

# **Contents**

<b>Preface</b>	viii
<b>Acknowledgments</b>	x
<b>Chapter I Introduction</b>	1
References	6
<b>Chapter II Brief Review of Classical Electricity and Magnetism</b>	
2.1 Maxwell's Equations	9
2.2 Vector and Scalar Potentials	11
2.3 The Hertz Potential	12
References	14
<b>Chapter III Scattering Theory</b>	
3.1 General Expression for the Scattered Electric Field	16
3.2 Fourier Decomposition of Susceptibility Fluctuations	28
3.3 Intensity of Scattered Light	30
3.4 Spectrum of Scattered Light	45
References	63

**Chapter IV Light Mixing Spectroscopy**

4.1	Coherence Properties of the Scattered Electric Field	65
4.2	Photoelectric Detection of the Scattered Electric Field	78
4.3	Optical Mixing Spectrometers	91
	References	104

**Chapter V Interferometry**

5.1	General Consideration	106
5.2	Fabry-Perot Interferometer: General Characteristics	114
	References	120

**Chapter VI Photon-Counting Fluctuations**

6.1	Photocount Autocorrelation	121
6.2	Complementary Clipped Autocorrelation Function	127
6.3	Sampling Scheme of a Clipped Digital Correlator	128
6.4	Statistical Accuracy in the Digital Autocorrelation of Photon-Counting Fluctuations	132
6.5	Non-Gaussian Signal Statistics	138
6.6	Correlation of Scaled Photon-Counting Fluctuations	143
6.7	Uniform and Sequential Clipping	146
6.8	Design of an Ideal Digital Correlator	148
	References	150

**Chapter VII Experimental Methods**

7.1	Introduction	152
7.2	The Laser	153
7.3	The Optical System	159
7.4	Photon-Counting Technique	174
7.5	Current Detection	185
7.6	Fabry-Perot Interferometer	190
7.7	Data Analysis	195
	References	198

**Chapter VIII Macromolecules**

8.1	Basic Particle Scattering Theory	202
8.2	Translational Diffusion Coefficient	204
8.3	Rotational Diffusion Coefficient	219
8.4	Depolarization Ratio	224
8.5	Flexible Coils	226
8.6	Polydispersity	228

<b>Contents</b>	vii
8.7 Electrophoresis and Light Scattering	237
8.8 Scattering from Polymer Gels	242
8.9 Motile Microorganisms and Chemotactic Response	243
References	249
<b>Chapter IX Reaction Kinetics—Concentration Correlation Spectroscopy</b>	
9.1 Introduction	254
9.2 Simple Reaction Processes	255
9.3 Feasibility Considerations for Quasielastic Light Scattering	260
9.4 Concentration Correlation Spectroscopy	263
References	270
<b>Chapter X Anemometry</b>	
10.1 Introduction	271
10.2 The Doppler Model	273
10.3 Turbulent Velocities	275
10.4 Filter Model of Doppler Velocimeter	278
10.5 A Unified Analysis on Laser Doppler Velocimeters	283
References	289
<b>Chapter XI Critical Opalescence</b>	
11.1 Introduction	291
11.2 Fluid Systems	292
References	300
<b>Author Index</b>	303
<b>Subject Index</b>	311
