CONTENTS

	Preface	xiii
	Acknowledgements	xv
1.	Introduction	1
	1.1 Gas discharge Species	1
	1.1.1 Neutrals	1
	1.1.2 Charged Particles	2
	1.1.3 Excited Species and Photons	2
	1.2 Interactions between Species	2
	1.3 Basic Characterization of Electrons	4
	1.3.1 Debye Shielding	6
	1.3.2 Plasma Frequency	7
	1.4 References	10
2.	Elementary Theory of a Gas Discharge	11
	2.1 The Langevin Equation	11
	2.2 Mobility, Conductivity and Dielectric Constant	12
	2.3 Energy Balance, Electron Temperature and Energy Relaxation	17
	2.4 References	19
3.	Collisions	20
	3.1 Cross Section, Mean Free Path and Collision Frequency	20
	3.2 Classical Scattering by a Central Force	24
	3.2.1 Electron-molecule Hard-sphere Collisions	27
	3.2.2 Coulomb Collision Scattering	29

3.2.3 Differential Scattering Cross Section 30
3.2.3.1 Hard spheres 31
3.2.3.2 Coulomb collisions 32
3.2.4 Scattering Cross Section 32
3.2.4.1 Total scattering cross sections 32
3.2.4.2 Cross section for momentum transfer 32
3.2.4.3 Hard spheres 33
3.2.4.4 Coulomb collisions 33
3.2.5 Attractive Potentials 35
3.3 Inelastic Collisions 38
3.3.1 Ionization 38
3.3.2 Electronic Excitation 40
3.3.3 Vibrational and Rotational Excitation of Molecules 41
3.3.4 Recombination 45
3.3.5 Attachment 45
3.4 References 47

4. Distribution Functions and the Boltzmann Equation 49
4.1 Averages and Collisional Rates 50
4.2 Equilibrium Distributions and Rates 51
4.2.1 Collisional Rates for a Maxwellian Distribution 53
4.2.2 Detailed Balance and Inverse Processes 55
4.3 The Boltzmann Equation 57
4.3.1 The Collision Integral 58
4.4 Expansion of the Boltzmann Equation for an Applied Electric Field 59
4.4.1 Expansion of the Collision Integral 61
4.4.1.1 Solution of the collision integral - first approximation 63
4.4.1.2 Solution of the collision integral - second approximation 63
4.5 Distribution Function for an Applied Electric Field - Elastic Collisions only 64
4.5.1 Constant Collision-Frequency Case 65
4.5.2 Constant Mean Free-path Case 65
4.6 Distribution Functions when Electron-Electron Collisions are Important 66

4.7 Distribution Functions when Inelastic Collisions Dominate 69
4.7.1 The Boltzmann Equation Including Inelastic Processes 69
4.7.2 The Distribution Function for Atomic Gases 70
4.7.3 The Distribution Function for Molecular Gases 72
4.7.4 Rate-process Calculations 75
4.8 Approximate Analytic Techniques for Determining Distribution Functions and Rates 75
4.8.1 Two and Three-electron Group Models 77
4.8.2 The "Upflux" Approach 85
4.8.2.1 Elastic losses 87
4.8.2.2 Inelastic losses 88
4.9 References 93

5. Transport Coefficients 95
5.1 Electrical Conductivity 95
5.2 Mobility 97
5.3 Diffusion 99
5.4 The Einstein Relation and Characteristic Energy 101
5.5 Corrections to the Langevin Equation 102
5.6 References 106

6. The Fluid Equations 108
6.1 The Continuity Equation 109
6.2 The Momentum-conservation Equation 110
6.3 The Energy-conservation Equation 111
6.4 References 113

7. Electron-density Decay Processes 115
7.1 Diffusion 116
7.1.1 Rectangular Geometry 117
7.1.2 Cylindrical Geometry 118
7.1.3 Spherical Geometry 119
7.1.4 Ambipolar Diffusion 120
7.1.5 Transition Diffusion 122
7.1.6 Diffusion in Multi-species Discharges 124
7.1.7 Diffusion Cooling 127

7.2 Recombination 128
7.2.1 Radiative Recombination 130
7.2.2 Three-body Recombination 130
7.2.2.1 Electron collisional radiative recombination 130
7.2.2.2 Neutral collisional radiative recombination 131
7.2.3 Dissociative Recombination 132
7.2.3.1 Recombination at higher pressures 135
7.2.4 Electron Temperature Dependence of Recombination 135
7.2.5 Electron Density Decay in Plasmas with Diffusion and Recombination 136
7.3 Attachment 137
7.3.1 Radiative Attachment 138
7.3.2 Dissociative Attachment 139
7.3.3 Three-body Attachment 139
7.4 References 141

8. DC Discharges - The Positive Column 144
8.1 Diffusion-dominated Discharges 144
8.1.1 Electron Temperature in the Diffusion-dominated Discharge 146
8.1.2 Longitudinal Electric Field in the Diffusion-dominated Discharge 147
8.1.3 Deviations from the Simple Theory 149
8.2 Attachment-and Recombination-dominated Discharges 153
8.3 Constriction and Instability of the Positive Column 156
8.4 References 159

9. Excited Species 161
9.1 Radiatively Decaying Species 162
9.2 Collisionally Decaying Species 162
9.2.1 The Neon ($1s_5$) Metastables Species 163
9.2.1.1 Neon metastables in the DC discharge 168
9.2.1.2 Neon metastable population in afterglow discharges 170
9.2.2 The Helium (2^3S) Metastable Species 172
9.2.2.1 Helium metastables in the DC discharge 173
9.2.2.2 Electron temperature decay in helium afterglow 176
9.3 References 178

10. Atomic Neutral Gas Lasers 180
10.1 The Laser Concept 180
10.1.1 Population Inversion and Gain 180
10.1.2 Small Signal Gain, Saturation Intensity and Amplitude of Oscillation 182
10.1.3 Power Available from a Laser Amplifier 184
10.2 The Helium-neon Laser 185
10.2.1 Rate Equations, Population Inversion and Gain 186
10.2.2 Similarity Laws for He-Ne Lasers 192
10.2.3 Cascade Interactions 194
10.3 Electron Collision-pumped Lasers 195
10.4 References 198

11. Ion Lasers 200
11.1 Metal Vapor Lasers 200
11.2 Rare-gas Ion Lasers 201
11.2.1 Argon Ion Lasers 202
11.3 References 208

12. Molecular Gas Lasers 210
12.1 Molecular Structure and Nomenclature 210
12.1.1 Rotation 211
12.1.2 Vibration 211
12.1.3 Vibration-rotation 212
12.1.4 Electronic Structure 212
12.2 The Molecular Nitrogen Laser 214
12.3 The Molecular Hydrogen Laser 220
12.4 CO_2 Lasers 222
12.4.1 Upper Laser-level Excitation Mechanisms 224
12.4.1.1 Direct electron-impact excitation 224
12.4.1.2 Electron-impact pumping of nitrogen and resonant energy transfer 224
12.4.1.3 Electron-impact pumping of CO and resonant energy transfer 226
12.4.2 Laser-level Relaxation Mechanisms 227
12.4.2.1 Radiative relaxation 227
12.4.2.2 Collisional relaxation 228

12.4.3 Electron Energy Distributions and Fractional Power Transfer 230
12.4.4 Laser Kinetics Model 233
12.5 Excimer Lasers 237
12.5.1 Rare-gas Excimers 239
12.5.2 Rare Gas-Monohalide Excimers 244
12.5.3 Mercury-Halide Lasers 248
12.6 References 248

Appendix A. Expansion of the Boltzmann Equation in Spherical Harmonics 254
