Preface	ix
---------	----

## Chapter I. The Electromagnetic Field Scattered by a System of Charges

I.1 Historical Introduction	1
I.2 The Electromagnetic Field Generated by a Distribution of Charges	4
I.3 Molecular Dipole Moment	12
I.4 The Analytic Signal	15
I.5 The Effective Dipole Moment	18
I.6 The Scattered Field	22

## Chapter II. The Scattered Field as a Random Variable

II.1 Ensemble Averages	27
II.2 The $N$ -Particle Distribution Function	29
II.3 The Hierarchy of Reduced Distribution Functions	31
II.4 Microscopic Distribution and Correlation Functions	35
II.5 The Power Spectrum of a Stochastic Variable	38
II.6 The Spectrum of the Scattered Light	40
II.7 Further Sources of Fluctuation for Scattered Light	44

### Chapter III. Macroscopic Approach to Scattering Theory

III.1	Microscopic and Macroscopic Points of View	49
III.2	The Spectrum of Light Scattered by Density Fluctuations	52
III.3	Comparison with the First-Order Microscopic Treatment	59
III.4	Microscopic Extension of the Einstein–Smolouchosky Formula	62
III.5	Usefulness and Limitations of the Macroscopic Treatment	67
III.6	The Spectrum of Light Scattered by Normal Liquids	71
III.7	Some Remarks on Light Scattering from Liquids near the Critical Point	80

### Chapter IV. Statistical Description of Electromagnetic Radiation

IV.1	General Remarks	85
IV.2	The Existence of Higher-Order Correlation Effects: A Brief Historical Survey	88
IV.3	Quantization of the Electromagnetic Field	92
IV.4	The Photon Detection Process	99
IV.5	The $n$ -Photon Detection Process	105
IV.6	The $P$ -Representation	106
IV.7	Photon-Counting Experiments	110
IV.8	Photon-Counting Distribution for Some Typical Fields	114

### Chapter V. Statistical Properties of Light Scattered by Fluids and Plasmas

V.1	The Role of Higher-Order Correlation Functions	119
V.2	Correlation Functions of Light Scattered by a Simple Fluid	121
V.3	Correlation Functions of the Scattered Field: Other Kinds of Measurements	126
V.4	Nature of the Information Contained in the Scattered Field	131
V.5	Statistical Behavior of the Scattered Field Observed with More Than One Detector	137
V.6	Scattering by a Stable Plasma	140
V.7	Intensity Correlation of Light Scattered by a Liquid Far from the Critical Point	147
V.8	Intensity Correlation of Light Scattered by a Fluid near the Critical Point	151
V.9	Self-Beating and Heterodyne Detections	154

**Chapter VI. Statistical Properties of Light Scattered by  
Small Particles**

VI.1	Introduction	159
VI.2	The Quasi-Elastically Scattered Field	161
VI.3	Scattering by an Ensemble of Particles	167
VI.4	Scattering by Particles Suspended in a Laminar Flow	171
VI.5	Scattering by Particles Undergoing Brownian Motion	176
VI.6	Scattering by Particles Suspended in a Turbulent Fluid	185
VI.7	Non-Gaussian Nature of the Scattered Radiation	194
VI.8	Light Scattering from a Small Number of Particles	198
VI.9	Further Examples of Non-Gaussian Scattered Light: Scattering by a Rough Surface and a Random-Phase Screen	204
