1 Double-Resonance Spectroscopy

Jeffrey I. Steinfeld and Paul L. Houston

| | | |
|----------|--|----|
| 1.1. | Introduction to Double-Resonance Methods | 1 |
| 1.1.1. | Introduction | 1 |
| 1.1.2. | Dynamics of the Interaction of Radiation and Matter | 2 |
| 1.1.3. | Summary of Molecular Spectroscopy | 4 |
| 1.1.3.1. | Rotational Energy Levels | 5 |
| 1.1.3.2. | Vibrational Energy Levels | 7 |
| 1.1.3.3. | Electronic Energy Levels | 8 |
| 1.1.4. | Definition of Double-Resonance Spectroscopy | 11 |
| 1.1.5. | Historical Survey | 13 |
| 1.2. | Response of a System to Pumping and Analyzing Radiation Fields | 14 |
| 1.2.1. | Saturation of Molecular Absorption Lines | 14 |
| 1.2.2. | Double Resonance in a Three-Level System | 17 |
| 1.2.3. | Rate-Equation Analysis of Double Resonance | 19 |
| 1.3. | Experimental Considerations | 22 |
| 1.3.1. | Radiation Sources | 22 |
| 1.3.1.1. | Klystrons | 22 |
| 1.3.1.2. | Fixed-Frequency Lasers | 23 |
| 1.3.1.3. | Tunable Lasers | 26 |
| 1.3.2. | Signal Detection and Enhancement | 31 |
| 1.3.2.1. | Detectors | 31 |
| 1.3.2.2. | Lock-In Amplifier | 32 |
| 1.3.2.3. | Boxcar Averager | 34 |
| 1.3.2.4. | Transient Recorder | 36 |
| 1.3.3. | Detection by Fluorescence versus Absorption Techniques | 38 |
| 1.3.4. | Experimental Configurations | 40 |
| 1.4. | Microwave-Detected Double Resonance | 41 |
| 1.4.1. | Microwave Pumping | 41 |
| 1.4.1.1. | Carbon Oxysulfide | 43 |

| | | |
|----------|--|----|
| 1.4.1.2. | Ammonia | 44 |
| 1.4.1.3. | Formaldehyde | 45 |
| 1.4.1.4. | Ethylene Oxide | 45 |
| 1.4.1.5. | Hydrogen Cyanide | 46 |
| 1.4.1.6. | Other Systems | 47 |
| 1.4.2. | Infrared Pumping | 47 |
| 1.4.2.1. | Methyl Halides | 53 |
| 1.4.2.2. | Ammonia | 53 |
| 1.4.3. | Optical Pumping | 62 |
| 1.5 | Infrared-Detected Double Resonance | 62 |
| 1.5.1. | Microwave Pumping | 62 |
| 1.5.2. | Infrared Pumping | 63 |
| 1.5.2.1. | Vibrational Energy Transfer | 68 |
| 1.5.2.2. | Rotational Energy Transfer | 78 |
| 1.5.2.3. | Dephasing, Momentum Transfer, and Molecular Alignment | 79 |
| 1.5.3. | Optical Pumping | 81 |
| 1.6. | Optically Detected Double Resonance | 82 |
| 1.6.1. | Microwave–Optical Double Resonance | 82 |
| 1.6.1.1. | Microwave–Optical Double Resonance in Atoms | 83 |
| 1.6.1.2. | Microwave–Optical Double Resonance in CN | 90 |
| 1.6.1.3. | Microwave–Optical Double Resonance in OH and OD | 91 |
| 1.6.1.4. | Microwave–Optical Double Resonance in CS | 92 |
| 1.6.1.5. | Microwave–Optical Double Resonance in BaO | 92 |
| 1.6.1.6. | Microwave–Optical Double Resonance in NO ₂ | 93 |
| 1.6.1.7. | Microwave–Optical Double Resonance in NH ₂ | 95 |
| 1.6.1.8. | Microwave–Optical Double Resonance in BO ₂ | 95 |
| 1.6.2. | Infrared–Optical Double Resonance | 95 |
| 1.6.2.1. | Infrared–Optical Double Resonance in NH ₃ | 96 |
| 1.6.2.2. | Infrared–Optical Double Resonance in OsO ₄ | 98 |
| 1.6.2.3. | Infrared–Optical Double Resonance in Biacetyl | 98 |
| 1.6.2.4. | Infrared–Optical Double Resonance in F ⁸⁺ | 98 |

| | | |
|----------|--|-----|
| 1.6.2.5. | Infrared–Optical Double Resonance in Coumarin-6 | 99 |
| 1.6.3. | Optical–Optical Double Resonance | 100 |
| 1.6.3.1. | Optical–Optical Double Resonance in Atoms | 101 |
| 1.6.3.2. | Optical–Optical Double Resonance in Diatomic Molecules | 107 |
| 1.6.3.3. | Optical–Optical Double Resonance in Polyatomic Molecules | 111 |
| 1.6.4. | Optically Detected Double Resonance in Large Molecules | 112 |
| 1.7. | Molecular Information from Double-Resonance Experiments | 113 |
| 1.7.1. | Spectroscopic Information | 113 |
| 1.7.2. | Energy Transfer and Interaction Potentials | 114 |
| 1.7.3. | Future Directions | 116 |
| | References | 117 |

2 Coherent Transient Microwave Spectroscopy and Fourier Transform Methods

T. G. Schmalz and W. H. Flygare

| | | |
|------|---|-----|
| 2.1. | Introduction | 125 |
| 2.2. | Basic Theory and Experiment | 127 |
| 2.3. | Transient Absorption | 136 |
| 2.4. | Transient Emission | 146 |
| 2.5. | Fast Passage | 158 |
| 2.6. | Fourier Transform Microwave Spectroscopy | 163 |
| 2.7. | Molecular Interpretation of T_1 and T_2 | 180 |
| 2.8. | Conclusion | 187 |
| | Appendix A. Solution of the Bloch Equations | 189 |
| | Appendix B. Two-State Relaxation Processes | 192 |
| | References | 195 |

3 Coherent Transient Infrared Spectroscopy

R. L. Shoemaker

| | | |
|--------|--|-----|
| 3.1. | Introduction | 197 |
| 3.2. | Density and Population Matrices | 200 |
| 3.2.1. | Basic Theory | 200 |
| 3.2.2. | Physical Interpretation and Applicability | 211 |
| 3.3. | Absorption and Emission of Radiation | 214 |
| 3.3.1. | Polarization and Reduced Wave Equations | 214 |
| 3.3.2. | Steady-State Absorption: An Example | 220 |
| 3.4. | Solutions of the Population Matrix Equations | 224 |
| 3.4.1. | Introduction | 224 |

| | | |
|----------------------|--|-----|
| 3.4.2. | Optical Bloch Equations | 226 |
| 3.4.3. | Matrix Solution of the Optical Bloch Equations | 231 |
| 3.5. | Experimental Techniques | 238 |
| 3.5.1. | Pulsed Laser Experiments | 238 |
| 3.5.2. | Stark Switching | 239 |
| 3.5.3. | Frequency Switching | 244 |
| 3.6. | Optical Nutation | 245 |
| 3.7. | Optical Free Induction Decay | 254 |
| 3.7.1. | Theory and Experiment | 254 |
| 3.7.2. | Superradiance | 270 |
| 3.8. | Photon Echo | 272 |
| 3.8.1. | Two-Pulse Echoes | 272 |
| 3.8.2. | Multiple-Pulse Echoes | 288 |
| 3.9. | Measurement of Level Decay Rates | 303 |
| 3.9.1. | Adiabatic Rapid Passage | 304 |
| 3.9.2. | Delayed Optical Nutation | 319 |
| 3.10. | Velocity-Changing Collisions | 329 |
| 3.10.1. | Introduction | 329 |
| 3.10.2. | Brownian Motion and Velocity-Changing Collisions | 336 |
| 3.10.3. | Photon Echoes and Velocity-Changing Collision Measurements | 342 |
| Appendix A. | Justification of the Reduced Wave Equation | 360 |
| Appendix B. | Matrix Formulation of the Bloch Equations | 363 |
| References | | 369 |

4 *Coherent Spectroscopy in Electronically Excited States*

Charles B. Harris and William G. Breiland

| | | |
|----------|---|-----|
| 4.1. | Introduction | 373 |
| 4.1.1. | Historical Development | 374 |
| 4.1.2. | Recent Advances | 375 |
| 4.2. | Theoretical Considerations | 376 |
| 4.2.1. | General Aspects of Coherence in Excited States | 376 |
| 4.2.2. | Equation of Motion for the Model System | 380 |
| 4.2.2.1. | Basic Torque Equation in the Rotating Frame | 381 |
| 4.2.2.2. | Addition of Feeding and Decay Terms | 382 |
| 4.2.2.3. | Exact Solutions, Including Feeding and Decay | 384 |
| 4.2.2.4. | Addition of Relaxation Terms | 385 |
| 4.2.2.5. | Exact Solutions, Including Feeding, Decay, and Relaxation | 387 |

| | |
|--|-----|
| 4.2.2.6. Discussion | 388 |
| 4.2.2.7. Inhomogeneous Relaxation and Expected Line Shapes | 389 |
| 4.2.3. Relationship Between the Geometrical Model and Double-Resonance Observables | 392 |
| 4.2.3.1. Density Matrix and Dipole Emission . . | 392 |
| 4.2.3.2. Probe Pulse Method | 393 |
| 4.2.4. Experiments Utilizing Optically Detected Coherence | 397 |
| 4.2.4.1. Introduction | 397 |
| 4.2.4.2. Transient Nutation | 398 |
| 4.2.4.3. Free Induction Decay and Spin Echo . . | 399 |
| 4.2.4.4. Echo Trains and Coherent Averaging . . | 401 |
| 4.2.4.5. Spin Locking and Coherent Averaging . . | 406 |
| 4.2.4.6. Rotary Echoes and Driving-Field Inhomogeneities | 410 |
| 4.2.4.7. Adiabatic Demagnetization and Rapid Passage | 412 |
| 4.3. Experimental Methods | 418 |
| 4.3.1. Excited Triplet States and Phosphorescence Spectroscopy | 418 |
| 4.3.2. Conventional Techniques: Optically Detected Magnetic Resonance | 421 |
| 4.3.3. Pulse Techniques in Optically Detected Magnetic Resonance | 422 |
| 4.3.3.1. Transient Nutation and Pulse Timing . . | 427 |
| 4.3.3.2. Short Coherence Sequences | 428 |
| 4.3.3.3. Long Coherence Sequences | 429 |
| 4.3.3.4. Triplet-State Multiplets and Orientation Factors | 430 |
| 4.4. Applications | 431 |
| 4.4.1. Preliminaries | 431 |
| 4.4.2. Addition of Energy Exchange to the Equations of Motion | 432 |
| 4.4.2.1. Loss of Spin Memory in the Slow Exchange Limit | 437 |
| 4.4.2.2. Retention of Spin Memory in Scattering in the Fast Exchange Limit | 438 |
| 4.4.3. Energy Transfer Studies Using Coherent Spectroscopy Techniques | 439 |
| 4.4.4. Vibrational Relaxation Studies Using Coherence Techniques | 444 |
| 4.4.5. Energy Transfer Studies Using an Ordered State | 445 |
| References | 448 |

5 Resonant Scattering of Light by Molecules: Time-Dependent and Coherent Effects

F. A. Novak, J. M. Friedman, and R. M. Hochstrasser

| | | |
|--------|--|-----|
| 5.1. | Elementary Time-Dependent Theory Related to Luminescence | 451 |
| 5.1.1. | Introduction | 451 |
| 5.1.2. | Scattering Theory | 454 |
| 5.1.3. | Approximate Model for the Photon States | 456 |
| 5.1.4. | Molecular States | 457 |
| 5.1.5. | Matrix Elements of $G(\omega)$ | 459 |
| 5.1.6. | Excitation of an Isolated Resonant State: A Two-Level System | 463 |
| 5.1.7. | Semiclassical Analogy | 464 |
| 5.2. | Applications of Scattering Theory to Model Systems | 465 |
| 5.2.1. | Three-Level System | 465 |
| 5.2.2. | Scattering of an Exponentially Decaying Pulse | 465 |
| 5.2.3. | Semiclassical Treatment of the Three-Level System | 468 |
| 5.2.4. | Resonance and Near-Resonance Raman Scattering | 469 |
| 5.3. | Nature of the Electromagnetic Field | 471 |
| 5.3.1. | Definition of the Field Variables | 471 |
| 5.3.2. | Radiation–Matter Interaction | 472 |
| 5.3.3. | States of the Radiation Field | 473 |
| 5.3.4. | Measurables of the Field and Photon Experiments | 475 |
| 5.4. | Theory of Light Scattering with Well-Defined Light Sources | 479 |
| 5.4.1. | More General Approach to Light Scattering | 479 |
| 5.4.2. | Spectral Content of a Scattered Coherent Pulse | 480 |
| 5.4.3. | Scattering from a Gaussian Pulse | 483 |
| 5.4.4. | Scattering from a Weak Stationary Light Beam | 483 |
| 5.5. | Effects of Intermolecular Interactions on Luminescence | 486 |
| 5.5.1. | Resonance Scattering (Raman Fluorescence) in the Presence of Fluctuations | 486 |
| 5.5.2. | Random Modulation in Resonance Raman Scattering | 488 |
| 5.5.3. | Classical Character of Fluorescence | 493 |
| 5.5.4. | Absorption and Scattering | 494 |
| 5.5.5. | Spectroscopic Selection Rules for Resonance Raman, Fluorescence, and Phosphorescence | 498 |

| | | |
