

Contents

1.	Introduction and Background	1
2.	Noise and Quantum Considerations	10
3.	Information Theory Aspects	77
4.	Receiving Techniques	98
5.	Receiving Devices	131
6.	Modulation Techniques	207
7.	Background Energy Considerations	254
8.	Transmission Medium Effects	281
9.	Optical Components and Concepts	300
10.	System Considerations and Configurations	320
11.	The Future of Laser Information Systems	381
Appendices		
A.	Poisson Tables	387
B.	A Short List of Astronomical and Physical Constants	393
C.	Response, Sampling and Pulse Times	394
D.	A Short Glossary of Terms in Electro-optics	396
	Index	401
