0.	Preface
1.	Fundamentals of the Interaction between Light Pulses and Matter
1.1	Elementary Radiation Processes
1.1.1	Spontaneous Emission.
1.1.2	Stimulated Emission
1.1.3	Absorption
1.1.4	Transition Probabilities in Thermal Equilibrium
1.1.5	Rate Equations
1.1.6	Inhomogeneously Broadened Transitions
1.2	Fast Processes in Matter
1.2.1	Internal Transitions and Relaxation Processes
1.2.2	Photochemical Reactions
1.2.3	Phase Relaxation Processes
1.3	Basic Equations for the Description of the Interaction between Light Pulses and Matter
1.3.1	Wave Equation
1.3.2	Quantum-Statistical Description of Atomic Systems.
1.3.3	Treatment of Two-Level Systems
2.	Fundamentals of Lasers for Ultrashort Light Pulses
2.1	The Laser Principle
2.2	Generation of Occupation Number Inversion by Optical Pumping
2.3	Optical Resonators
2.3.1	Open and Closed Resonators
2.3.2	Plane Fabry-Perot Resonator
2.3.3	Diffraction Theory of Open Resonators
2.3.4	Description of the Field Distribution Inside and Outside Laser Resonators by
	Means of Gaussian Beams
2.3.5	The Three-Mirror Resonator

2.4 2.4.1 2.4.2	Description of the Active Materials of some Important Lasers69Nd: YAG Lasers69Argon and Krypton Ion Gas Lasers71
$\begin{array}{c} 2.4.3\\ 2.4.4\end{array}$	Dye Lasers
2.5	<i>Q</i> -Switching of Lasers
2.6	The Principle for Generating Ultrashort Light Pulses: The Modelocking Technique 82
2.7 2.7.1 2.7.2 2.7.3	Methods of Modelocking       86         Active Modelocking       86         Synchronous Pumping       86         Passive Modelocking       86         Source       86         Passive Modelocking       86
2.8	Distributed Feedback Dye Laser
3.	Methods of Measurement ,
$\begin{array}{c} 3.1 \\ 3.1.1 \\ 3.1.2 \\ 3.1.3 \\ 3.1.4 \\ 3.1.5 \end{array}$	Basic Concepts for the Measurement of Fast Processes91Streak Technique91Stroboscopy, Sampling Technique92Measurement of Time Intervals as Spatial Displacements94Signal Conversion94Correlation Methods94
3.2 3.2.1 3.2.2 3.2.3 3.2.4 3.2.5	Limits for the Time Resolution97Rotating Mirrors99Photoelectric Detectors100Electron-Optical Streak Cameras102Focussing Systems102Dispersing Systems103
3.3 3.3.1	Nonlinear Optical Methods for Measuring Ultrashort Light Pulses       103         Measurement of the Intensity Correlation Function by Means of Second Harmonic       104         Generation       104
3.3.2	Measurement of the Intensity Correlation Function by Means of Two Photon Fluorescence
3.3.3 3.3.4	Measurement of Intensity Cross Correlation Functions       109         Laser-Controlled Optical Kerr Gates       100
3.4	Laser-Controlled Optoelectronic Shutter
4.	Active Modelocking
4.1 4.1.1 4.1.2 4.1.3	Principles of Operation       118         Amplitude Modulation       118         Phase Modulation       118         Homogeneously and Inhomogeneously Broadened Laser Transitions       119
4.2	Theory
4.3 4.3.1 4.3.2 4.3.3	Experimental Investigations       126         Modulators       126         Modelocked Noble Gas Ion Lasers       128         Experimental Investigations of Actively Modelocked Nd: YAG Lasers       128

10

5.	Synchronously Pumped Lasers
5.1	Principle of Operation.
5.2 5.2.1 5.2.2	Theory       132         Basic Equations       132         Discussion of the Solutions for the Steady-State Regime       132
5.2.2.1 5.2.2.2 5.2.2.3	Laser Threshold       142         Stable Pulse Regime (Modelocking Region)       143         Pulse Parameters       143
$\begin{array}{c} 5.2.3\\ 5.2.4\end{array}$	Evolution of Ultrashort Pulses from Noise and Formation of Satellite Pulses 144 The Formation of Phase Modulated Pulses
5.3 5.3.1 5.3.2	Experimental Set-ups and Results       150         Basic Design of Synchronously Pumped Lasers       150         Experimental Investigations of the Pulse Parameters of Synchronously Pumped       150         Lasers       150
$5.3.3 \\ 5.3.4$	Cavity Dumping   157     Amplification   157
6.	Passive Modelocking of Dye Lasers
6.1	Principle of Operation
6.2 6 2 1	Theory         161           Basic Fountions         161
622	Solutions for the Steady-State Regime
6.2.2.1	The Stable Single-Pulse Regime
6.2.2.2	Pulse Parameters
6.2.3	Influence of Coherent Interaction between Counterpropagating Pulses in Passive Modelocking 171
6231	Basic Equations
6.2.3.2	Solution of the Basic Equations for the Case of Resonance
6.2.3.3	Solution for the Case of Quasiresonant Conditions: Chirp Formation and Chirp Compensation 176
6.2.3.4	Influence of the Transverse Relaxation Time of Amplifier and Absorber 180
6.3	Experimental Set-ups and Results
6.3.1	Basic Design of Flashlamp Pumped Dye Lasers
6.3.2	Basic Design of CW Dye Lasers
6.3.3	Experimental Results
6.3.4	Counterpropagating Pulses
$\begin{array}{c} 6.3.5\\ 6.3.6\end{array}$	Hybrid Modelocking       189         Amplification       190
7.	Passive Modelocking of Solid State Lasers
7.1	Principle of Operation
7.2 7.2.1 7.2.2	Theory193Basic Equations193The Linear Stage of Pulse Formation (Region I)196
7.2.3	The Nonlinear Stage of Pulse Formation (Region II)

7.2.3.1 7.2.3.2 7.2.3.3 7.2.4	Neglect of the Occupation Change in the Amplifier	200 202 206 211
7.3 7.3.1 7.3.2 7.3.3 7.3.4 7.3.5 7.3.6	Experimental Set-ups and Results	<ul> <li>213</li> <li>213</li> <li>214</li> <li>216</li> <li>217</li> <li>220</li> <li>221</li> </ul>
7.4 8.	Semiconductor Lasers	222 225
8.1	Generation of the Second Harmonic	228
8.1 8.2 8.2.1 8.2.2 8.2.3 8.2.3 8.2.4 8.2.5	Application of Other Nonlinear Optical Processes for Frequency Conversion         Frequency Mixing         Optical Parametric Generation         Parametric Four Photon Interaction         Optical Rectification and Generation of Čerenkov Radiation         Stimulated Raman Scattering	228 234 234 236 238 239 242
8.3 8.3.1 8.3.2 8.3.3 8.3.4	Nonresonant Optical Processes for Controlling the Pulse Shape and Pulse DurationPulse Shaping through Nonlinear Optical InteractionsCompression of Phase Modulated Pulses in Linear Optical MediaPulse Propagation in a Nonlinear Optical Medium without DispersionDispersive Nonlinear Optical Media	<ul> <li>245</li> <li>245</li> <li>247</li> <li>251</li> <li>252</li> </ul>
8.4 8.4.1 8.4.2 8.4.3	Resonant Nonstationary Processes	256 256 259 261
9.	Ultrafast Spectroscopy	<b>2</b> 65
9.1 9.1.1 9.1.2 9.1.3 9.1.3.1 9.1.3.2 9.1.3.3 9.1.3.4	Fluorescence Measurements       .         Nanosecond Techniques       .         Picosecond Techniques       .         Applications       .         Dyes       .         Influence of the Orientational Relaxation       .         Biological Substances       .         Solids       .	266 268 270 270 272 274 274
9.2 9.2.1 9.2.1.1	Probe Pulse Spectroscopy	$274 \\ 274 \\ 276$

12

9.2.1.2	Probe Pulse Spectrometer with High Pulse Repetition Frequency
9.2.1.3	Probe Pulse Spectrometer for Measuring the Raman Gain
9.2.1.4	Probe Pulse Spectrometer Using Self-Induced Gratings
9.2.2	Application
9.2.2.1	Electronic Relaxation Processes
9.2.2.2	Vibrational Relaxation Processes
9.2.2.3	Selective Excitation
