dubreuil, J L Debrun and R L Inglebert
- 205–206 Impurity analysis in SIMOX samples by high-efficiency resonance ionization time-of-flight mass spectrometry
C E Young, M J Pellin, W F Calaway, J W Burnett, D M Gruen, H J Stein and S S Tsao

Section 5: Noble gases

- 207–212 Noble gas isotopes in hydrology
B E Lehmann and H H Loosli
- 213–216 Counting ^{81}Kr atoms in groundwater using RIS-TOF
R D Willis, N Thonnard, M C Wright, B E Lehmann and D Rauber
- 217–220 Resonance ionization of Kr metastables using a single-frequency laser
B D Cannon and G R Janik

- 221–224 Method for the isotopically selective detection of inert gases
M G Payne
- 225–228 Alternative techniques for noble-gas detection
T J Whitaker and B D Cannon
- 229–232 Progress on the RISTRON
G S Hurst, M Bialkowski and D H Lowndes
- 233–236 Improved isotope enrichment system for processing minute noble gas samples
W A Davis and N Thonnard
- 237–240 Using ‘resonant’ charge exchange to detect traces of noble gas atoms
J E Hardis, W R Peifer, C L Cromer, A L Migdall and A C Parr

Section 6: New optical sources

- 241–246 XUV spectroscopy of ions produced by multiphoton absorption
K Boyer, G Gibson, H Jara, T S Luk, I A McIntyre, A McPherson, R Rosman, J C Solem and C K Rhodes
- 247–250 The NBS free electron laser facility
B C Johnson, P H Debenham, S Penner, C-M Tang and P Sprangle

Section 7: Resonance ionization mass spectrometry

- 251–254 Resonance ionization mass spectrometric study of the promethium/samarium isobaric pair
R W Shaw, J P Young and D H Smith
- 255–258 A resonance ionization spectroscopy/resonance ionization mass spectrometry data service
E B Saloman
- 259–262 Resonance ionization mass spectrometry of lead and bismuth mixtures
B L Fearey, J E Anderson, M W Rowe, C M Miller and N S Nogar
- 263–266 Secondary, non-resonant CW laser ionization efficiency enhancement for resonance ionization mass spectrometry
B L Fearey, D C Parent, R A Keller and C M Miller
- 267–271 The Glasgow resonant ionisation mass spectrometer
M Towrie, S L T Drysdale, R Jennings, A P Land, K W D Ledingham, P T McCombes, R P Singhal, M H C Smyth, D T Stewart, C M Houston and C J McLean
- 273–276 The microdetermination of silicon using resonance ionization spectroscopy
L J Moore, M T Spaar, E H Taylor, J E Parks and D W Beekman

Section 8: Isotope selectivity

- 277–280 Trace isotopic analysis by double resonance ionization with cw-lasers and graphite furnace atomization
B A Bushaw and G K Gerke
- 281–284 Resonance ionization spectroscopy of niobium: determination of $^{93m}\text{Nb}/^{93}\text{Nb}$ isomer ratio for fast neutron fluence measurements
I Auterinen, B Bärs, H Lauranto, K Nyholm and R Salomaa
- 285–288 Isotopically selective, Doppler-free, saturation spectroscopy of lutetium isotopes via resonance ionization mass spectrometry
B L Fearey, D C Parent, R A Keller and C M Miller
- 289–292 Resonance ionization of hyperfine levels of zirconium-91 using a pulsed single mode laser
P A Hackett, O L Bourne, D M Rayner, H Morrison and J Montgomery
- 293–296 Observation of anomalous isotope ratios in SIRIS measurements of molybdenum
W M Fairbank Jr, M T Spaar, J E Parks and J M R Hutchinson
- 297–300 High-fidelity in isotope ratio measurements by resonance ionization mass spectrometry
C M Miller, B L Fearey, B A Palmer and N S Nogar
- 301–307 Influence of velocity dependent collision processes on isotope-selective laser spectrochemistry
J Lawrenz, A Obrebski and K Niemax

Section 9: Medical and environmental

- 307–310 Excimer laser desorption and UV-MPI of neutral bio-organic molecules
B Spengler, U Bahr and F Hillenkemp
- 311–314 Low-levels of radionuclide analysis using resonantly enhanced collisional ionization
G K Gerke, B A Bushaw and T J Whitaker
- 315–318 Multiphoton ionization mechanism(s) of aromatic molecules in nonpolar fluids
H Faidas and L G Christophorou
- 319–322 Laser modification of the electrophoretic mobility
G Cherbit, N Albayaty and D Vekhoff
- 323–326 Experimental analysis of the presence of ionized atomic hydrogen in resonant MPI of benzene in the visible
R Bruzzese, F Esposito, S Solimeno, N Spinelli and M Armenante

- 327–330 Laser-enhanced ionization as an element specific detector for liquid chromatography
G C Turk, W A MacCrehan, K S Epler and T C O'Haver
- 331–336 Ultrasensitive laser photoionization analysis in oceanology, geochemistry, and geology
G I Bekov and V S Letokhov
- 337–342 The use of resonance ionization mass spectrometry for measuring the isotopic compositions of rhenium and osmium extracted from silicate rocks
R J Walker, J D Fassett and J C Travis

Section 10: Physics applications

- 343–350 ^{81}Kr in meteorites and lunar rocks as a clue for the cosmic-ray exposure history of solar system material
O Eugster
- 351–356 RIMS as an analytical tool for the investigation of trace elements
H Rimke, G Herrmann, M Mang, C Mühleck, J Riegel, P Sattelberger, N Trautmann, F Ames, A Becker, H-J Kluge, L Mouz, E-W Otten, D Rehlau and W Ruster
- 357–362 Detection of trace levels of radioactive decay products: Is it possible to determine beta-beta decay half-lives?
D M Hrubowchak, D L Pappas, M H Ervin, N Winograd and L Mitchell

Section 11: Technical and experimental aspects

- 363–366 Adaptation of ion trajectory calculations to RIS and TOFMS systems
M C Wright
- 367–370 Influence of laser characteristics on resonance ionization mass spectrometry
J P Young, R W Shaw, D E Goeringer and D H Smith
- 371–374 Space charge effects under nonlinear ionization of indium in a two-frequency field
I M Beterov and V L Kurochkin
- 375–378 Two-fluid description of the time–space evolution of charges produced in typical multiphoton ionization experiments
F Giammanco
- 379–382 Development of the NBS beryllium isotopic standard reference material
J D Fassett, K G W Inn and R L Watters Jr
- 383–384 The amplification mechanism of thermionic diode detectors
D H Wu and Z X Zhang

Section 12: Invited paper (*received at proof stage*)

- 385–390 Final-state determination in interactions of directed energetic photon
 and particle beams with surfaces
 N H Tolk, R G Albridge, A V Barnes and D P Russell

- 391–392 Author Index
