

Contents

| | |
|------------------------------|-----|
| Preface | vii |
| List of Contributors | ix |
| Contents of Volume 1, Part B | xi |

1. General Introduction

N. Bloembergen

| | |
|--------------------------|---|
| I. Historical Background | 1 |
| II. The Present Volume | 4 |
| III. Future Outlook | 5 |
| References | 6 |

Part I. NONLINEAR OPTICAL SUSCEPTIBILITIES

2. Theory of Nonlinear Optical Susceptibilities

Christos Flytzanis

| | |
|-------------------------------------------------------|-----|
| I. Introduction | 9 |
| II. Macroscopic Theory of Optical Susceptibilities | 12 |
| III. Microscopic Theory of Nonlinear Susceptibilities | 74 |
| IV. Conclusion. Nonlinear Spectroscopy | 191 |
| Appendix 1. Perturbation Theory | 192 |
| Appendix 2. Multipole Expansion | 195 |
| Appendix 3. The Genkin-Mednis Approach | 197 |
| References | 199 |

3. Measurement of Nonlinear Optical Susceptibilities

Stewart K. Kurtz

| | |
|------------------------------------|-----|
| I. Introduction | 209 |
| II. Experimental Fundamentals | 217 |
| III. Second-Order Polarizabilities | 230 |
| IV. Conclusion | 277 |
| References | 278 |

Part II. NONLINEAR OPTICAL PROCESSES**4. Two-Photon Absorption Spectroscopy***H. Mahr*

| | |
|-----------------------------|-----|
| I. Introduction | 286 |
| II. Theory | 290 |
| III. Experimental Apparatus | 328 |
| IV. Experimental Results | 337 |
| References | 356 |

5. Stimulated Mandelstam–Brillouin Process*I. L. Fabelinskii*

| | |
|-----------------------------------------------------------------------------------------|-----|
| I. Introduction | 364 |
| II. Experimental Observation of the Stimulated Mandelstam–Brillouin Process | 368 |
| III. Theory of Stimulated Mandelstam–Brillouin Process | 387 |
| IV. Quantitative Experimental Studies of the Stimulated Mandelstam–Brillouin Process | 404 |
| References | 414 |

6. Spontaneous and Stimulated Parametric Processes*C. L. Tang*

| | |
|----------------------------------------------------------------------|-----|
| I. Introduction | 419 |
| II. Theory | 426 |
| III. Properties of the Spontaneous Emission and Experimental Results | 434 |
| IV. Applications | 444 |
| References | 446 |

7. The Stimulated Raman Process*Chen-Show Wang*

| | |
|----------------------------------------------------------------------------|-----|
| I. Introduction | 447 |
| II. General Description of the Stimulated Raman Process | 448 |
| III. Theory of Transient Stimulated Raman Scattering | 455 |
| IV. Experimental Observations on the Transient Stimulated Raman Scattering | 465 |
| References | 471 |
