

# CONTENTS

<b>FOREWORD</b>	v
<b>1 PHYSICAL PRINCIPLES OF THE LASER</b>	1
1. Introduction	1
2. Negative Absorption and Negative Temperature	2
3. Problems and Methods of Laser Theory	4
<b>2 RATE EQUATIONS FOR THE LASER</b>	9
1. Density Matrix for the Medium and the Field	9
2. Rate Equations in the Case of Luminescent Centers	12
3. Range of Validity of the Rate Equations	15
4. Rate Equations for Raman Scattering	23
<b>3 HOMOGENEOUS LASER WITH LUMINESCENT CENTERS</b>	29
1. Description of the System. Rate Equations	29
2. Steady-State Conditions. Criteria for the Generation of Laser Radiation	32
3. Dependence of Emission on Pumping	36
4. Generation Threshold for Laser Emission	41
5. Averaging Over Modes	47
6. Exact Normal Oscillations. Laser Line Width	51
<b>4 OPTIMUM CONDITIONS FOR THE GENERATION OF LASER RADIATION</b>	59
1. Formulation of the Problem. Basic Equations	59
2. Losses Corresponding to Maximum Generation	62
3. Density of Active Centers, Corresponding to Maximum Generation	73
4. Dependence of the Threshold Pumping Rate on the Active-Center Density	77
<b>5 INHOMOGENEOUS LASER WITH LUMINESCENT CENTERS</b>	81
1. Physical Consequences of Inhomogeneity. Basic Equations	81

2. Spatial Inhomogeneity. Weak Generation	82
3. Weak Spatial Inhomogeneity. Strong Generation	90
4. Model Involving Two Types of Center and Two Modes	95
<b>6 STABILITY OF THE STEADY STATE</b>	<b>101</b>
1. Homogeneous System	101
2. Model With Two Types of Center	106
3. Single-Frequency Oscillations	112
<b>7 DYNAMICS OF GIANT PULSES</b>	<b>117</b>
1. Formulation of the Problem and Method of Solution	117
2. Solution of the Equations. Conditions for Maximum Pulse	121
3. The Case of Large Initial Population Excess	127
4. The Case of Small Initial Population Excess	132
5. Optimum Conditions for Producing Giant Pulses	140
<b>8 HOMOGENEOUS SEMICONDUCTOR LASER IN THE ABSENCE OF EXCITONS</b>	<b>144</b>
1. Properties of Semiconductor Lasers	144
2. Generation Through Direct Band-Band Transitions in an Intrinsic Semiconductor	146
3. Free-Carrier Absorption	161
4. Direct Band-Band Transitions in Impurity Semiconductors	166
5. Indirect Band-Band Transitions in an Intrinsic Semiconductor	173
6. Generation Through Impurity-Band Transitions	184
7. Generation Through Impurity-Impurity Transitions	196
<b>9 SEMICONDUCTOR LASER IN THE CASE OF EQUILIBRIUM BETWEEN FREE CARRIERS AND EXCITONS</b>	<b>202</b>
1. Rate Equations. The Role of Excitons	202
2. Equilibrium Between Free Carriers and Excitons	204
3. Generation Through Indirect Exciton and Band-Band Transitions	207
4. Generation Through Direct Transitions	217
<b>10 LASER BASED ON RAMAN SCATTERING</b>	<b>229</b>
1. The Case of Given Pumping Rate	229
2. Line Width	235
3. Reaction of Raman Scattering on Exciting Laser	237
