

CONTENTS

Basic Notation	1
Chapter I. Certain Information from Luminescence Theory	5
§ 1. Absorption and Luminescence Spectra of Impurity Luminophors	5
§ 2. Nonradiative Transitions Between Electronic Levels of an Impurity Atom	14
§ 3. Nonradiative Energy Transfer Between Impurity Atoms	17
Conclusions	22
Chapter II. The Threshold and Output Power of a Laser	23
§ 4. The Effective Absorption Coefficient.	23
§ 5. The Threshold Pumping Power	26
§ 6. The Output Radiation Power of a Laser.	30
Conclusions	38
Chapter III. The Natural Oscillations of an Ideal Resonator (Linear Theory)	39
§ 7. The Oscillation Modes of a Closed Resonator	39
§ 8. The Modes of an Open Resonator	41
Conclusions	48
Chapter IV. The Transverse Structure of the Electromagnetic Field in a Plane-Parallel Resonator	49
§ 9. The Equation for the Electromagnetic Field	50
§ 10. The Field Distribution over a Cross Section Having the Shape of a Half-Plane	54

§ 11. The Intensity Distribution over a Cross Section Having Finite Dimensions	57
§ 12. The Diffraction Losses	61
§ 13. The Range of Application of the Treatment, Comparison with Experiment	63
Conclusions	65
Chapter V. Longitudinal Structure of the Electromagnetic Field in a Plane-Parallel Resonator.	67
§ 14. The Longitudinal Mode of a Resonator Having an Infinite Cross Section	68
§ 15. The Number of Simultaneously Generated Longitudinal Modes	70
§ 16. The Electromagnetic Field in a Resonator Having a Finite Cross Section	75
§ 17. The Effective Absorption Coefficient	79
Conclusions	80
Chapter VI. A Laser with Concave Reflectors	81
§ 18. The Equivalent Mechanical System.	81
§ 19. Taking Account of the Active Medium	86
§ 20. Cylindrical Mirrors	87
§ 21. Reflectors in the Shape of a Surface of Rotation	89
§ 22. The Spectral Composition of the Radiation.	92
§ 23. The Transition to a Resonator with Plane Mirrors	95
§ 24. An Optical Resonator with Lenses	97
Conclusions	99
Chapter VII. Relaxational Intensity Oscillations	101
§ 25. The Kinetic Equations	101
§ 26. The General Picture of Oscillations of Stimulated Emission	106
§ 27. Oscillations Having a Large Amplitude	108
§ 28. Damping of Oscillations and Their Amplitudes	114
§ 29. Range of Applicability and Experimental Data	117
§ 30. Self Oscillations	120
Conclusions	123

Chapter VIII. The Spectral Width of the Radiation	125
§ 31. The Spectral Composition of the Radiation	125
§ 32. The Effect of Kinetic Operation on the Spectral Width of the Generation	133
Conclusions	139
Chapter IX. The Threshold Phenomena Related to Microinhomogeneity of the Active Medium.	141
§ 33. Spectral Width of Radition from a Laser with an Inhomogeneously Broadened Luminescence Line. The Basic Equations.	145
§ 34. The Spectral-Broadening Threshold.	147
§ 35. The Equation for the Intensity of the Polarization Components	151
§ 36. The Second Generation Threshold	153
§ 37. The Intensity of the Fundamental Component under Conditions when the Second Component Cannot Be Generated.	156
§ 38. The Degree of Polarization of the Radiation	158
§ 39. Comparison with Experimental Data	159
Conclusions	160
Chapter X. Active Q-Modulation.	163
§ 40. Obtaining a Single Pulse by Means of Rapid Q-Switching	163
§ 41. Equations for Light Energy in a Resonator with Modulated Q	166
§ 42. Shape of the Intensity Peak	168
§ 43. Effect of a Finite Q-Switching Rate and Pump Nonuniformity on the Shape of the Peak . .	170
§ 44. Stimulated Intensity Oscillations	177
Conclusions	182
Chapter XI. Passive Q-Modulation	183
§ 45. The Mechanism of Passive Q-Modulation	183
§ 46. The Equation for a Passive Optical Shutter	186
§ 47. A Passive Shutter Open Either Negligibly or Completely	188

§ 48. Various Operating Modes of a Laser with a Passive Shutter	192
Conclusions	199
Chapter XII. Mode Locking and Ultrashort Pulses	201
by Richard A. Phillips	
§ 49. The Electric Field of a Multimode Laser	201
§ 50. Forced Mode Locking	204
§ 51. Self Mode Locking	206
§ 52. Pulse Velocity Inside the Cavity	209
Conclusions	211
References	213
Index	219
