

# CONTENTS

<b>Foreword</b>	v
<b>List of Contributors</b>	xi
<b>THE HEISENBERG PICTURE FORMALISM IN THE THEORY OF ATOM-RADIATION INTERACTIONS</b>	
J.H. EBERLY	
1. Introduction	1
2. Conceptual Directness of the Heisenberg Picture	3
3. Fundamental Relaxation Theory in the H Picture	7
4. Mean Values and Moments	12
5. Quantum Decay and Recorrelation	18
6. Multilevel Maxwell-Bloch Equations, and Simultons	21
7. Multi-photon Effects with Noisy Lasers	25
<b>ATOMIC SPECTROSCOPY: INTERACTION OF ATOMS WITH COHERENT FIELDS</b>	
D.T. PEGG	
1. Introduction	33
2. The Hamiltonian	33
3. Two-level Atom	38
4. Three-level Atom	50
5. Atom Irradiated by Two Fields at Different Frequencies	54
Appendix	58
<b>TIME DEVELOPMENT OF MULTIPHOTON EXCITATION</b>	
P.L. KNIGHT	
1. Introduction	63
2. Resonant Multiquantum Transitions: Perturbative Theory	64
3. Saturation and Multichannel Effects	72
4. Rabi Oscillations and AC Stark Splittings	88

## **LIGHT STATISTICAL PROPERTIES AND MULTIPHOTON TRANSITIONS**

P. ZOLLER

1. Introduction 99
2. Simple Models of Statistical Properties of Laser Radiation 101
3. Non-resonant Multiphoton Ionization 103
4. Saturated Bound-Bound Transitions in a Stochastic Field 104
5. Double Optical Resonance 106

## **STATISTICAL PROPERTIES OF LIGHT**

D.F. WALLS

1. Introduction 115
2. Representations of the Radiation Field 115
3. Photon Correlation Experiments 117
4. Examples 119
5. Summary 123

## **DEVELOPMENT OF NEW LASER SYSTEMS**

J.A. PIPER

1. Introduction 125
2. CW Metal Ion Lasers 127
3. Pulsed Metal Vapour Lasers 131
4. Rare Gas Halide Excimer Lasers 136
5. Metal Halide Excimer Lasers 141
6. Atomic Photodissociation Lasers 143
7. Optically Pumped Dimer Lasers 146
8. Conclusion 147

## **FREE-ELECTRON LASERS: AN INTRODUCTION**

P. MEYSTRE

1. Introduction 153
2. Basic Principles 155
3. Bunching, Recoil and Spread 162
4. Buckets, Echoes and More 170

**RECENT DEVELOPMENTS IN  
LIGHT BEATING SPECTROSCOPY**

J.D. HARVEY

1. Introduction	177
2. General Considerations	178
3. Experimental Aspects	179
4. Measurement of Diffusion Coefficients	180
5. Studies of Motile Micro-organisms	183
6. Electrophoresis	185
7. Scattering from Gel Systems	186

**AN INTRODUCTION TO THE MEAN FIELD THEORY OF  
SUPERFLUORESCENCE WITH TRAVERSE EFFECTS**

L.M. NARDUCCI AND J.D. FARINA

1. Introduction	189
2. An Elementary Model of Collective Emission	190
3. The Bonifacio-Lugiato MFT Model	192
4. Axial Mean Field Theory	203
5. The Experimental Situation	206
6. Theoretical Analysis of Transverse Effects	211
Appendix	219

**EXPERIMENTS ON OPTICAL BISTABILITY**

W.J. SANDLE

1. Introduction	225
2. The Two-level Constant Field Model	229
3. The Experiment	232
4. Results and Discussion	232
5. Conclusions	237

**COLLISIONAL REDISTRIBUTION OF LASER RADIATION**

J. COOPER

1. Introduction	241
2. Equations of Motion for the Density Matrix: Total Intensities	248
3. Equation of Motion for the Correlation Function and the Scattered Spectrum	266
4. Conclusions	272

**INDEX**
