## OPTICAL RESONATORS

*A.E. Siegman*

1. Introduction to Optical Resonators	45
1.1 Introduction	
1.2 Transverse Modes in Optical Resonators	45
1.2.1 The "Recirculating Pancake" Approach	46
1.2.2 Equivalent Periodic Lensguide Model	47
1.2.3 The Round-Trip Propagation Integral	47
1.2.4 Optical Resonator Eigenmodes and Eigenvalues	48
1.2.5 The Eigenequation for Optical Resonator Modes	49
1.2.6 Existence of Resonator Eigenmodes	50
1.2.7 Resonator Losses	51
1.2.8 Mode Orthogonality	51
1.2.9 Axial Versus Transverse Resonator Modes	52
1.3 Transverse Mode Build-up and Oscillation	53
1.3.1 The Lowest-Loss Eigenmode	53
1.3.2 The Fox and Li Approach	54
1.3.3 Transverse Mode "Beats"	56
1.3.4 Resonator Eigenfrequencies	57
1.3.5 Conclusions	58
1.3.6 References on Optical Resonator Modes	59
2. Optical Rays and Periodic Focusing Systems	
2.1 Introduction	60
2.2 Paraxial Optical Rays and Ray Matrices	60
2.2.1 Optical Rays and Ray Matrices	60
2.2.2 Cascaded Ray Matrices	61
2.2.3 Ray Matrices in Astigmatic Systems	62
2.2.4 Rays in Ducts	62
2.2.5 Stable Quadratic Ducts	63
2.2.6 Unstable Quadratic Ducts	64

## COLLECTIVE PHENOMENA IN QUANTUM OPTICS

*F.T. Arecchi*

Outline	103
Introduction	104
1. Physics of Stimulated Emission Processes	107
1.1 <i>Stimulated emission and the laser condition</i>	107
1.2 <i>Stimulated emission and nonlinear optics</i>	114
1.3 <i>Practical lasers</i>	116
2. What is Quantum and What is Classical in Laser Physics ?	120
2.1 <i>The interaction model: passage from individual to collective operators and semiclassical approximation</i>	120
2.2 <i>The coherent state representations</i>	122
2.2.1 <i>Field coherent states</i>	122
2.2.2 <i>Atomic coherent states</i>	125
2.3 <i>The Maxwell-Bloch equations. A survey of quantum optical phenomena</i>	126

2.3.1	<i>Coupling of atoms and field</i>	126
2.3.2	<i>Irreversible processes in the presence of dampings</i>	131
	<i>Single-Mode Laser</i>	134
	<i>Optical Bistability</i>	134
	<i>Laser with Saturable Absorber</i>	136
3.	<b>Statistical Dynamics of Non-Equilibrium Systems</b>	137
3.1	<i>Stochastic variables and correlation functions</i>	138
3.2	<i>Markov processes - the Fokker-Planck equation</i>	138
3.3	<i>The nonlinear Brownian motion. Analogus with phase transitions</i>	142
4.	<b>Photon Statistics and the Laser Threshold</b>	147
4.1	<i>The Photon Statistics</i>	147
4.2	<i>Fluctuations and coherence at laser threshold</i>	150
4.3	<i>A new phenomenon: anomalous transient laser fluctuations</i>	153
5.	<b>Turbulence and 1/f Noise in Quantum Optics</b>	156
5.1	<i>Nonlinear dynamic systems and turbulence</i>	156
5.2	<i>Coexistence of many attractors (multistability) and 1/f noise.</i>	161

#### LASER NOISE, MODES AND SPECTRA

A. Yariv

	Laser as a regenerative amplifier	167
	Spontaneous emission	168
	Effect of spontaneous emission on threshold	169
	Total "power" in a mode	172
	Spectral width of output	173

#### VISIBLE AND UV GAS LASERS

C.E. Webb

1.	<b>Introduction</b>	175
2.	<b>Atomic Lasers I : He-Ne Lasers</b>	177
2.1	<i>Mechanisms</i>	177
2.2	<i>Practical aspects</i>	179
2.3	<i>Power limitations</i>	180

3. Atomic Lasers II : Copper Vapour Lasers	182
3.1 <i>Mechanisms</i>	182
3.2 <i>Practical Aspect</i>	184
3.3 <i>Scaling</i>	185
3.4 <i>Applications</i>	186
4. Ion Lasers I : Argon Ion Lasers	186
4.1 <i>Mechanisms</i>	186
4.2 <i>Scaling</i>	189
4.3 <i>Practical Aspects</i>	190
4.4 <i>Applications</i>	192
5. Ion Lasers : Cadmium Ion Lasers	192
5.1 <i>Mechanisms</i>	192
5.2 <i>Scaling</i>	194
5.3 <i>Practical Aspects</i>	195
5.4 <i>Applications</i>	196
6. Ion Lasers III: Charge Transfer Excited Systems	196
7. Excimer Lasers I: Rare-Gas Excimer Lasers	198
7.1 <i>Principles</i>	198
7.2 <i>mechanisms</i>	200
7.3 <i>Practical Aspects</i>	201
7.4 <i>Scaling</i>	202
8. Excimer Lasers II: Rare Gas Halide Lasers	203
8.1 <i>Mechanisms</i>	203
8.2 <i>Practical Aspects</i>	205
8.3 <i>Scaling</i>	209
8.4 <i>Applications</i>	210
References	211
<b>SPECTRAL PROPERTIES OF SEMICONDUCTOR DIODE LASERS</b>	
<i>A. Mooradian</i>	
1. Introduction	213
2. Linewidth broadening mechanisms	213
a. Power Dependent Broadening	213
b. Power Independent Broadening	217

3. Experimental Linewidths	218
4. External Cavity (GaAl)As Lasers	225
5. References	234

## GAS LASER DISCHARGES

*A.L.S. Smith*

1. Laser Discharge Pumping	235
1.1 <i>Mostly molecular kinetics</i>	235
1.2 <i>Modelling Electron Kinetics</i>	240
2. The Diffuse Discharge	243
2.1 <i>Uniform Glow Discharge</i>	243
2.2 <i>Discharge limitations to laser performance</i>	251
2.3 <i>Discharge breakdown and the role of preionisation</i>	252
3. Plasma Chemistry	260
3.1 <i>Neutral processes in cw CO<sub>2</sub> discharges</i>	260
3.2 <i>TE discharges and other systems</i>	264
3.3 <i>Negative-ion effects and discharge stability</i>	266
References	267
Background Reading	269

## DYE LASERS

*F.P. Schafer*

1. Introduction	271
2. General Properties of Organic Dyes	273
2.1 <i>Light Absorption by Organic Dyes</i>	275
2.2 <i>Light Emission by Organic Dyes</i>	279
2.3 <i>Radiationless Deactivation of Organic Dyes</i>	282
2.4 <i>A survey of Laser Dyes</i>	288
3. Laser-Pumped Pulsed Dye Lasers	291
3.1 <i>Oscillation Condition</i>	292
3.2 <i>Practical Pumping Arrangements</i>	294
4. Flashlamp-Pumped Dye Lasers	296
4.1 <i>Practical Pumping Arrangements</i>	297

5. Continuous-Wave Dye Lasers	299
6. Wavelength-Selective Resonators for Dye Lasers	300
7. Dye Laser Amplifiers	306
8. Mode-Locking of Dye Lasers	308
9. Special Forms of Dye Lasers and Outlook	310
References	312
OPTICALLY PUMPED SEMICONDUCTOR PLATELET LASERS	
<i>Michael M. Salour</i>	
Introduction	315
1. Semiconductor Lasers	315
2. Optically-pumped semiconductor Lasers: continuous wave	316
3. Synchronous mode-locking	319
4. Compensation of group dispersion in fibres using GaAs	321
References	325
XUV AND X-RAY LASERS	
<i>G.J. Pert</i>	
1. Introduction	327
1.1 <i>Fundamental Problems - Pumping and Materials</i>	327
2. Non-Plasma Systems	332
2.1 <i>Inner Shell Excitation</i>	332
2.2 <i>Electron Channelling</i>	334
3. Plasma Systems	335
3.1 <i>Collisional Excitation</i>	335
3.2 <i>Photo-Excitation</i>	337
3.3 <i>Charge Exchange Pumping</i>	337
3.4 <i>Recombination Lasers</i>	338
4. Future prospects	342
References	344

## RYDBERG ATOM MASERS

*L. Moi, C. Fabre, S. Haroche*

Introduction	347
1. General Characteristics of Rydberg Atom Masers	348
1.1 Outlook of Main Rydberg Atom Properties	348
1.2 Experimental set-up	351
<i>Excitation and detection of Rydberg atoms</i>	351
<i>Resonant millimetric cavities</i>	354
<i>Rydberg maser detection</i>	354
1.3 Experimental study of some Rydberg atom maser characteristics	357
<i>Wavelengths</i>	357
<i>Competition effects</i>	357
2. Study of the Temporal Evolution	359
2.1 Introduction	359
<i>Analogies and differences with "usual" laser systems - orders of magnitude</i>	359
<i>Description of the theoretical model</i>	360
2.2 Equations of motion	361
<i>Bloch equation for one atom</i>	361
<i>Bloch equation for N atoms</i>	362
<i>Electromagnetic energy conservation</i>	363
<i>General equation of motion</i>	363
<i>Final and initial state of the evolution</i>	363
2.3 Evolution in the small active volume case	365
<i>Oscillatory regime: <math>T_R \ll T_{cav}</math></i>	366
<i>Overdamped regime: <math>T_R \gg T_{cav}</math></i>	366
<i>Connection with superradiance</i>	367
2.4 Evaluation of maser thresholds	369
3. Study of the Initial Stage and Fluctuations	370
3.1 Introduction	370
3.2 Calculation of the maser emission fluctuation statistics	371
<i>Initial stage (linear regime)</i>	371
<i>Final stage of the evolution</i>	373
<i>Statistics of the emitted photons</i>	374

3.3	<i>Experimental study of the maser emission statistics</i>	375
3.4	<i>Triggering by an external field</i>	377
	<i>Effect on the photon statistics</i>	377
	<i>Effect on the maser signal phase and polarisation</i>	378
3.5	<i>General conclusion</i>	380
	References	381

#### OPTICALLY PUMPED MOLECULAR LASERS

*T.Y. Chang*

1.	Introduction	383
2.	Pump Lasers	384
3.	Vibrational Difference-Band Lasers	385
4.	Vibrational Hot-Band Lasers	386
5.	Vibrational Fundamental-Band Lasers	387
