<b>1. The Components of Theoretical Spectroscopy</b>	<b>1</b>
1.1. Introduction	1
1.2. Classical Description of Radiation Fields	2
1.3. The Quantum Description of Matter	11
1.4. The Density Matrix	17
1.5. Physical Properties of the Density Matrix	25
1.6. Relaxation Terms in the Density Matrix Equation of Motion	29
1.7. Coherence and Dephasing	36
1.8. Adiabatic Elimination Procedures	43
1.9. Effects of Atomic Motion	47
1.10. Time-Dependent and Steady State Spectroscopy	53
1.11. Comments and References	55
<b>2. Physical Effects of Strong Fields on Matter</b>	<b>57</b>
2.1. The Basic Concepts of Light-Induced Effects on Atomic Matter	57
2.2. Stationary Two-Level Atoms in a Standing Wave	63
2.3. Strong Field Effects in Radio-Frequency Spectroscopy	71
2.4. Moving Atoms in a Traveling Wave	80
2.5. Moving Atoms in a Standing Wave	87
2.6. Correction Terms for Moving Atoms	93
2.7. Strong Signal Theory for Moving Atoms	97
2.8. Comments and References	104
<b>3. Foundation of Laser Theory</b>	<b>106</b>
3.1. General Conditions for Laser Operation	106
3.2. The Traveling Wave Amplifier	113

3.3.	The Traveling Wave Laser	117
3.4.	More General Laser Theory	122
3.5.	The Standing Wave Laser	127
3.6.	A Laser with a Saturable Absorber	134
3.7.	Comments and References	139
<b>4.</b>	<b>Topics in Laser Spectroscopy</b>	<b>141</b>
4.1.	Introduction	141
4.2.	Saturation Spectroscopy	143
4.2.a.	General Ideas	143
4.2.b.	The Theoretical Description	145
4.2.c.	Comments and References	150
4.3.	The Three-Level System	150
4.3.a.	General Remarks	150
4.3.b.	The Theoretical Description	152
4.3.c.	Doppler-Free Two-Photon Spectroscopy	157
4.3.d.	The Two-Photon Transition Near Resonance	159
4.3.e.	Saturation Effects on the Probe	162
4.3.f.	Comments and References	165
4.4.	Coherence Phenomena and Level-Crossing Signals	166
4.4.a.	Background	166
4.4.b.	General Considerations	168
4.4.c.	The Perturbation Calculation	171
4.4.d.	Some Cases of Physical Interest	175
4.4.e.	Level Crossing in a Lower Level	180
4.4.f.	Comments and References	181
4.5.	Multiphoton Processes	182
4.5.a.	Background Information	182
4.5.b.	The Steady State Situation	184
4.5.c.	The Effective Two-Level System	186
4.5.d.	The Harmonic Oscillator	189
4.5.e.	Comments and References	193
<b>5.</b>	<b>Effects of Field Fluctuations on Spectroscopy</b>	<b>194</b>
5.1.	Stochastic Behavior of Physical Parameters	194
5.2.	Theory of Phase Noise	199
5.2.a.	Phase Noise in Linear Spectroscopy	199
5.2.b.	Phase Noise on the Two-Level System	207

CONTENTS	xi
5.3. Amplitude Fluctuations in a Single-Mode Laser	211
5.3.a. The Two-Level System	211
5.3.b. The Three-Level System with a Probe	214
5.4. The Free-Running Multimode Laser	218
5.4.a. Statistics of Multimode Light	218
5.4.b. The Two-Level System	222
5.5. Comments and References	225
<b>6. Elements of Electromagnetic Field Quantization</b>	<b>227</b>
6.1. Introduction	227
6.2. Decomposition of the Classical Fields	228
6.3. Quantization of the Field	235
6.4. Some Perturbation Calculations	237
6.5. Spontaneous Decay Terms for the Density Matrix	242
6.6. Resonance Fluorescence in a Strong Field	246
6.7. Comments and References	255
