## Part A Laser Isotope Separation

1 Laser Isotope Separation Overview

Keith Boyer

A review of the needs for separation of heavy, medium and light weight isotopes in historical perspective. A survey of laser isotope separation methods.

2 The ERDA Laser Isotope Separation Program 11

George W. Rhodes

A survey of the demand and economics motivating the ERDA isotope separation program.

3 Selective Photochemical Reactions and Excited State Energy Transfer 17

Stephen R. Leone

Experimental studies of isotopically specific reaction kinetics, energy transfer rates and scrambling through isotope exchange in *HCl* and bromine systems.

- Part B Molecular Physics for Laser Isotope Separation
  - 4 Experimental and Theoretical Studies of Laser Isotope Separation

Jack P. Aldridge, III, John H. Birely, Cyrus D. Cantrell, III, David C. Cartwright

A review of recent work at laboratories in the USSR, the United States and elsewhere.

5 Applications of Raman Spectroscopy to Molecular Physics 145

Charles T. Walker

An introduction to the basic ideas of molecular physics. How Raman scattering and optical absorption get at the physics of molecules.

343

6 Comments on the Role of Symmetry Principles in Molecular Spectroscopy 197

Cyrue D. Cantrell, III

How symmetry principles help us understand energy levels and fine structure of vibration-rotation transitions in spherical-top and symmetric-top molecules.

- Part C Tunable Lasers Sources for Laser Isotope Separation
  - 7 Tunable Infrared Lasers and Their Applications to Molecular Resonance Processes 271

Max Garbuny

A survey of tunable lasers.

8 Spin-Flip Nonlinearities in Semiconductors 305 Peter A. Wolff

A review of those nonlinear optical properties of electrons in semiconductors which involve spin motion.

9 Spin-Flip Lasers: Experimental 325 James F. Scott

A review of experimental spin-flip work since 1973.

10 The \$30 Dye Laser

James G. Small

A simple nitrogen laser, constructed using 100 year old technology, can optically pump laser dyes. Constructive details are given.

- Part D Light Scattering and Spectroscopy
  - 11 A Dynamic Droplet Model Description of Light Scattering Experiments on Critical Fluids 355

W.J. O'Sullivan, C.M. Sorensen, B.J. Ackerson, R.C. Mockler

A new way of interpreting results of light scattering on critical fluid systems. How light scattering experiments probe the dynamical behavior of critical fluids.

12	ultiple Light Scattering Experiments from	
	ense Optical Systems	

L.M. Narducci, P.C. Colby

Results of recent experiments on light scattering from submicron dielectric spheres moving in Brownian motion in distilled water.

- Part E More
  - 13 Notes on the Use of Density Matrices in Quantum Electronics 403

Willis E. Lamb, Jr.

The use of the density matrix for some simple problems.

14 QED and Proposed Alternatives 421

Joseph H. Eberly

What theory of electrodynamics is closest to being right? My own choice is QED, but I think that, even though it gives apparently correct predictions for all experiments it has been applied to, it is not a well theory.

15 The Nonuniform Fields and Superradiance 447

Jamal I. Manassah

Can superradiance actually be realized in a small sample of size  $V \sim \lambda^3$ ? The question is prompted by the observation that atom-atom interactions may wash-out collective phenomena.
