

CONTENTS

DYNAMICAL STOCHASTICITY AND LASERS	1
A.N. Oraevskiy	
1. The Maser Attractor	1
2. The Phase Portrait of Trajectories Determined by Equations (6)	4
3. Universality and Routes to the Strange Attractor	7
4. Dimensionality of the Strange Attractor	14
5. Is There a Strange Attractor in Quantum-Mechanical Oscillators?	17
6. The Significance of Strange Attractors	31
Bibliography	32
A THEORETICAL ANALYSIS OF OXYGEN-IODINE CHEMICAL LASERS	37
N.G. Basov, M.V. Zagidullin, V.I. Igoshin, V.A. Katulin, N.L. Kupriyanov	
Introduction	37
1. Experimental Results	38
2. Singlet Oxygen Generators	40
3. Active Medium of the Oxygen-Iodine Chemical Laser	50
4. The Energy Characteristics of Oxygen-Iodine Chemical Lasers	60
Conclusion	65
Bibliography	66
THE THEORY OF ACTIVE MEDIA IN EXCIMER LASERS	72
A.G. Molchanov	
Chapter 1: Theory of Luminescence and Light Generation in Rare Gas Crystals	75
1. Excitons in the Absorption and Reflection Spectra of Rare Gas Crystals	75

2. Group-Theoretical Investigation of the Structure of Free Exciton Energy Levels	78
3. A Classification of Excimer States and Their Relation to Free Excitons	82
4. Potential Curves and the Excimer Luminescence Mechanism in Rare Gas Crystals	84
5. Generation of Excimer Emission in Condensed Media	91
Chapter 2: The Energy Distribution and Constants of Elementary Processes in Electric-Discharge Excimer Lasers	97
1. The Kinetic Equation Accounting for Electron-Electron Collision and Electron Attachment	97
2. Cross-Sections of Elementary Processes	101
3. Energy Distribution, Drift Velocities and Rate Constants of Inelastic Electron Collision	106
Chapter 3: The Ionization Instability of Electric Discharge in Excimer Lasers	110
1. Kinetic Processes in a Two-Component Rare Gas/Halogen Mixture	110
2. Development Time of Ionization Instability	111
3. Electric Discharge Stability Regions	114
4. Ionization Instability of Electric Discharge with Removal of the External Ionization Source	117
Chapter 4: Theory of Electron-Beam Excited KrF Laser	119
1. The Kinetic Processes in the Active Medium of a KrF Laser	119
2. The Characteristics of the Active Medium in the KrF Laser	127
3. A Method of Calculating the Amplified Spontaneous Emission and Parasitic Lasing in Wide-Aperture Optical Amplifiers	134
Conclusion	153
Bibliography	155
LASERS OPERATING AT THE CASCADE TRANSITIONS OF LINEAR TRIATOMIC MOLECULES	168
A.S. Biryukov, V.A. Shcheglov	
Introduction	168
1. The Features and General Operating Conditions of Cascade Gas Lasers	169

2. CO ₂ Cascade Lasers. Thermal Excitation	175
3. Cascade CO ₂ Gasdynamic Lasers in Mixing	188
4. Electric-Discharge and Electric Gasdynamic Cascade CO ₂ Lasers	194
5. A Chemical Cascade DF-CO ₂ Laser	208
6. Cascade Gasdynamic Lasers Employing Other Triatomic Molecules	211
7. A Three-Frequency Optical Feedback Intermittent- Pulsed CO ₂ Laser	215
Conclusion	218
Bibliography	219
THE THEORY OF RING QUANTUM-MECHANICAL OSCILLATORS IN A MAGNETIC FIELD OF ARBITRARY DIRECTION	224
E.G. Pestov	
Introduction	224
Chapter 1: Electric Polarization of Quantum Systems in a Magnetic Field of Arbitrary Direction	229
Chapter 2: Theory of Ring Quantum-Mechanical Oscillators In Single-Mode Lasing	238
Bibliography	275
SUBJECT INDEX	283
