

Contents

1. Introduction: Structure and Structuring of Solids.	
By H.-J. Queisser	1
1.1 Scope	1
1.2 X-Rays and Solids	2
1.2.1 Optics and Solids	2
1.2.2 X-Rays and Solid-State Physics	3
1.2.3 Outlook	3
1.3 Sources	4
1.4 Structuring with X-Ray Techniques	4
1.5 Interferometry	5
1.6 Defect Structure Topography	6
References	7
2. High Brilliance X-Ray Sources. By M. Yoshimatsu and S. Kozaki (With 15 Figures)	9
2.1 History of the Development	9
2.2 Brilliance of X-Ray Sources on Stationary and Moving Targets	12
2.2.1 Brilliance of Foci for Stationary Targets	12
2.2.2 Brilliance of Foci for Rotary Targets	15
2.2.3 X-Ray Yield	18
2.3 Technical Problems	19
2.3.1 Electron Guns	19
2.3.2 Construction of Rotary Targets	22
2.3.3 Vacuum Seals	24
2.3.4 Cooling Water	24
2.3.5 Influences of Back-Scattered Electrons	25
2.4 Contemporary Rotary Anode and Microfocus X-Ray Generators	25
2.4.1 Rotary Anode X-Ray Generators	25
2.4.2 Microfocus X-Ray Generators	26
2.5 Special X-Ray Generators	27
2.5.1 Soft X-Ray Generators	27
2.5.2 Super High-Power X-Ray Generators	28
2.5.3 Extreme Brilliance X-Ray Generators	29
2.5.4 Pulsed X-Ray Generators	31
2.5.5 Outlook	31
References	32

3. X-Ray Lithography. By E. Spiller and R. Feder. (With 32 Figures)	35
3.1 Background	35
3.2 Description	35
3.3 Wavelength Selection	36
3.4 Masks	39
3.4.1 Silicon Membranes	40
3.4.2 Si_3N_4 and $\text{Si}_3\text{N}_4 + \text{SiO}_2$ Membranes	41
3.4.3 Organic Films	41
3.5 X-Ray Sources	42
3.5.1 X-Ray Generation by Electron Bombardment	42
3.5.2 Synchrotron Radiation Sources	45
3.5.3 Laser Generated Plasmas as X-Ray Sources	47
3.6 X-Ray Resists	48
3.6.1 Performance of an Ideal Resist	49
3.6.2 Real Resists	52
Resist Characterization (Example PMMA)	53
Resolution	59
Sensitized X-Ray Resists	60
Resist Summary	62
3.7 Alignment	64
3.7.1 Possible Alignment Configurations	65
Optical Alignment	67
X-Ray Alignment	67
3.7.2 Self-Aligning Methods	68
3.8 Subsequent Processing Steps	70
3.9 X-Ray Lithographic Systems	75
3.9.1 Parallel Exposure of Many Wafers	76
3.9.2 Single Wafer Exposure	77
3.10 Applications	79
3.10.1 Magnetic Bubble Devices	79
3.10.2 Semiconductor Devices	80
3.10.3 Microscopy of Biological Objects	82
3.11 Performance and Limitations	83
3.12 Outlook: Focusing Elements for Soft X-Rays	86
References	88
4. X-Ray and Neutron Interferometry. By U. Bonse and W. Graeff (With 25 Figures)	93
4.1 Essentials of X-Ray and Neutron Interferometry	94
4.1.1 Relation to Electron Interferometry	94
4.1.2 Principles of Interferometry	95
4.1.3 Experimental Realization of Interferometry with X-Rays and Thermal Neutrons	95

4.2 Interferometer Components 98

 4.2.1 Plane Wave Theory of Interferometric Components 99

 Beam Splitters 100

 Mirrors and Analyzers 109

 Influence of Component Translations 110

 4.2.2 Nonplanar Waves 111

4.3 The LLL-Interferometer 114

 4.3.1 General Expressions for the Amplitudes 115

 4.3.2 The Ideal Geometry 116

 4.3.3 Energy Flow Considerations 118

 4.3.4 Geometrical Tolerances, Influence of Defocusing 119

 4.3.5 Positional Stability, Polyolithic Interferometers 122

4.4 Other Interferometer Types: Suggestions and Realizations 123

 4.4.1 Laue Case Variations of the LLL-Interferometer 124

 4.4.2 Bragg Case Interferometers 125

 4.4.3 The Three-Beam Case Interferometer 126

 4.4.4 Mixed Bragg-Laue Case Interferometers 126

 4.4.5 Michelson Interferometers 128

4.5 Applications 128

 4.5.1 Moiré Technique and Defect Study 129

 4.5.2 Absolute Measurement of Lattice Parameter 131

 4.5.3 Determination of Scattering Factors f and Coherent
 Scattering Lengths b_c 133

 4.5.4 Phase Contrast Topography 136

 4.5.5 Special Applications in Neutron Interferometry 136

4.6 Conclusions 139

References 140

5. Section Topography.

By A. Authier (With 36 Figures) 145

5.1 Principles of X-Ray and Neutron Topography 146

 5.1.1 Basic Topographic Methods 146

 5.1.2 Section Topography 146

 5.1.3 Double Crystal Topography 149

 5.1.4 Special Techniques 149

 5.1.5 Neutron Topography 150

5.2 Bases of the Dynamical Theory of X-Ray Diffraction 152

 5.2.1 Introduction 152

 5.2.2 The Propagation Equation 152

 5.2.3 Plane Wave Theory 154

 5.2.4 Anomalous Transmission 159

 5.2.5 Spherical Wave Theory 160

5.3 Discussion of the Intensity Distribution Across a Section Pattern	163
5.3.1 Intensity Distribution for Each Branch of the Dispersion Surface	163
5.3.2 Pendellösung or Kato Fringes	164
5.4 Propagation of Wave Fields in a Deformed Crystal	166
5.4.1 Introduction	166
5.4.2 Small Strains	166
5.4.3 Large Strains	168
5.5 Dislocation Images on a Section Topograph	169
5.5.1 Various Types of Images	169
5.5.2 Direct Images	170
5.5.3 Dynamical Images	173
5.5.4 Intermediary Images	175
5.5.5 Deformation of Pendellösung Fringes in the Neighborhood of a Dislocation	177
5.6 Images of Planar Defects on Section Topographs	177
5.6.1 Various Types of Planar Defects	177
5.6.2 Stacking Faults	178
5.6.3 Twin Boundaries	183
5.6.4 Misorientation Boundaries	184
5.6.5 Boundaries Associated with a Strain Gradient	185
References	187

6. Live Topography.

By W. Hartmann (With 25 Figures)	191
6.1 X-Ray Topography	192
6.2 Direct-Display Systems	194
6.2.1 Single-Stage Imaging	196
6.2.2 Multiple-Stage Imaging	206
6.3 Summary	213
6.4 Future Trends	216
6.4.1 X-Ray Sources	216
6.4.2 Detector Systems	216
6.4.3 Electronic Image Processing	217
References	217
