1. Introduction. By M. Cardona and G. Güntherodt	1
1.1 Contents of Previous Volumes	1
References	3
2. Light Scattering by Free Carrier Excitations in Semiconductors	
By G. Abstreiter, M. Cardona, and A. Pinczuk (With 99 Figures)	5
2.1 Introduction and Historical Survey	6
2.2 Light Scattering by Electron Plasmas in Semiconductors	10
2.2.1 Electron-Photon Coupling in Semiconductors	10
2.2.2 Single-Component Plasmas	11
2.2.3 Fluctuation-Dissipation Analysis	14
2.2.4 Single-Component Plasmas: Highly Diluted Case	16
2.2.5 Single-Component Plasmas: The High Density Case	18
2.2.6 Multicomponent Plasmas	21
2.2.7 The Simple Two-Component Plasma: Acoustic and Optic Plasmons	23
2.2.8 The Simple Two-Component Plasma: Neutral Density Excitations	26
2.3 Resonant Light Scattering by Free Electron Excitations	27
2.3.1 General Considerations for Light Scattering Cross Sections	28
a) Electron-Density Fluctuations	28
b) Charge-Density Fluctuations	32
c) Spin-Density Excitations	34
d) Coupled Plasmons LO-Phonons	36
2.3.2 Experimental Results	41
a) $E_0 + \Delta_0$ Gap: Single-Particle Excitations	43
b) $E_0 + \Delta_0$ Gap: Collective Modes	48
c) E_1 and $E_1 + \Delta_1$ Gaps	51
2.4 Scattering by Free Carriers: The Wavevector- and Frequency-Dependent Dielectric Function	53
2.4.1 Background	53
2.4.2 Light Scattering Response Functions	55
2.4.3 Doped Semiconductors	60
a) n-Type GaAs	60
b) n-Type GaAs Under High Hydrostatic Pressure	64
c) n-Type GaSb	65
d) p-Type GaAs	66

2.4.4	Photoexcited Plasmas	69
2.5	Light Scattering by Two-Dimensional Electron Systems	74
2.5.1	Resonant Light Scattering	74
2.5.2	GaAs-(Al _x Ga _{1-x})As Heterostructures	77
a)	Intersubband Spectroscopy	79
b)	Intersubband Spectroscopy: Collective Electron LO-Phonon Modes	81
c)	Intersubband Spectroscopy: Correlation with Transport Properties	83
d)	Intersubband Spectroscopy: Resonant Enhancements	85
e)	Intersubband Spectroscopy: Photoexcited Plasmas	87
f)	Spectroscopy of In-Plane Motion: Landau Level Excitations	89
g)	Spectroscopy of In-Plane Motion: Plasma Oscillations	90
2.5.3	Ge-GaAs Heterostructures	92
2.5.4	Periodic GaAs Doping Multilayer Structures	94
a)	Description of the System	94
b)	Tunable Effective Energy Gap Photoluminescence	97
c)	Single-Particle and Collective Excitations	98
2.5.5	Metal-Insulator-Semiconductor Structures	100
a)	Electrons at InAs Surfaces	101
b)	Hole Accumulation Layers in Si	103
c)	Electron Accumulation Layers in InP	106
2.6	Barriers on Semiconductor Surfaces	107
2.6.1	Electric-Field-Induced Raman Scattering	108
2.6.2	Unscreened LO Phonons and Coupled Modes	114
2.6.3	Resonance Effects in InAs	116
2.7	Light Scattering in Heavily Doped Silicon and Germanium	117
2.7.1	Scattering by Intervalley Density Fluctuations	119
a)	n-Type Si	122
b)	p-Type Si	125
2.7.2	Interaction Between Raman Phonons and Electronic Continua	127
a)	n-Type Si	131
b)	p-Type Si	133
c)	Local Vibrational Modes of B in Si	140
d)	p-Type Ge, p-Type GaAs	142

3. High Resolution Spin-Flip Raman Scattering in CdS

By S. Geschwind and R. Romestain (With 28 Figures) 151

3.1 Introductory Comments 151

3.1.1 Historical Background 151

3.1.2 Role of High Resolution Fabry-Perot Spectroscopy in SFRS 151

3.1.3 Experimental Procedure 152

3.2	Review of Spin-Flip Raman Scattering	153
3.2.1	Classical Picture and Role of Spin-Orbit Coupling	153
3.2.2	Cross Section by Semiclassical Treatment: Raman Dipole $\mathbf{D}^{(2)}$	154
3.2.3	Momentum Representation for Delocalized Electrons	156
3.2.4	SFRS in Terms of Quantization of Radiation Field	156
3.2.5	SFRS as Measuring the Transverse Spin Susceptibility $\chi_+(\mathbf{q}, \omega)$	157
3.2.6	Multiple Spin-Flip Raman Scattering	158
3.3	Excited States Contributing to SFRS in CdS	159
3.3.1	SFRS Selection Rules for C_{3v} Symmetry	159
3.3.2	Role of Bound Excitons in SFRS from Bound Donors	160
3.3.3	Excited States for Scattering from Delocalized Electrons	163
3.3.4	Polariton Effects in CdS	164
3.4	The Insulator-Metal (IM) Transition in CdS Studied by SFRS	165
3.4.1	The Insulator-Metal Transition	165
3.4.2	Charge Diffusion in Terms of a Collisionally-Narrowed Doppler Width	166
3.4.3	Distinction Between Spin and Charge Diffusion	167
3.4.4	Experimental Results on Diffusive Linewidths	168
3.5	Relationship Between Spin Faraday Rotation and SFRS	170
3.5.1	Spin Faraday Rotation and Raman Dipole	170
3.5.2	Wavelength Dependence of SFRS Cross Section in CdS Determined from Spin Faraday Rotation	171
3.5.3	Measurement of Donor Susceptibility by Faraday Rotation	173
3.5.4	Measurement of Donor Relaxation T_1 by Faraday Rotation	174
3.6	Determination of the k -Linear Term in the Conduction Band of CdS by SFRS	174
3.6.1	Origin of the k -Linear Term	174
3.6.2	Appearance of the k -Linear Term in Diffusional SFRS Linewidth	176
3.6.3	Comparison of λ in Conduction and Valence Bands	178
3.6.4	Generalization to Bound Donors with Spin Diffusion	179
3.7	Bound Donors as Model Amorphous Antiferromagnets	181
3.7.1	Static Properties Studied by Faraday Rotation	181
3.7.2	Dynamics of the Amorphous Antiferromagnet	184
	a) Low-Field Regime: Pure Spin Diffusion	184
	b) High-Field Case: Field-Induced Exchange Stiffness and Dispersion	186
3.8	Coherence Effects in SFRS and Stimulated SFRS	188
3.8.1	Scattering from Coherent States in CdS	188
3.8.2	Experimental Observation of SFRS from Coherent States and Phase Matching	190
3.8.3	SFRS from Coherent States Viewed as Modulation of Faraday Rotation	192

3.8.4 Stimulated SFRS	194
3.8.5 Raman Echo	197
References	199

4. Spin-Dependent Raman Scattering in Magnetic Semiconductors

By G. Güntherodt and R. Zeyher (With 19 Figures)	203
4.1 Outline	203
4.2 Phenomenological Theory	205
4.3 Microscopic Theory	212
4.4 Scattering in the Paramagnetic Phase of EuX (X=O, S, Se, Te)	216
4.4.1 Selection Rules and Scattering Intensity	216
4.4.2 Coupling Constants and Resonance Enhancement	220
4.4.3 Second-Order Raman Scattering	221
4.5 Raman Scattering in the Magnetically-Ordered Phases of EuX (X=O, S, Se, Te)	223
4.5.1 Ferromagnetic Phase	223
4.5.2 Magnetic “Bragg” Scattering from Spin Superstructures	225
4.5.3 Resonant Raman Scattering	227
4.6 Spin Fluctuations near Magnetic Phase Transitions	230
4.7 Cadmium-Chromium (Cd-Cr) Spinel (CdCr ₂ X ₄ , X=S, Se)	232
4.8 Vanadium Dihalides	236
4.9 Conclusions	238
Note Added in Proof	239
References	240

5. Raman Scattering in Rare-Earth Chalcogenides

By G. Güntherodt and R. Merlin (With 25 Figures)	243
5.1 An Overview of the Properties of Rare-Earth Monochalcogenides	244
5.2 Semiconductors	249
5.2.1 Magnetic-Phase Dependent Scattering by Phonons in EuX (X=O, S, Se, Te)	249
5.2.2 Multiple Scattering by LO(<i>T</i>) Phonons in YbX (X=S, Se, Te)	256
5.3 Metals	258
5.3.1 Defect-Induced Scattering	259
5.3.2 Superconductors. The Model of Local Cluster Deformabilities	260
5.4 Semiconductor-Metal Transitions	262
5.4.1 Phonon Anomalies	263
5.4.2 Electronic Raman Scattering near Configuration Crossover	264
5.5 Intermediate Valence Materials	268
5.5.1 Phonon Anomalies and Raman Intensities	269
5.5.2 Metallic SmS	274
5.5.3 Bound Polaronic Charge Fluctuation Mode	275

5.6 Higher Rare-Earth Chalcogenides	277
5.6.1 Inhomogeneous Intermediate-Valence Materials	277
5.6.2 Miscellaneous Materials	280
5.7 Conclusions	281
References	282
6. Surface-Enhanced Raman Scattering: “Classical” and “Chemical”	
Origins. By A. Otto (With 91 Figures)	289
6.1 Background	289
6.2 The Phenomenon of Surface-Enhanced Raman Scattering (SERS), “Roughness” and Electromagnetic Resonance Effects	291
6.3 Classical Enhancement	299
6.3.1 Single-Particle Resonances	300
6.3.2 Collective Resonances	312
6.3.3 Resonances on Gratings, Rough Surfaces, and by Attenuated Total Reflection	317
6.3.4 Comments	323
6.4 Adsorbate-Surface Plasmon Polariton Interaction Compared to Adsorbate-Metal Electron Interaction	326
6.5 Is SERS Only an Electromagnetic Resonance Effect? Selected Relevant Experiments	332
6.5.1 Spacer Experiments	332
6.5.2 SERS from Regular Arrays of Silver Particles	335
6.5.3 Optical Properties and “Classical Enhancement” of Silver-Island Films	337
6.5.4 Optical Properties of “Cold-Deposited” Silver Films	347
6.5.5 Second Harmonic Generation from “SERS-Active” Surfaces	357
6.5.6 SERS from Colloids	360
6.5.7 Short-Range Effects in SERS	367
6.5.8 SERS on Metals of Low Reflectivity	373
6.5.9 Chemical Specificity of SERS	377
6.6 Indications for the Interaction of Metal Electrons with Adsorbates in SERS	383
6.7 Conclusion on “Classical Enhancement”	387
6.8 Charge-Transfer Excitations and SERS	389
6.9 Evidence for “SERS-Active Sites”	399
6.10 Relevance for Catalysis	409
Note Added in Proof	410
References	411
7. Theory of Surface-Enhanced Raman Scattering	
By K. Arya and R. Zeyher (With 15 Figures)	419
7.1 Background	419
7.2 Hamiltonian	422
7.3 Scattering Cross Section	424

7.3.1	General Expression	424
7.3.2	Scattering Cross Section in the Case of a Molecule with Two Electronic States	428
7.4	Local Field Effects Caused by a Bounded Metal	430
7.4.1	Plane Metal Surface with Roughness	432
	a) Weak Sinusoidal Grating	435
	b) Randomly Rough Surface	438
7.4.2	Sphere and Other Substrate Geometries	443
7.5	Local Field Effects Due to the Presence of a Molecule	450
7.6	Chemisorption Effects	456
7.7	Conclusions	460
