PREFACE	v
CHAPTER 1 The nature of spectroscopy and the spectroscopic method	1
CHAPTER 2 Far infrared spectroscopy with non-multiplex instruments	17
2.1. Submillimetre spectroscopy with prisms or gratings	17
2.2. Submillimetre spectroscopy with Fabry–Perot interferometers	23
2.3. Submillimetre spectroscopy using harmonic multiplication	27
CHAPTER 3 Theory of the Michelson interferometer	43
3.1. General theory	43
3.2. Resolution in a Michelson spectrometer	48
3.3. Apodization	50
3.4. Tilt adjustments in Michelson interferometers	53
3.5. Sampling theory and the phenomenon of aliasing	57
3.6. Discrimination and bandwidth restrictions	60
3.7. Beam divider operation	63
3.8. Thin-film interference in the beam divider	65
3.9. Thin dielectric films as beam dividers for Michelson interferometers	69
3.10. Polarization effects in Michelson interferometers	72
3.11. Spectral performance of Michelson interferometers	74
CHAPTER 4 The practice of interferometric spectroscopy in the submillimetre region	81
4.1. Commercial Michelson interferometers	81
4.2. Performance of submillimetre interferometers	101
4.3. Computational aspects	104
4.4. Lamellar grating interferometers	107
4.5. Refractive index determinations using Michelson interferometers	113
4.6. Amplitude and phase modulation of luminous flux	123
4.7. Submillimetre materials	127
4.8. Submillimetre polarizers and interference filters	135
4.9. Hybrid submillimetre spectrometers	137
4.10. Polarized interferometric spectroscopy	140
CHAPTER 5 Submillimetre physics	141
5.1. Pure rotational absorption of submillimetre waves	142
5.1.1. Energy levels	142
5.1.2. Selection rules	143
5.2. Intensities and line shapes in pure rotation spectra	149
5.3. Microwave and submillimetre absorption in non-polar gases at high pressure	157

5.4. Translational absorption by molecules trapped in clathrates	162
5.5. Submillimetre absorption in crystals	164
5.6. Submillimetre absorption in liquids	177
5.7. Submillimetre absorption in "plastic" crystals	187
5.8. Submillimetre absorption in polymers	190
5.9. Submillimetre aspects of molecular physics	198
5.10. Submillimetre waves in plasmas	207
5.11. Submillimetre absorption by electronic processes in insulating crystals	210
5.12. Submillimetre aspects of superconductivity	220
5.13. Properties of metals and semiconductors at submillimetre wavelengths	225
CHAPTER 6 Submillimetre masers and lasers and submillimetre aspects of non-linear phenomena	235
6.1. Theory of lasers	235
6.2. The HCN laser	241
6.3. The water-vapour laser	246
6.4. Mode patterns, frequency locking and the determination of the velocity of light	250
6.5. Practical details of submillimetre laser systems	260
6.6. Spectroscopy using submillimetre lasers	268
6.6.1. Spot-frequency determinations of optical constants	268
6.6.2. Cyclotron resonance measurements	270
6.6.3. Near coincidence spectroscopy and the Stark effect	275
6.6.4. Zeeman effects in rotational spectra	278
6.7. Power saturation and amplification at submillimetre wavelengths	283
6.8. The generation of submillimetre waves as difference frequency radiation in non-linear media	289
6.9. Miscellaneous submillimetre lasers	304
6.9.1. Noble gas lasers	304
6.9.2. Other vibration-rotation lasers	306
6.10. Far infrared chemical lasers	307
6.11. Optically pumped lasers	309
6.12. Direct generation of submillimetre waves by electrical stimulation of semiconductors	314
APPENDICES	
1. The treatment of multiple-beam interference by the method of complex amplitudes	317
2. Normal vibrations of crystals and long-chain molecules	321
3. Dielectric Theory	331
4. Optical constants of some materials at $29\cdot712\text{ cm}^{-1}$	341
5. Rotational perturbations in the CN radical	343
